LETTER OF TRANSMITTAL

OFFICE OF IOWA STATE DEPARTMENT OF
AGRICULTURE.

Des Moines, Iowa, July 1, 1922.

To His Excellency, N. E. Kendall, Governor of Iowa:

Sir: I have the honor to transmit herewith the Twenty-second Annual Iowa Year Book of Agriculture for the year 1921.

ARTHUR R. COREY,
Secretary State Board of Agriculture.

INTRODUCTORY

The true value of this Iowa Year Book of Agriculture can hardly be grasped except in the light of the twenty-one volumes which have preceded it.

Taken as a single unit this book gives a clear and concise cross section of all the activities and achievements of the farmers in what is now the greatest agricultural state in the Union. Taken as a group, the twenty-two volumes tell a wondrous story of the rise of a great people—the development of these trackless rolling prairies into the most fertile lands upon the face of the globe.

The mere contrast of figures from these seemingly dull pages points new vision to the still greater future and more abundant prosperity which lie ahead for Iowa, "Land of Plenty."

STATE BOARD OF AGRICULTURE

1922

EX-OFFICIO MEMBERS

N. E. KENDALL, <i>Governor of State</i>	Des Moines
R. A. PEARSON, <i>President Iowa State College</i>	Ames
R. G. CLARK, <i>State Dairy Commissioner</i>	Des Moines
PETER MALCOLM, <i>State Veterinarian</i>	Des Moines

OFFICERS

C. E. CAMERON, <i>President</i>	Alta
J. P. MULLEN, <i>Vice President</i>	Fonda
A. R. COREY, <i>Secretary</i>	Des Moines
F. E. SHELDON, <i>Treasurer</i>	Mt. Ayr

DISTRICT OFFICERS

<i>First District</i> —H. O. WEAVER.....	Wapello
<i>Second District</i> —E. T. DAVIS.....	Iowa City
<i>Third District</i> —EARL FERRIS.....	Hampton
<i>Fourth District</i> —E. J. CURTIN.....	Decorah
<i>Fifth District</i> —CYRUS A. TOW.....	Norway
<i>Sixth District</i> —T. C. LEGOE.....	What Cheer
<i>Seventh District</i> —C. F. CURTISS.....	Ames
<i>Eighth District</i> —J. C. BECKNER.....	Clarinda
<i>Ninth District</i> —C. E. HOFFMAN.....	Atlantic
<i>Tenth District</i> —SEARS MCHENRY.....	Denison
<i>Eleventh District</i> —H. L. PIKE.....	Whiting

The President, Vice President, Secretary and Treasurer are elected for one year.

Terms of the Directors for odd numbered districts expire second Wednesday in December, 1923. Terms of Directors for even numbered districts expire second Wednesday in December, 1922.

Total value of farm products and live stock.....\$846,565,429

*For grain only; does not include approximately 40,000 acres used for pasture.

PART I

Synopsis of Proceedings of the Iowa State Board of Agriculture and Executive and Special Committee Meetings for the Year 1921.

SPECIAL COMMITTEE MEETING

Sioux City, Ia., January 4, 1921.

The committee, consisting of Cameron, Mullen, Curtin and Corey, met at Sioux City with representatives from Minnesota and South Dakota State Fairs and the Sioux City Interstate Fair for the purpose of forming the Iowa-Minnesota and South Dakota Racing Circuit, and to arrange the speed programs. The committee also met with the Northwest Iowa County Fair Racing Circuit Tuesday evening.

EXECUTIVE COMMITTEE MEETING.

January 6, 1921.

Members present, Cameron and Corey.

The purpose of the meeting was to meet with a committee consisting of Major E. E. Lambert, Colonel Guy S. Brewer and Lieut. Colonel Cornell, representing the Adjutant General's office, to discuss the possibility of using a part of the horse barns on the state fair grounds for quartering one or two companies of cavalry; also quarters for officers and men.

The committee was taken to the fair grounds and shown the horse barns and quarters that might be available for the men, should a satisfactory arrangement be made with the board for the use of same.

The executive committee also attended the Iowa Polled Hereford Breeders' sale in the new sale pavilion, this being the first sale held in the new sale pavilion.

EXECUTIVE COMMITTEE MEETING.

January 12-13, 1921.

Committee met with Cameron, Mullen and Corey present.

The committee visited the fair grounds and checked up the work on the sale ring.

The committee directed the superintendent of grounds to have the city piped to the dining room in the new cattle barn, and to install hot water boiler and range.

The committee authorized payment of bills.

MEETING OF THE STATE BOARD OF AGRICULTURE.

February 1, 1921.

The meeting was called to order at 10:30 a. m. by President Cameron. The following members responded to roll call: C. E. Cameron, J. P. Mullen, A. R. Corey, W. W. Morrow, H. O. Weaver, E. T. Davis, E. M. Reeves, E. J. Curtin, C. A. Tow, C. F. Curtiss, F. E. Sheldon, Sears McHenry and H. L. Pike.

Mr. B. W. Garrett, Clerk of the Supreme Court, administered oath of office to Mr. T. C. Legoe as director of the State Board of Agriculture from the sixth district.

The secretary read the minutes of the board and committee meetings, commencing with the minutes of the State Agricultural Convention held on December 8th and concluding with the executive committee meeting on January 12-13. On motion, the minutes were approved as read.

Dr. Peter Malcolm, State Veterinarian, appeared before the board and explained the effect of rule 18, adopted by the Animal Health Commission. Rule 18 reads as follows:

Iowa State Fair and Exposition—Cattle Department.

All cattle presented for exhibition at the Iowa State Fair, or at any fairs held within the State of Iowa shall be either from a tuberculosis-free accredited herd or they shall have passed a satisfactory tuberculin test and found to be free from tuberculosis not more than ninety days prior to the opening date of exhibition at such fairs.

Mr. Mullen moved that this rule be published in the regular premium list, preceding the cattle department. Second by Mr. Tow. Motion carried.

The matter of appropriations to be asked of the Thirty-ninth General Assembly was discussed by the board. The secretary presented an itemized statement, showing that the cost of the new cattle barn to date and the necessary amount to pay the balance on the cattle barn and to install window regulators and ladies' toilets, amounted to \$212,532, or \$62,532 in excess of the state appropriation. Also a statement showing that the forty acres of additional land purchased during the year 1919 for the addition to the state fair grounds cost \$58,513 or \$4,513 in excess of the state appropriation. Also a statement showing the amount of the city assessment for grading, paving, opening East University Avenue and oiling Dean Avenue, for the years 1919 and 1920. This statement showed the total assessment to be \$23,774. Of this amount, \$8,701 had been paid from state appropriation by the Thirty-eighth General Assembly, leaving a balance due of \$15,073. These matters were discussed at length and it was the opinion of the board that the Thirty-ninth General Assembly should be asked to reimburse the department for the state fair funds invested in the cattle barn and also the additional land. They were also of the opinion that the General Assembly should be asked to appropriate a sufficient amount to take care of the city assessment for paving, etc., assessed against the state fair grounds. The item of \$2,960 assessed

against the state fair grounds for opening East University Avenue was discussed. Inasmuch as this improvement does not abut upon the state fair grounds, the board questioned whether the state had the right or had established the policy of paying such assessments. The board was of the opinion that if East University Avenue was opened from East Ninth Street to the state fair grounds that the state fair grounds would be one of the big benefactors in the improvement and should pay a reasonable assessment for same.

Mr. McHenry moved that the executive committee confer with the attorney general and ascertain what attitude the state has taken regarding assessments of this nature, where the improvement did not abut or greatly benefit the state property assessed, and that the committee be governed by the recommendation of the attorney general's department. Motion seconded by Mr. Reeves, and carried.

The secretary presented the following communication from the Collector of Internal Revenue, regarding the taxability of admissions to agricultural fairs, etc.:

"Upon further consideration of the subject of the taxability under section 800 of the Revenue Act of 1918, of admissions to agricultural fairs, particularly admissions to 'customary fair features,' as defined in article 46 of Regulations 43, revised, Part 1, and St. Mim. 2250, it is held:

"(1) That the term 'customary fair features' shall embrace any feature that is a *customary adjunct to or part of an agricultural fair*, irrespective of whether or not the feature in itself is primarily directed to the advancement of agriculture.

"(2) That amounts paid for admission to any such feature of an agricultural fair are entitled to exemption under the provisions of section 800 (b) of the Act, *provided* such feature is conducted by the agricultural fair association itself with the entire receipts, after deducting reasonable expenses, inuring to the exclusive benefit of the fair association; and *provided further*, that such receipts are not distributed to the stockholders or members of the fair association.

"Collectors of Internal Revenue will be governed by the foregoing in determining the taxability of admissions to all attractions or features offered in connection with agricultural fairs. St. Mim. 2250 and all other rulings or instructions in conflict with the position of the department, as above outlined, are hereby revoked.

"Please acknowledge the date of the receipt of this letter by return mail.

"PAUL MYERS,
"Acting Commissioner."

Under this ruling, the secretary was instructed to file an application for abatement of tax assessed on admissions to night show in front of the grand stand, amounting to \$4,403.99.

The secretary also brought to the attention of the board the matter of tax on ice cream sold by the dairy department in the agricultural building during the 1920 Iowa State Fair, which amounted to \$594.32. Also the ruling of the Internal Revenue Department on this matter under date

of January 28th. The Revenue Department held that this tax should be collected from the customer and, therefore, was not being demanded of the state. Therefore, the tax should be paid.

Mr. Davis moved that the tax on ice cream sales, amounting to \$594.32, be paid. Seconded by Mr. Sheldon. Motion carried.

The board adjourned to attend the National Polled Hereford Breeders' sale in the new sale pavilion at the state fair grounds. Prior to this date, the board had extended a personal invitation to each member of the legislature to attend this national sale, so that they might become fully informed as to the facilities provided in the new cattle barn and sale pavilion.

TUESDAY AFTERNOON, 4 P. M.

The board convened at the office of the Department of Agriculture with all members present, except Escher.

Mr. Mullen moved that the president and secretary be directed to draw an order on the Auditor of State for \$2,400, state aid for the support of the Department of Agriculture; also for \$1,000 for insurance and repairs, as provided by section 1657-T. Seconded by Mr. Pike. Motion carried.

The board discussed at some length the recommendations of Governor Kendall relative to reorganizing a number of the state departments, contemplating the increasing of the duties of the State Board of Agriculture. The board came to no conclusions regarding these recommendations, but decided to ask Mr. E. H. Cunningham, secretary of the Iowa Farm Bureau Federation, and Mr. Charles D. Reed, director of the Iowa Weather and Crop Service Bureau, to meet with the board at 10 o'clock, Wednesday, February 2d.

The board adjourned to meet at 9 o'clock, Wednesday, February 2d.

MEETING OF THE STATE BOARD OF AGRICULTURE.

February 2, 1921.

The board was called to order at 9:30 a.m., with President Cameron presiding. The following members answered to roll call: C. E. Cameron, J. P. Mullen, A. R. Corey, W. W. Morrow, H. O. Weaver, E. T. Davis, E. M. Reeves, E. J. Curtin, C. A. Tow, C. F. Curtiss, F. E. Sheldon, Sears McHenry and H. L. Pike.

In accordance with the previous arrangements, Mr. E. H. Cunningham, secretary, and Mr. Whitted, publicity manager, of the Iowa Farm Bureau Federation, appeared before the board.

Mr. Cunningham stated that he did not know what attitude the present legislature would take regarding the recommendations of Governor Kendall, calling for the reorganization of certain state departments and enlarging the duties of the State Board of Agriculture. He stated, however, that, insofar as the Farm Bureau was concerned, they were especially interested that the necessary means be provided for collecting, tabulating and disseminating promptly the farm crop and live stock statistics. He stated that the statistics now collected by the State Department of

Agriculture through the township assessors were the only authentic and reliable statistics available, but on account of no appropriation being made to take care of the proper auditing of the county auditor's reports and tabulating these statistics in the department, they were published so late that they were almost worthless. He stated that the Farm Bureau would favor legislation providing for an additional appropriation to provide the necessary help, either in the Department of Agriculture or in the Weather and Crop Service Bureau, which is a division of the Department of Agriculture, to handle these statistics promptly and efficiently. They would also like to have the Weather and Crop Service Bureau given the necessary help so that they might extend their estimates to all classes of live stock, instead of confining their estimates to farm crops, as they do at the present time.

Mr. Reed also appeared before the board and stated that at the present time they were handicapped on account of the limited amount of help provided for taking care of the work in the Weather and Crop Service Bureau. He outlined a plan whereby the Weather and Crop Service Bureau might handle the statistics collected through the township assessors; also a plan for making an estimate on the number and value of live stock on farms at least twice a year. He emphasized the fact that the law should be so amended as to provide a penalty in case any one failed to answer the inquiries asked by the township assessors. And provision should also be made to have the township assessor's books accompany the county auditor's reports, so that the latter reports might be audited and verified. He made the following recommendations which he thought were necessary to take care of the additional work:

Make the representative of the United States Bureau of Crop Estimates assistant director, and pay him, in addition to the salary paid by the government, the sum of \$1,080 per year. Increase the director's salary from \$1,800 to \$2,520. Provide for one chief clerk at \$1,800 per year; one stenographer and clerk at \$1,200; one clerk at \$1,200; additional clerical hire, \$800; traveling expenses, \$1,400; making a total of \$10,000 annually.

These matters were discussed at length by the Board, Mr. Cunningham, Mr. Whitted and Mr. Reed and they came to the conclusion that before any action was taken in this matter, they should get in touch with the chairmen of the committees on departmental affairs in both the house and senate. They arranged for a conference at the Savery Hotel at 7:30 with Senator Anderson and Representative Gilmore, chairman of the committees on departmental affairs in the senate and house; also Mr. Cunningham, Secretary of the Iowa Farm Bureau Federation. The board designated the executive committee, Mr. Weaver and Dean Curtiss to represent the board at this conference.

Wednesday, 1:30 P. M.

Mr. F. B. Paddock, J. D. Seaman, R. S. Herrick and B. A. Brown, representing the Beekeepers Association, appeared before the board and presented the following recommendations for the honey and bee department. They suggested that the classifications should be thoroughly re-

vised and that the premiums be increased approximately fifty per cent. They stated that the present value of the bees in the state of Iowa was approximately \$2,250,000 and the equipment necessary to producing the annual crop is estimated at \$750,000, making a total of \$3,000,000 invested in the industry, and that the Iowa Beekeepers produce over \$1,000,000 worth of honey annually. They also pointed out that the other state fairs in adjoining states offered a much more liberal classification for honey and bees. They also asked that a superintendent be placed in charge of this department and that definite shipping instructions be printed in the premium list.

REVISION OF PREMIUM LIST

The next order of business was the revision of the premium list and the president called upon the superintendent of the horse department for his recommendations.

HORSE DEPARTMENT

Mr. Curtiss, superintendent of the horse department, submitted a complete revision of the classification for the horse department, which called for the following increases:

Percheron, \$210; Belgian, \$245; draft mares and geldings, \$155; saddle horses, \$510; Welsh ponies, \$50; Shetland ponies, \$50; Hackney ponies, \$50; ponies in harness, \$50; ponies under saddle, \$25; mules, \$10.

Making a total increase of \$1,355. The \$500 increase in the saddle horse division is to be offered for a junior stake with an entry fee 2 per cent of the stake.

CATTLE DEPARTMENT

Mr. H. L. Pike, Whiting, Iowa, stated that inasmuch as the Shorthorn and Hereford Associations were offering the special money this year on a basis of \$3 state fair money for each \$2 association money, it would be necessary to make increases in these divisions. Mr. Pike recommended the following increases:

Shorthorn Division, \$2,500; Hereford Division, \$1,750. In the Angus Division, drop amateur class and leave the open class at \$3,600, same as in 1920. This would call for an increase of \$100 on account of the Angus Breeders' Association cutting their appropriation from \$1,200 to \$600.

Mr. Pike also recommended that all amateur classes be discontinued and that the following new classes for Iowa cattle be offered:

Iowa Herefords, \$800; Iowa Holsteins, \$800; Iowa Guernseys, \$800; Iowa Jerseys, \$800.

Mr. Pike also recommended that \$250 be added to the class for Milking Shorthorns in order to meet the offer of the American Shorthorn Breeders' Association to contribute \$500 to this class. He also recommended that the class for two-year-old steers be discontinued. The total increase recommended in the cattle department amounts to \$5,800.

SWINE DEPARTMENT

Mr. Tow, superintendent of the swine department, called the board's attention to the resolution adopted by the Swine Record Associations. This resolution provides that for all special money, including futurities, over and above the regular classification, the Record Associations will contribute dollar for dollar in these special classes.

Mr. Tow moved that the state fair offer, over and above the regular classification for futurities and other specials, not to exceed \$250 for any one breed, this to be offered on a basis of \$1 fair money to \$2 association money. Motion seconded and carried.

DAIRY BUILDING

Mr. Barney, superintendent of the dairy department, appeared before the board regarding the matter of a new dairy building on the state fair grounds. He stated that the dairy industry now represented more than \$150,000,000 and that Iowa was one of the very few states that had no building on the state fair grounds. He further stated that the dairy interests of the state had endorsed the proposition for a new building. He further stated, however, that it was very evident that but few appropriations for new buildings would be made at this session of the legislature and rather than take a small appropriation, which would not provide an adequate building, that it might be well to let the matter go over until the next session of the legislature, but felt that the matter of a new dairy building should be the next improvement asked for.

Mr. Curtin moved that owing to the high cost of building materials and the condition of the state's finances at this time that the matter of appropriations for a new dairy building be deferred. Motion seconded by Mr. Sheldon and carried.

SHEEP DEPARTMENT

No recommendations were made for a change in the classification for the sheep department, with the exception that the Iowa Fleece Wool Growers' Association made a request that a classification calling for \$396 be offered for the wool exhibit. Of this amount, the Association will contribute \$150. This would call for an increase of \$146 on the part of the state fair management. Mr. Helser requested that two county booths in the agricultural building be set aside for the wool exhibit.

POULTRY DEPARTMENT

The revision of the Junior poultry department calls for an increase of \$175. This increase is due to the fact that commission firms offered approximately \$250 in specials in this department in 1920 and it was not deemed advisable to solicit this special money for the 1921 fair.

AGRICULTURAL DEPARTMENT

The recommendations of the committee appointed by the county agents to make certain recommendations regarding county agricultural exhibits were read. Mr. Weaver stated that there was considerable expense in collecting the necessary material and putting up a good county exhibit and that he felt the county agents could not do their counties justice

unless there was quite a liberal increase in the amount of premium money offered. Therefore, he recommended that the amount to be added for each county exhibit scoring in excess of 500 points be increased from \$200 to \$300.

The recommendations of the Iowa Beekeepers' Association were again called to the attention of the board. Mr. Weaver recommended that \$125 be added to the bee classification and he also indicated to the board that he would arrange with some member of the Beekeepers' Association to serve as assistant superintendent in charge of the honey and bee department.

HORTICULTURAL DEPARTMENT

Mr. Reeves, superintendent of the horticultural department, stated that he desired to make very few changes in the horticultural department. He recommended that a grand sweepstake prize of \$5 for the best plate of apples in this show be added and that a slight increase be made in the classification for nuts.

TEXTILE AND CHINA DEPARTMENT

Mr. Legoe, superintendent of the textile and china department, recommended that a third premium on household fabrics, quilts, etc., and a third premium on economy classification be added. Also that a third prize be added to the professional class and the amateur class for hand-painted china. He also recommended that in the class for bead and stencil work but two premiums be offered.

Mr. Legoe also requested that the superintendent of the grounds go over the exposition building before the next state fair and make the necessary repairs so that the doors may be securely locked.

HORSESHOE PITCHING CONTEST

Mr. Davis moved that \$300 be appropriated for the horseshoe pitching contest for 1921 and that the winner in this contest at the 1920 fair be barred from competing. Seconded by Mr. McHenry. Motion carried.

Mr. Mullen moved that inasmuch as this completed the revision of the premium list and that all of the recommendations of the superintendents had been gone over carefully and agreed upon, that the recommendations as made by the different superintendents in regard to revising the premium list be approved. Seconded by Mr. Pike and carried.

ADMISSION FEES

The admission fees at the outside gates, grand stand and horse show were discussed by the board and, while no action was taken, it was the consensus of opinion of the board that the admissions should remain the same as at the 1920 fair.

EXHIBITORS' TICKETS

The board discussed at length the feasibility of providing exhibitors with a ticket which would permit them to enter the grounds more than once each day.

Mr. Curtiss moved that the coupon exhibitors' tickets be issued again

this year, bearing the notation thereon that if the holder wished to enter the grounds more than once each day, his photo pasted on the inside front cover of the ticket would admit him at the outside gate upon his signing a readmission statistical check after the coupon for that day had been taken up.

APPROPRIATIONS

The matter of appropriations to be asked of the Thirty-ninth General Assembly was discussed at length.

Mr. Davis moved that the Thirty-ninth General Assembly be asked to reimburse the Department of Agriculture for funds used in completing the cattle barn, amounting to \$62,532; for purchasing additional land in excess of state appropriation, \$4,513; to pay city assessment for paving, etc., \$15,073. Seconded by Mr. McHenry, and carried.

The claim of F. E. McCarthy for a refund of concession paid for space in the exposition building was brought to the attention of the board by Mr. Legoe. Mr. Legoe moved that the sum of \$25, or one-half of the concession, be refunded to Mr. McCarthy, with the understanding that this was in full settlement of his claim. Seconded by Mr. Davis. Motion carried.

MEETING OF THE STATE BOARD OF AGRICULTURE

February 3, 1921

The board was called to order at 9:30 A. M. with President Cameron presiding. The following members responded to roll call: C. E. Cameron, J. P. Mullen, A. R. Corey, W. W. Morrow, H. O. Weaver, E. T. Davis, Elmer M. Reeves, E. J. Curtin, Cyrus A. Tow, T. C. Legoe, F. E. Sheldon, and Sears McHenry.

The secretary presented the following statement showing the cost of advertising the 1920 fair and the budget recommended for advertising the 1921 fair.

<i>Advertising</i>	1920 <i>Cost</i>	1921 <i>Budget</i>
Country newspapers	\$ 5,614.19	\$ 6,000.00
Plate for country newspapers.....	1,784.67	1,700.00
Des Moines daily papers.....	5,405.72	6,000.00
Daily papers outside Des Moines.....	904.95	1,000.00
Agriculture and live stock papers.....	1,736.07	1,700.00
Horse papers	501.09	500.00
Miscellaneous papers	172.50	175.00
Director of Advertising salary, 5 months.....	833.34	833.34
Assistant during fair	100.00	100.00
Clerk and stenographer, salary 5 months.....	625.00	625.00
Printing Greater Iowa.....	688.65	688.00
Hangers and window cards.....	767.57	1,000.00
Billboard paper	154.00	160.00
Billboard service	1,168.90	1,200.00
Distributing advertising matter.....	166.50	165.00
Auto road map advertising.....	150.00
50,000 advertising heralds.....	613.50	600.00
Daily programs	90.65	80.00

Photographs	261.75	175.00
Cuts, electros	196.34	200.00
Art work, drawings.....	157.00	165.00
	<hr/>	<hr/>
	\$22,092.59	\$23,066.00

Mr. Lëgoe moved that the advertising budget calling for \$23,066 for advertising the 1921 fair, as outlined by the Secretary, be approved. Motion seconded by Mr. Weaver, and carried.

EXECUTIVE COMMITTEE MEETING

February 4, 1921

Members present: Cameron, Mullen and Corey.

In accordance with the instructions of the board, the committee prepared the bill providing for an appropriation to reimburse the department for funds invested in cattle barn, additional land and also funds to take care of the paving assessment against the state fair grounds.

The committee met with Representative Knickerbocker and Senator Wichman and they agreed to introduce the bill in both House and Senate.

The committee had a conference with Mr. Henry Deets, who according to previous arrangements, was employed to succeed Mr. James H. Deemer as superintendent of the Iowa state fair grounds March 1, 1921. His compensation was fixed at \$150 a month. He was also granted the following privileges, which were to be construed as a part of his salary: The use of the custodian's house on the state fair grounds, the privilege of keeping not to exceed two cows, one hundred chickens, and use of down wood for fuel. Also the garden plat near the custodian's house.

SPECIAL COMMITTEE MEETING

Auditorium Hotel, Chicago, February 13-17.

In accordance with previous arrangements, special committee consisting of Cameron, Mullen, Corey and Director Curtin, met at the Auditorium Hotel, Chicago, February 13th to 17th inclusive. The committee attended the following meetings: International Motor Contest Association, the organization controlling dirt track automobile racing at the various state fairs, Monday, February 14th; meeting of the Great Western Circuit, Iowa-Minnesota-South Dakota Racing Circuit, American Trotting Association, on Tuesday, February 15th; the attraction meeting of the International Association of Fairs on Wednesday and Thursday, February 16th and 17th.

The committee formed the Iowa-Minnesota-South Dakota Racing Circuit, consisting of the following members: Mississippi Valley Fair & Exposition, Iowa State Fair, Minnesota State Fair, South Dakota State Fair, Interstate Fair, Sioux City. It was agreed that each member would formulate their own program and submit a copy to Secretary McIlvaine. It was also agreed that the Circuit Ad. should be carried in The Horse Review and in The Western Horseman.

The committee closed the following contracts:

F. M. Barnes, Inc., twelve hippodrome acts for eight days, \$8,500.

Ruth Law's Flying Circus, to put on the following flights each day: First flight, Ruth Law doing wing walking and other stunts, including looping the loop on the top wing of airplane. The second flight to consist of a man changing from an automobile to an airplane from a race track, and doing acrobatic stunts on the plane in flight. The third flight to consist of a night flight, looping the loop and other fancy flying with fireworks attached to airplane, eight days, \$7,000.

Thearle-Duffield Fireworks Co., night show in front of the grandstand for seven performances of the spectacle known as "Montezuma," \$10,000.

Thaviu and his Band, consisting of thirty-seven people, including A. F. Thaviu, director, four singers and thirty-two musicians, seven days, \$4,500.

International Auto Racing Association for guaranteeing the appearance of eight racing cars and eight professional drivers to participate in auto races on Friday, August 26th, and Friday, September 2nd, \$3,000.

J. Alex Sloan, to guarantee the appearance of six cars and six professional drivers to participate in the automobile races on Friday, August 26th, and Friday, September 2nd, and for the exhibition of auto polo twice daily August 26th to September 2nd, inclusive, \$5,000.

The committee also closed a sharing contract for the Clarence A. Wortham Shows, to consist of not less than twenty shows and six riding devices, the fair to receive thirty per cent of the gross receipts taken in at all shows and rides.

EXECUTIVE COMMITTEE MEETING

February 18-19, 1921

Members present: Cameron, Mullen and Corey.

The committee conferred with the sub-committees to whom were referred the bill providing for an appropriation to reimburse the department for funds invested in cattle barn, additional land, etc. Also the committee to whom was referred House File No. 488, by Long, and Senate File No. 428, by Cessna.

The request of Charles C. Deering, chairman of the committee on arrangements for the National Shrine Convention, for the use of the grandstand and race track on Thursday, June 16th, and for the use of the camp grounds for camping purposes, and machinery hall for storage of automobiles during the Shrine convention June 14th to 16th, inclusive, was granted by the committee with the understanding that the State Board of Agriculture would be reimbursed for any expense they incurred on account of placing chairs in the grandstand and cleaning up the grounds.

The committee also authorized the secretary to purchase five barrels of linseed oil at 78c per gallon, one drum leptune at 55c per gallon, one barrel of sunproof outside white at \$3 per gallon.

EXECUTIVE COMMITTEE MEETING

March 8-9-10-11, 1921

The committee met with Cameron, Mullen and Corey present.

The proposition of Ed. M. Williams, Des Moines, Iowa, to furnish 100 two and two and one-half inch elm trees planted on the fair grounds and guaranteed at \$2 each, was submitted to the committee by Mr. Foglesong, the landscape architect.

The committee authorized Mr. Foglesong to order a sufficient number of trees to plant one row on the parking from Grand Avenue gate to University Avenue, and on the parking of University Avenue from E. 30th to 33rd Street. Also one row inside the fence from the Grand Avenue entrance to University Avenue. Also one row on the north side of the street running from the street car entrance to Rock Island Avenue.

The proposition of Walter Raub to put on balloon ascensions during the fair was brought to the attention of the committee.

The committee authorized the secretary to make a contract for these ascensions covering seven days of the fair for the sum of \$400.

The following bids were received for printing the 1920 premium list:

	12,000 copies	15,000 copies
Campbell Printing Co.	\$2,671.00	\$3,157.00
Homestead Printing Co.	2,475.00	2,895.00
The Dalton Press	3,584.00	4,424.00
Register and Tribune	3,294.00	3,867.00
The Doty Publishing Co.....	2,595.00	3,038.25

The committee authorized the secretary to award the contract to the Homestead Printing Co. on their bid of \$2,475 for 12,000 copies.

The committee appointed the following superintendents:

Poultry Department—V. G. Warner, Bloomfield.

Rabbit Department—Frank L. Eastwood, Des Moines.

Boys' and Girls' Club Department—F. P. Reed, Ames.

Boys' and Girls' Judging Contest—P. S. Shearer, Ames.

Art Exhibit—Prof. C. A. Cumming, Des Moines.

Public Health Department—Dr. G. H. Sumner, Des Moines.

Baby Health Department—Mrs. Edna M. Wallner, Atlantic.

Domestic Science—Miss Neale S. Knowles, Ames.

The secretary was also instructed to communicate with the president of the State Federation of Women's Clubs as to their choice for chairman of the program committee that will have charge of the program carried on in the auditorium of the women and children's building.

The committee's attention was called to the propositions submitted by the Duroc Jersey, Poland China, Chester White and Hampshire Record Associations regarding the futurities and special prizes.

The secretary was directed to write these associations that the board had already made an appropriation of \$250 as their contribution to these futurities, and the committee was not in position to make any change in this appropriation.

The committee's attention was also called to the fact that the Belgian

Association had cut their appropriation from \$200 to \$100 for the Belgian futurity. Inasmuch as the board has been appropriating \$2 for each \$1 added to these futurities by the record associations, the secretary was directed to cut the appropriation in the Belgian futurity from \$400 to \$200.

Professor Earle, superintendent of the junior poultry department, asked that the fair provide a banner in the junior poultry department for the county making the largest showing of poultry. This suggestion was approved by the committee and the secretary was directed to arrange for the banner.

On the recommendation of Mr. Pike, superintendent of the cattle department, the secretary was authorized to increase the class for Brown Swiss cattle from \$855 to \$1,000. Also offer \$200 in an Iowa class for Red Polled cattle, providing the Iowa Red Polled Cattle Club will contribute \$100 to this class. Also \$150 for a county Guernsey herd, providing the Iowa Guernsey Breeders' Association will secure contributions to this class amounting to \$150.

The secretary was authorized to secure wholesale prices on a low down grader to be used on the track, streets and for levelling new ground.

The secretary was also authorized to sign a note as secretary of the Iowa department of Agriculture for \$3,000, funds to be deposited to W. W. Morrow, treasurer account, to take care of the running expenses of the department until funds are available from the state appropriation now pending in the legislature.

The committee conferred with Major Lambert and also C. F. Curtiss, superintendent of the horse department, relative to the use of the horse barns on the state fair grounds by two companies of cavalry. The committee came to the conclusion that the accommodations to be offered the cavalry would not be satisfactory. Therefore, they did not deem it advisable to make a proposition to Major Lambert for the use of the barns.

The committee also conferred with Henry Deets, superintendent of grounds, regarding the pay of men to be employed at the grounds. Also the work that should be done early this spring. The committee was of the opinion that the superintendent should be able to hire men and teams for \$6 and \$6.50 a day; common carpenters, \$4.50 per day; roof painters, \$4 per day; common labor, \$3.50 per day; truck driver, \$4 per day.

Mr. Deets was instructed to grade and seed the parkings on E. 30th from Grand Avenue to University Avenue; also along University Avenue. Also open new driveway off of University Avenue at 33rd Street to residence. Also grade and seed the new ground around the residence. He was also instructed to open the ditch around the inside of the race track and to grade and seed the center field that has been cut up by the show ring.

The committee also approved the following speed program which had been agreed upon by the committee during the circuit meeting at Sioux City and also at the Auditorium Hotel in Chicago:

DAILY SPEED PROGRAM

Friday, August 26

FULL PROGRAM OF AUTOMOBILE RACES

Saturday, August 27

Iowa State Fair Futurity No. 6, trotting division (estimated).....	\$1,000

Five furlong run, added money.....	150
Four and one-half furlong run, added money.....	150

The committee appeared before the agricultural and the appropriations committee in the House and also the appropriations committee in the Senate for the purpose of giving the committees information regarding the bills pending before the legislature affecting the Department of Agriculture and the state fair.

The committee also considered the numerous propositions on file for bands to play at the state fair this year. No action was taken.

EXECUTIVE COMMITTEE MEETING

March 15-16-17, 1921

The committee met with Cameron, Mullen and Corey present.

The secretary brought to the attention of the committee, the correspondence with the National Duroc-Jersey Record Association, the Chester

White Swine Record Association and the Poland China Promotion Club, exhibitors and breeders regarding the futurities at the 1921 fair.

The secretary was instructed to write the inquiring exhibitors and breeders that the board was not cutting the appropriations in any of the swine divisions but would offer the same amount as last year. He was also instructed to write the record associations, stating that the appropriation of \$250 for these futurities was the final proposition to be made by the Iowa State Board of Agriculture.

The secretary was authorized to rent the two acres of ground outside of the fence and south of the old game farm to Mr. Nichols for the sum of \$20, to be paid in advance.

Rule 64 of the premium list regarding newspaper subscription solicitors working on the state fair grounds was brought to the attention of the committee. The committee decided to amend this resolution requiring each solicitor to put up a \$50 cash deposit at the time he is assigned space, the same to be forfeited if he leaves his booth or violates any of the provisions of rule 64.

EXECUTIVE COMMITTEE MEETING

March 24-25, 1921

Members present: Cameron, Mullen and Corey; also Directors Weaver, McHenry and Legoe.

The secretary was directed to communicate with Mr. Curtin for the purpose of determining upon the amount of the bid to be submitted for the Western Breeders' Futurity to be raced this year.

The secretary informed the committee that there were certain changes and repairs to be made at the custodian's residence on the fair grounds. This to include basement under the kitchen, new floor in kitchen, papering all rooms on the first floor and constructing a new back porch. He also suggested that the summer kitchen be removed and used for toilet in camp grounds or for some other purpose.

The committee authorized these changes and repairs and authorized the superintendent, Mr. Deets, to proceed with the work.

Prof. C. A. Cumming, superintendent of the art department, was authorized to make a trip to St. Louis during the art show for the purpose of selecting the pictures to constitute the loan exhibit for the Iowa State Fair. His railroad fare and traveling expenses to be paid by the fair management.

The committee approved payment of bills.

EXECUTIVE COMMITTEE MEETING

April 5-6-7-8, 1921

The committee met with Cameron, Mullen and Corey present.

The officers of the Des Moines Driving Club conferred with the committee regarding the use of the grandstand and race track on June

13-14-15. They informed the committee that the club had elected the following officers: F. G. Warden, president; George A. Wilson, vice president; L. Rood, secretary; John F. Griffin, treasurer. They informed the committee that they had thirty-five signers to the guaranty list for \$100 each.

The following proposition was made for the use of the grandstand and track for the three days' race meeting; \$100 a day, and the fair management to take care of all expenses of putting the chairs in the grandstand, working track, etc.; or The Driving Club to pay the actual expenses the fair management is to on account of putting on the race meeting, and 10 per cent of the net receipts.

The committee also had a conference with the Shrine executive committee regarding putting on a train wreck at the fair grounds on Wednesday, June 15. The committee was informed that the Des Moines Driving Club had arranged for the use of the track on June 13-14-15 and if their committee could make arrangements with the Driving Club for putting on the train wreck after the races on Wednesday, it would be agreeable to the fair management. It was further understood, however, that grounds, buildings and all property was to be left in as good condition as before the train wreck was put on; that the Shrine committee would be expected to pay any expense the fair management might incur in making these repairs and arrangements to take care of the crowd.

The secretary was authorized to purchase fifty large fly traps at 75c each.

The secretary was also authorized to purchase sixty rods of the 58-inch and forty rods of the 28-inch American field fence from the fish and game department.

The committee approved payment of bills.

EXECUTIVE COMMITTEE MEETING

April 22-23, 1921

Members present: Cameron, Mullen and Corey.

The secretary informed the committee that the boy scout executives of the state of Iowa had named the following committee to take charge of the boy scout camp during the Iowa State Fair: Chairman, John L. Anguish, Fort Dodge; J. C. Cunningham, Ames, and Frederick G. Davie, Des Moines.

The committee proposed to establish a boy scout camp during the state fair and to have not less than thirty troops of eight boys each, accompanied by a leader or scout executive. The committee also suggested that they would be glad to take entire charge of the ushering in the grandstand and live stock pavilion, using the scout executives at the foot of the stairways to take the tickets and direct the boys.

They also indicated that they would be glad to put on a short boy scout demonstration in the stock pavilion each evening preceding the horse show. In return for this service, they would expect free admission for

the scout executives, leaders and boy scouts and would also accept any contribution to their mess fund that the board might decide upon.

The executive committee decided to submit a proposition to the boy scout committee, providing for free admission for the leaders and boy scouts, and also for a contribution to the mess fund amounting to \$30 for each team of eight boy scouts and leader, with the understanding that they were to perform the services outlined above.

The following rule was adopted for the state horseshoe pitching contest: Frank Jackson of Kellerton, Iowa, 1920 state champion, will contest for the 1921 championship with a member of the winning team in the tournament, best three out of five games of 21 points each, for a purse of \$50 and a medal to the champion. The present state champion is excluded from participating in the 1921 state tournament.

The following propositions for bands during the period of the state fair were brought to the attention of the committee:

Fort Dodge Military Band, twenty-five pieces, August 26 to September 2, inclusive, \$2,120.

Fischer's Burlington Band, twenty-five pieces, August 26 to September 2, inclusive, \$2,200.

Morgan's Rainbow Division Band, thirty pieces, August 26 to September 2, inclusive, \$2,500.

Argonne Post Band, thirty-one pieces and four singers, August 26 to September 1, \$1,822.

Henry and His Band, thirty-four pieces, August 26 to September 1, \$1,914.

Josephine Harper, twelve-piece girls' orchestra, August 26 to September 2, inclusive, \$275.

Winterset Boy Scout Band, sixteen pieces, August 26 to September 2, inclusive, \$350.

The secretary was directed to close contract for the Fort Dodge Military Band for an engagement August 26 to September 2, inclusive, for the sum of \$2,120. Also Josephine Harper's Twelve Piece Girls' Orchestra for the full period of the fair, for \$275.

The secretary was also directed to secure a proposition for Morgan's Rainbow Division Band for two days, August 26 and 27; also a proposition from the Argonne Post Band, August 28 to September 2, inclusive.

Mr. Charles Pye, secretary of the Iowa State Teachers' Association and Mr. Welch, director of the school exhibits department at the Iowa State Fair, submitted a proposition to the executive committee for bringing out a more comprehensive consolidated school exhibit. They informed the committee that the National Educational Association Convention, which will convene in Des Moines July 4-8, is planning on a very extensive consolidated school exhibit. They proposed that if the state fair management would pay the freight on such exhibits as would be suitable for the state fair, that they would arrange to have a committee pick out these exhibits and see that they were delivered to the state fair grounds immediately after the Teachers' Convention. They would also arrange for a committee to install these exhibits at the fair.

Inasmuch as the rules of the school exhibits department provide that the state fair management will pay the freight on all school exhibits, the committee accepted this proposition.

The president and secretary signed vouchers for the state appropriation made available by House File No. 451 for city assessment for paving, \$11,779.94; for repairs and improvements to buildings on state fair grounds, \$12,500; balance due on purchase price for additional land, \$4,513.

The committee approved payment of bills.

EXECUTIVE COMMITTEE MEETING

May 4-5, 1921

Members present: Cameron, Mullen and Corey.

The committee authorized Mr. Foglesong, landscape architect, to purchase not to exceed \$250 worth of shrubbery for planting around base of permanent buildings and perennials to be used in a hedge on either side of the walk leading to the women and children's building.

The secretary was authorized to purchase a new Underwood typewriter at a cost of \$102.50 less 10 per cent.

The arrangements with the Driving Club and the Executive Committee of the Shrine for putting on a train wreck at the fair grounds was discussed by the committee. It was decided that inasmuch as neither the Driving Club nor the Shrine were assuming any responsibility on account of the train wreck, or to place the grounds in the same condition they were before the show was put on, Mr. Connolly and Mr. Snyder, who are promoting the train wreck, be required to deposit \$1000 in cash to the credit of the department pay roll account as a guarantee, and to be used in placing the grounds and buildings in the same condition they were in before the show was put on, with the understanding that after all bills for replacing the grounds, etc., in condition were paid, the balance is to be returned.

On account of Senate File No. 567 making an appropriation of \$7,500 annually to be drawn and expended upon the order of the Director of the Weather and Crop Service Bureau, approved by the Secretary of the Department of Agriculture, and the Joint Resolution passed by the Thirty-ninth General Assembly failing to fix the salaries and make distribution of these funds, the Executive Committee recommended to the Committee on Retrenchment and Reform that the salary of the director and help be fixed as follows:

	Minimum	Maximum
Director, salary (in addition to \$1,080 per annum paid to him by the United States Government).....	\$1,800	\$1,800
Statistician	1,400	1,800
Clerk and stenographer.....	1,200	1,200
Clerk	960	1,200
Clerk hire, miscellaneous (might all be used in two or three months, mostly in checking assessor's books)	800	800
Miscellaneous expenses (balance of appropriation not itemized above).....

The committee also adopted the following rule which shall be optional with exhibitors in the minor departments where they make entries for less than \$10 in premiums, whether they purchase an exhibitor's ticket or not.

The following propositions were brought to the attention of the committee for band engagements at the fair:

Argonne Post Band, thirty-one pieces including director, seven days, August 27 to September 2 inclusive, \$1,630.

Morgan's Rainbow Division Band, thirty pieces, August 26-27, \$1,000; three days, August 26-27-28, \$1,400.

T. Fred Henry, two eight-piece orchestras, one seven days and one six days, \$916.

The committee also held a conference with Mr. E. T. Davis, superintendent of the public safety department, and discussed the plans for this year's fair. It was decided that Mr. Davis should hire twenty-five mounted men to be used as fence riders and for taking care of traffic on the principal streets. Also sixty-five foot men for other police duty. The mounted men to be paid \$5 per day with feed for their horses; the foot men \$4 a day. Sleeping quarters, for all men, equipped with cots and mats to be furnished by the department.

The committee visited the fair grounds and instructed Superintendent Deets to make the following repairs and improvements:

Paint roof and metal cornice on horse barn. Also roof of stock pavilion, administration building and brick dining halls.

Paint frame building used for blacksmith shop. Also vaudeville stages.

Have the gravel roof on the swine barn, brick horse barn and porches of administration building repaired.

Put a new shingle roof on the girls' dormitory, and patch the shingle roof on the boys' dormitory and the boys and girls' club building. Also patch shingle roof on speed barns.

Change grade in entrance at E. 30th street and University avenue, so that water will not stand in entrance.

Put in new wing fence at University avenue entrance, and paint metal gates.

Have three-foot cement sidewalk laid from University avenue to new residence.

Repair fence south of street car entrance.

Rebuild light line on Grand avenue. Also place all wires crossing race track and center field under ground in conduit.

Repair woven wire fence around outside of race track. Also steel fencing in front of grand stand and bleachers and at each end of paddock.

Build an addition on south side of postoffice about 12 by 14 feet for storing mail, etc.

The committee also decided to put up a permanent fence around back part of fair grounds. Also construct a fence running north and south just east of Seick Tent & Awning Warehouse, and poultry building, and to use the camp grounds and back part of the grounds for pasture. The superintendent was instructed to pasture stock at the following rates: Horses, \$3.50 per month; cows, \$3 per month; cattle under one year old, \$2.50 per month.

The committee approved payment of bills.

EXECUTIVE COMMITTEE MEETING

June 4-5-6, 1921

Members present: Cameron and Corey.

The purpose of the meeting was to meet the executive committee in charge of the first reunion of the 88th Division. The committees met at 10 a. m. Sunday, June 5, in the lounge room of the Chamber of Commerce. The plans for holding the reunion at the state fair grounds were fully discussed by the members of the two committees. The following proposition was made by the executive committee of the state fair:

The state fair will set aside the camp ground site occupied by the 168th Regiment in 1917, consisting of about fifteen acres of ground for the reunion camp site, carry water into the camp grounds and extend the water line down the main street through the camp. Also extend the lighting system into the camp site, provide three additional toilets, provide a ticket with a coupon for each day including Sunday, August 28, the ticket not to be transferable, and good for re-admission at the outside gates upon signing statistical check after coupon has been used. Tickets to be sold by the registration committee at \$1 each. All tickets are to be turned over to the registration committee and receipt taken for the same. At the close of the fair, all unsold tickets are to be returned and all tickets used to be paid for by the registration committee. The state fair is also to provide one thousand one-half sheet posters. The assembly tent at the head of Grand avenue is to be available for meetings on Friday, Saturday and Sunday; the stock pavilion to be available on Friday night, August 26. The Argonne Post Band to be subject to the orders of the reunion committee on Friday, Saturday and Sunday, August 26 to 28 inclusive. One box containing ten seats in the grandstand is to be assigned to the visiting army officers for afternoon and evening Friday and Saturday. The state fair is also to provide garbage cans and haul away all garbage.

The executive committee, in charge of the reunion, agreed to lay out the camp ground site, assist in locating water lines, light poles, etc.; also to arrange for tentage, cots, and blankets free of charge for all men in the camp; to be responsible for an accounting and sale of all tickets turned over to the registration committee; to participate in a review on Legion Day, Saturday, August 27.

The secretary was authorized to order two 12-foot gates for draw gates at race track; also two 12-foot park gates and one garden gate to be placed at new entrance near 33rd and E. University avenue.

The secretary also presented the proceedings of the Middle West Fair Circuit meeting held at Kansas City on May 21. The secretary was authorized to join this circuit, and remit the dues, amounting to \$100, same to be used in advertising the circuit in farm and live stock papers and also for employing a traffic manager to assist the live stock exhibitors making the circuit.

The committee authorized C. F. Curtiss, superintendent of the horse department, to attend the South Shore Country Club show on June 9 and 10 for the purpose of soliciting entries for the Iowa State Fair Horse Show.

The committee arranged for a meeting of the executive committee and also Directors Sheldon and Curtin for Monday, June 13.

The committee approved payment of bills.

EXECUTIVE COMMITTEE MEETING

June 13-16, 1921

Members present: Cameron, Mullen and Corey; also Directors Sheldon and Curtin.

The secretary brought to the attention of the executive committee the contract submitted by the Des Moines Electric Company. The contract provides for a sliding scale based upon the cost of coal. Also that the state fair should take over all of the wire, pins, insulators, etc., owned by the Des Moines Electric Company for supplying power and light to exhibitors and concessionaires on the state fair grounds. An inventory of this property on May 5, 1921, placed a value on same of \$950.78. Under the new contract the management of the state fair is to provide three large transformers at the transformer station of sufficient capacity and voltage to step the current down from 13,200 to 2,300 volts. Also the necessary transformers for stepping down the current from the primary lines over the grounds from 2,300 to 110/220.

The committee approved the contract as submitted by the Des Moines Electric Company and authorized the secretary to purchase their wire and other equipment at the grounds at the price indicated in the inventory of May 5.

The secretary was also authorized to submit the following bid on transformers located at Camp Dodge:

No.	Make	Type	Size	Prim. Volt	Sec. Volt	Bid
3	Pittsburg	5367	350 K V A	13,200	2,300	\$1,500
15	Gen. Elec.	H & A	5 K V A	2,200	110/220	150
1	Gen. Elec.	H	7½ K V A	2,200	110/220	15
8	Gen. Elec.	H & A	10 K V A	2,200	110/220	160
5	Gen. Elec.	H	15 K V A	2,200	110/220	150
2	Pittsburg	H E	10 K V A	2,200	110/220	40
5	Pittsburg	H E	20 K V A	2,200	110/220	200
4	Pittsburg	H E	15 K V A	2,200	110/220	120
6	Maloney	H E	15 K V A	2,200	110/220	180
1	Maloney	H E	37½ K V A	2,200	110/220	75
11	Maloney	H E	10 K V A	2,200	110/220	220
3	Maloney	H E	20 K V A	2,200	110/220	120
1	Gen. Elec.	H	2 K V A	2,200	110/220	5
						<hr/> \$2,935

The committee directed the superintendent of grounds to move the summer kitchen back of farm house to a point near the entrance of the county agents and farm bureau camp, the same to be used as headquarters for the farm bureau and county agent camp.

The committee also directed the superintendent of grounds to move the small building formerly used as a blacksmith shop to a location at the north end of the 88th Division camp grounds and convert same into a

men's toilet. Also to move the old ice house to a point agreed upon at the east side of the 88th Division camp and convert same into a ladies' and gents' toilet. Also build a men's toilet at the south end of the 88th Division camp grounds about 16 by 24 feet.

The superintendent of grounds was also instructed to extend a 1¼-inch water line and the necessary light lines into the 88th Division camp grounds.

The committee and Mr. Sheldon, superintendent of the admissions department, discussed at length the advisability of constructing a seven-foot wire fence setting off the camp grounds from the main portion of the fair grounds and putting in admission gates for the purpose of collecting admission from campers and doing away with the morning round-up in the main camp grounds.

The plan contemplated automobile gates and turn stiles on Grand avenue, on the road running south of the poultry building and on the road leading into the exhibitors' camp grounds south of the boys' dormitory. Campers' tickets are to be accepted for admission at these gates. Pass out checks, good only at camp ground entrance, to be issued to all parties, leaving the main portion of the grounds, who wish to return the same day.

Upon motion duly made and seconded, the secretary and superintendent of grounds were directed to build a fence and install the turn stiles, gates, etc., as outlined above. Those voting yes were Mullen, Corey and Sheldon. Voting no, Cameron.

The secretary and superintendent of grounds were directed to employ a foreman and electricians through the Des Moines Electric Company for rebuilding the Grand avenue light lines and also for laying the underground cable to the center field of the race track. Also to make such other repairs to the light lines as may be necessary, and to hang the new transformers.

The secretary was authorized to order 250 twelve-foot five-inch top cedar posts; 180 rods of specification "K" Ellwood fence; 160 rods of 26-inch specification "K" Ellwood fence, for building the camp ground fence.

EXECUTIVE COMMITTEE MEETING

June 28-29-30, 1921

The committee met with Cameron, Mullen and Corey present.

The committee authorized the purchase of the lumber in eight band stands used by the Executive Committee of the Shrine during the Shrine Convention, for the sum of \$200.

The committee authorized the purchase of the two pilasters used at the entrance of the Arabian Way on Fifth street and Grand avenue for the sum of \$50, the same to be used in building an entrance to the Midway on the state fair grounds.

The committee visited Camp Dodge and purchased the following equipment from the Northwestern Lumber & Wrecking Company:

Water pipe to be used in extending water lines into camp grounds to be used for the reunion of the 88th Division.

1200 feet of 1¼-inch galvanized pipe @ \$.10 per foot.....	\$120
600 feet of 1 -inch galvanized pipe @ .08½ per foot.....	51
900 feet of ¾-inch galvanized pipe @ .05 per foot.....	45
	<hr/>
	\$ 216.00
For toilet rooms in cattle barn and boys' dormitory, 20 porcelain toilets complete with all fixtures and seats in good repair.....	275.00
For ladies' toilet room in cattle barn and girls' dormitory, 3 enameled lavatories complete.....	30.00
Four shower bath outfits complete for bath room in cattle barn, swine pavilion, boys' dormitory and sheep barn at \$10 each....	40.00
Seventy screens 3x8-6 for screening in porch of girls' dormitory, at 25 cents each.....	17.50
Two hot water heaters for shower bath room in swine pavilion and cattle barn:	
Two 500 gallon hot water boilers.....	130.00
Two Arco hot water heaters.....	100.00
All seats in Liberty theatre built of 1½x12 clear spruce, approximately 200 sections 20 feet in length, to be used in seating country theatre under grand stand and soldiers' tent and sale ring..	175.00
Four steam tables to be used in brick dining halls.....	16.50
	<hr/>
Total.....	\$1,000.00

The secretary was authorized to purchase twelve 14-inch X-ray projectors at \$70.50 each and have same installed in cages under front of grand stand for lighting the two vaudeville stages and race track.

The secretary was authorized to order 450 feet of underground cable for carrying electric current into center field of race track.

The secretary was directed to make arrangements with Mr. C. C. Leffer, Sigourney, Iowa, to serve as superintendent of the camp ground.

The secretary was authorized to arrange with Seth Way, Des Moines, Iowa, to serve as superintendent of the auto parking ground. He to be allowed three men including himself for Friday, Saturday and Sunday; five men, including himself, from Monday until Friday.

The secretary was authorized to purchase or have made three low-down one-horse wagons for delivering feed to the horse, cattle and swine barns.

The superintendent of grounds was directed to employ a carpenter to reset the two rows of windows in the cattle barn so that they may be opened in order to provide better ventilation.

The superintendent of grounds was directed to employ the necessary plumbers for installing the toilets in the toilet room in the cattle barn and also in the toilet room in the boys' dormitory. Also to install the shower bath outfits in the cattle, swine and sheep barns and in the boys' dormitory.

The secretary was authorized to order the following flags for the buildings at the state fair grounds:

No.	Size
46.....	4 by 6
150.....	5 by 8
38.....	6 by 9
3.....	8 by 14
1.....	12 by 24

The superintendent of grounds was directed to use the old roof stored in the lumber yard in building an addition on the east side of the feed barn.

The secretary submitted a proposition made by The Wingate Company for decorating the stock pavilion, agricultural building, machinery hall, show room under grand stand, horse barn, cattle barn, sheep barn, swine barn, exposition building, poultry building, boys and girls' club building and the administration building for the sum of \$1,500. The proposition was accepted by the committee and the secretary was authorized to draw up and sign the contract.

The secretary brought to the attention of the committee the proposition made by J. B. Davidson, chairman of the state fair committee, for putting on the country theatre, using one-fourth of the space in the grand stand show room for this purpose. Also building permanent booths for the College Exhibit, the cost not to exceed \$500, this to be done with the understanding that the Public Speaking Department of the Iowa State College at Ames would spend not less than \$2,000 in putting on the proposition, two shows to be given daily. Admission to be free.

The committee called upon Colonel Brown, Commander at Fort Des Moines, and discussed the possibility of putting on a review of the cavalry now located at the Fort on Legion Day, Saturday, August 27. Also the possibility of putting on some riding features in the stock pavilion each night during the horse show. Colonel Brown indicated to the committee that he stood ready to cooperate with the fair management in every way possible in putting on a review and also providing features for the horse show.

The committee called upon Mr. Edmonds, Manager of the Ford Motor Company, and made him a proposition for the use of Power Hall. The rental to be the same as last year—\$1,000. This proposition was made with the understanding that they might exhibit their Fordson Tractors, Ford automobiles and the line of agricultural implements handled by the Ford Motor Car Company.

The committee approved payment of bills.

EXECUTIVE COMMITTEE MEETING

July 20-22, 1921

Members present: Cameron, Mullen and Corey.

The superintendent of grounds was instructed to put in a partition in the ladies' toilet north of the Boys and Girls' Club Building, the west end to be used for ladies and the east end to be used for men. Also move the men's toilet north of the farm barn to the south side of the camp grounds, to be used by the 88th Division. Place a cement floor in the three booths on the east side of the stock pavilion; one to be used as a general stand, one to be used by Dr. Thompson, U. S. Veterinarian; the other one for a dressing room for the band. Take out the stalls in No. 6 horse barn and fix same up to be used as sleeping quarters by the Admissions Department.

Put in tables and cooping in the building occupied by the coal exhibit and geological exhibit, same to be used for housing the rabbit show.

The committee authorized the secretary to purchase the window regulators in the laundry at Camp Dodge for the sum of \$100 and to have same installed in the brick cattle barn and the pony and carriage section of the horse barn. Also to purchase electrical equipment, including drops, sockets, etc.

The secretary was authorized to purchase one Close-To-Nature house for the sum of \$150 to be paid in three annual installments.

The secretary was authorized to order one 10,000 gallon car of oil at 4.92 per gallon and to have same placed on the streets at the fair grounds by the Des Moines Street Department.

The committee employed Harry Strandholm as chef for the club dining hall for the sum of \$180.

The secretary was authorized to purchase a second-hand delivery truck at not to exceed \$150.

The committee employed Fred Hethershaw to serve as assistant superintendent of the agriculture department, and also to rebuild and decorate the band stand in the center of the building and to take care of all other grain decorations for the sum of \$250.

The secretary was directed to sign the contract as submitted by the Des Moines Electric Company for furnishing current at the state fair grounds. Also to arrange with the Des Moines Electric Company or the Quartermaster at Camp Dodge for the loan of transformers to be used on grounds.

The committee approved payment of bills.

EXECUTIVE COMMITTEE MEETING

August 4, 1921

Members present: Cameron, Mullen and Corey.

The secretary was authorized to order 200 poultry coops for cooping the rabbit show.

The secretary was authorized to purchase the Chicago, Great Western building near the Old Mill for the sum of \$25.

The committee visited the fair grounds and directed the superintendent to make a number of repairs and do such other work as necessary in making preparations for the fair.

The committee also discussed at length the plans for the daily program.

The committee met with the city council with regard to the street car situation, and also with a committee from the Retail Merchants' Bureau. The committee received very little assurance from either organization that street cars would be in operation during the state fair.

The committee approved payment of bills.

MEETING STATE BOARD OF AGRICULTURE

Tuesday, August 23, 1921

An informal meeting of the State Board of Agriculture was held in the club dining room Tuesday noon, August 23. The Board discussed the possibility of securing street car service during the period of the state fair. On motion duly made, seconded and carried the executive committee and Director H. O. Weaver were authorized to communicate with Governor Kendall, F. C. Chambers, receiver for the street car company, and other officials with a view of establishing temporary street car service during the period of the state fair.

SPECIAL COMMITTEE MEETING

A special committee consisting of the executive committee and Director Weaver communicated with the Governor regarding temporary street car service during the period of the state fair. The Governor intimated his desire to cooperate with the fair management in this undertaking. He communicated with U. S. District Judge Martin J. Wade at the Congress Hotel, in Chicago, indicating his wish and the wish of the fair management, and arranged for a special committee to meet with him on Wednesday, August 24.

The committee also ascertained that Mr. F. C. Chambers, receiver for the Des Moines City Railway was in conference with Mr. Harris in Chicago.

The committee designated Mr. Cameron and Mr. Weaver as a special committee to go to Chicago and lay the proposition before Mr. Harris and Mr. Chambers and the committee representing the bondholders.

MEETING STATE BOARD OF AGRICULTURE

Thursday, August 25, 1921

Board Room, Administration Bldg., 10 A. M.

The following members were present: Cameron, Mullen, Corey, Weaver, Davis, Reeves, Curtin, Tow, Legoe, Curtiss, Sheldon, McHenry, Morrow and Pike.

The special committee appointed by the Board to negotiate for temporary street car service in brief made the following report: The committee, as requested, proceeded to Chicago and held a conference with Mr. Harris, Mr. Chambers and the chairman of the committee representing the bondholders. The committee placed before these representatives of the street car company the importance of temporary service during the period of the state fair.

Mr. F. C. Chambers, receiver for the street car company, communicated with U. S. District Judge Martin J. Wade, and arranged for a hearing on the matter at the Federal Building in Des Moines at two o'clock p. m. Thursday, August 25. The representatives of the street car company indicated to the committee that in their opinion the court would not

issue an order for temporary service without some guarantee that the street cars would be operated without loss to the receivers.

Moved, seconded and carried that the executive committee and Director Weaver be authorized and instructed to enter into negotiations, with power to act, with Judge Wade and the receiver of the Des Moines Street Railway Company on the basis of giving a guarantee against loss in operating street cars in Des Moines from August 26 to September 2 inclusive, provided said order, when issued by the Federal Judge, shall be in such form as to eliminate all expense except the absolutely necessary minimum expense of operation for said period.

SPECIAL COMMITTEE MEETING

Thursday, August 25

At two p. m. the special committee met in Judge Wade's court room with Mr. Gamble, attorney for the receivers of the Des Moines City Railway, and Mr. E. D. Perry, whom the committee had retained to represent the State Board of Agriculture in the case. At four p. m. the court issued the following order:

IN THE DISTRICT COURT OF THE UNITED STATES FOR THE SOUTH-
ERN DISTRICT OF IOWA, CENTRAL DIVISION

North American Railway Construction Company

vs.

Des Moines City Railway Company, et al.

Consolidated No. 4099
Equity

Harris Trust & Savings Bank, Trustee

vs.

Des Moines City Railway Company, et al.

MEMORANDUM AND
ORDER

A strong appeal has been made by the officers of the state and the directors of the Department of Agriculture for the State of Iowa, that an order be made providing for street car service during the state fair. The bondholders have been consulted and in view of the importance of service during the fair, not only to the people of Des Moines, but to the people of the state, it is my judgment that the cars should be operated.

Of course, if there should be a deficit in such operation it must be paid by some one. I have no power to require the bondholders to pay any deficit and therefore I only have power to authorize service on condition that if there should be a deficit in actual operating expenses it shall be paid by the Agricultural Association or some others. It is my hope that with the demand for service during the days of the fair enough of money can be collected for fares to pay actual expenses. I am advised that those interested are willing to guarantee any loss in operation.

Of course, though, it is impossible to establish more than the minimum service that was in operation at the time of suspension and to avoid any possible misunderstanding the order is made positive that such service shall immediately suspend upon the close of the fair to remain suspended under the order heretofore made pending foreclosure.

ORDER.

And now on this 25th day of August, 1921, in the above entitled cause
IT IS ORDERED AND ADJUDGED that the receivers shall as soon as practicable restore the service of the street cars as near as practicable to that which was suspended under order of this court on the 2nd day of August, 1921, such restored service to continue only until the close of the state fair and not later than Friday, September 2nd, 1921.

This order is conditioned upon a guarantee to be approved by the Receivers, by some individual or organization to pay to the receivers any deficit in actual cost of putting the cars in operation and operating the same as herein required.

(Signed) Martin J. Wade, Judge.

The committee designated Mr. H. O. Weaver and Mr. E. D. Perry to represent the State Board of Agriculture to cooperate with Mr. Gamble, attorney for the Des Moines City Railway, in drawing up the agreement referred to in the order of the court, with instructions to try and have same completed to present to the Board meeting at seven o'clock.

MEETING STATE BOARD OF AGRICULTURE

Thursday, August 25

Board Room, Administration Bldg., 7:30 p. m.

Members present: Cameron, Mullen, Corey, Morrow, Weaver, Davis, Reeves, Curtin, Tow, Legoe, Curtiss, McHenry, Sheldon and Pike.

The president requested that the secretary read carefully the order issued by Judge Martin J. Wade providing for temporary street car service during the period of the state fair. The secretary read the order as above.

The secretary also read the following contract drawn jointly by Mr. Weaver and Mr. Perry, representing the State Board of Agriculture, and Mr. Gamble, representing the Des Moines City Railway.

WHEREAS the Iowa State Agriculture Society has requested the receivers of the property of the Des Moines City Railway Company to operate street car service in the city of Des Moines to and until the close of the Iowa State Fair, on to-wit: September 2, 1921; and

WHEREAS the Honorable Martin J. Wade, Judge, on August 25, 1921, made and entered in Consolidated No. 4099—Equity, pending in the United States District Court for the Southern District of Iowa, Central Division, an order as follows:—

And now on this 25th day of August, 1921, in the above entitled cause

IT IS ORDERED AND ADJUDGED that the receivers shall as soon as practicable restore the service of the street cars as near as practicable to that which was suspended under order of this court on the 2nd day of August, 1921, such restored service to continue only until the close of the state fair and not later than Friday, September 2, 1921.

This order is conditioned upon a guarantee to be approved by the receivers, by some individual or organization to pay to the receivers any deficit in actual cost of putting the cars in operation and operating the same as herein required.

WHEREAS the undersigned Iowa State Agriculture Society of the State of Iowa and the undersigned individual members thereof in consideration of the rendition of service as in said order provided are willing to indemnify and hold the said receivers harmless and guarantee them against any loss or deficit in the actual cost of putting the cars in operation and operating the same as in said order provided.

NOW, THEREFORE, in consideration of premises and rendition of the service by the said receivers of the said Des Moines City Railway Company and the advancement by them of the sums necessary to discharge the expense of such service the undersigned do hereby agree to pay to F. C. Chambers and H. A. Miller, Receivers, promptly upon the rendering of

statement to them of the amount of any loss or deficit sustained by them in the actual cost of putting the cars in operation and operating the same, as in said order provided.

Dated at Des Moines, Iowa, this 25th day of August, 1921.

STATE BOARD OF AGRICULTURE OF THE STATE OF IOWA

By C. E. Cameron, A. R. Corey, Its President and Secretary.

C. E. Cameron	E. J. Curtin
J. P. Mullen	Cyrus A. Tow
A. R. Corey	T. C. Legoe
W. W. Morrow	C. F. Curtiss
H. O. Weaver	F. E. Sheldon
E. T. Davis	Sears McHenry
E. M. Reeves	H. L. Pike

The order and contract were discussed at length by the Board. The possibility of securing liability insurance covering the employes and also public liability was thoroughly discussed and representatives of different insurance companies were called in to the conference. The Board also called into conference Mr. O. H. Bernd, Secretary of the Des Moines City Railway, and the Auditor. Mr. Bernd presented to the Board figures showing that the actual operating expense of the Des Moines City Railway for the last two weeks in July, not taking into consideration taxes and interest on bonds, averaged about \$3,600 per day, and that the receipts for the same period averaged about \$4,000 per day. Mr. Bernd also stated to the Board that the Des Moines City Railway Company did not carry employes' compensation insurance and also stated that he thought it would be impossible to secure public liability insurance for a street railway company.

Mr. McHenry moved that the report of the committee be accepted and that the committee be continued for the purpose of delivering the signed contract to the Des Moines City Railway Company, and for the further negotiations with a view of securing both employes' and public liability insurance.

The officers and members of the State Board of Agriculture signed the agreement as officers of the board and also as individuals.

SPECIAL COMMITTEE MEETING

Friday, August 26, 1921

The committee delivered the signed agreement to Mr. Gamble, representing the Des Moines City Railway, and also requested that they take out liability insurance covering all employes of the company. The committee also communicated with a number of insurance companies and made satisfactory arrangements for insurance covering the employes of the company but found it impossible to secure public liability insurance.

EXECUTIVE COMMITTEE MEETING

August 20 to September 2, Inclusive

The committee held no regular meetings during the period of the fair but handled all matters brought to their attention. The committee also

approved payment of contracts and bills which were paid by the secretary during the period of the fair.

The committee also issued an order to the superintendent of the camp grounds that all platforms that were not occupied by Monday night, the second week of the fair, were ordered released and vacated, and the superintendent was instructed to permit other campers to occupy same.

The committee also authorized an appropriation of \$50 for a feature to be put on by the Des Moines Daily Capital, the Daily Capital to contribute an equal amount and give the feature front page publicity Friday, Saturday, Monday and Tuesday of the fair. The plan provided that the Daily Capital was to have a party on the grounds each day, to be known as the "Money Man." If he was approached by any state fair visitor on the fair grounds and the visitor stated, "You are The Daily Capital Money Man," the visitor to be in possession of a copy of the Daily Capital, the visitor was to be awarded \$25 in cash. This award to be made on the four days above mentioned.

MEETING STATE BOARD OF AGRICULTURE

Board Room, Administration Building, September 2, 1921

The meeting was called to order with President Cameron presiding. The following members responded to roll call: Cameron, Mullen, Corey, Morrow, Weaver, Davis, Reeves, Curtin, Tow, Curtiss, Legoe, Sheldon, McHenry and Pike.

The superintendents of the various departments presented the following payrolls for the approval of the board:

Awards department	\$ 92.00
Rabbit department	85.00
Textile and china department.....	420.00
Cattle department	1,378.66
Swine department	848.00
Sheep department	654.00
Property men	447.00
Concession department	2,825.50
Treasury department	3,607.00
Baby health department	1,272.55
Ticket Auditing	479.00
Speed department	1,107.00
Horse department	1,753.00
Art department	284.98
Horticultural department	199.11
Poultry department	490.00
Public safety	3,918.00
Machinery department	1,222.42
Agricultural department	916.31
Admission department	6,134.00
Day nursery	222.00
Dairy department	1,723.69
Campers headquarters	387.00
Boys and girls' judging contest.....	102.00
Program committee	1,038.59
Educational department	312.40
Cow Testing Association	171.05
Floricultural department	122.00
Electrical department	175.00

Forage department	912.00
Auto parking	280.00
Horseshoe pitching contest	28.00
Junior department	1,269.65
Live stock sanitation	216.00

\$35,092.91

Mr. Mullen moved that the payrolls as presented by the officers and superintendents be approved and that the secretary be instructed to issue expense warrants covering the amount of each payroll and deposit same with the Central State Bank to the credit of each superintendent's payroll account, and that the superintendents be authorized to issue payroll checks against said accounts. Motion seconded and carried.

The following resolution relative to the resignation of Mr. C. H. Turk as assistant superintendent of the machinery department was presented by Mr. Mullen, who moved its adoption. Motion seconded by Mr. Reeves and carried.

"Whereas, After twenty-five years of faithful and most efficient service in contributing to the upbuilding of the Iowa State Fair and Exposition, Mr. Charles Turk, assistant superintendent of machinery, has found it necessary to tender his resignation, and

"Whereas, This board feels that in the departure of Mr. Turk the Iowa State Fair and Exposition is losing one of the most valued members of its staff and one who has had a large part in the development of the institution,

"Be It Resolved, That we, the board of directors of the Iowa State Fair and Exposition, accept with sincere regret the resignation of Mr. Turk and express to him at this time the appreciation which the institution owes him for the many years of efficient service which he has devoted to it with such unflinching energy.

(Signed) C. E. CAMERON, President.

J. P. MULLEN, Vice President.

A. R. COREY, Secretary.

"Adopted this 2d day of Sept., 1921, at Des Moines, Ia."

Mr. Corey presented the following petition, bearing the names of stock exhibitors and their families, requesting that hot and cold shower bath and sanitary toilets be installed in the exhibitors' camp east of the swine pavilion; also a cement foundation for the well east of the swine barn.

"We, The undersigned wives and families of the stock exhibitors, do respectfully petition our State Fair Association to put in a hot and cold shower bath and sanitary closet in the exhibitors' camp east of the swine pavilion; also a cement foundation for the well east of the swine barn.

Respectfully signed,

MRS. F. S. TAYLOR, What Cheer, Iowa.

(and 107 others)."

Mr. Tow recommended that the present toilet and shower bath rooms in the swine judging pavilion be partitioned off, providing showers and bath rooms for both men and women.

Mr. McHenry moved that the improvements as requested in the petition and the recommendations made by Mr. Tow be carried out, and that the secretary acknowledge receipt of the petition and report that the board has taken favorable action upon same. Seconded by Mr. Reeves and carried.

Mr. Curtiss moved that the State Board of Agriculture express to Colonel Brown and to the Fourteenth Cavalry Troop their cordial appreciation of the excellent drills and fine entertainment furnished at the night horse show under the direction of Captain Gerhardt. Motion seconded by Mr. Mullen and carried.

It was moved and seconded that the expense of \$25.65 for the secretary's meals at the club dining hall be allowed. Motion carried.

Mr. Weaver moved that the matter of settlement with the street car company be left in the hands of the executive committee with power to act. Seconded by Mr. Davis and carried.

On motion the board adjourned to meet at the call of the president.

EXECUTIVE COMMITTEE MEETING

October 7, 1921

Committee met with Cameron, Mullen and Corey present.

The committee approved the contract made by the secretary with the Midwestern Racing Association, Roy Welch, manager, for the use of the race track on Saturday, October 8, for the purpose of putting on motorcycle races. The compensation to be 10 per cent of the gross receipts.

The committee met with Major Park A. Findley and Captain Gill, representing the National Guard Cavalry stationed just north of the fair grounds. Major Findley stated that the cavalry would like the privilege of using the stock pavilion as a riding hall during the winter months. The executive committee made a proposition that if they would pay for the light used and one-half the expense of replacing the tan bark in the ring each year, they might have the use of the pavilion without any additional charge.

The committee visited the fair grounds and instructed Mr. Deets, superintendent of grounds, to enclose the alleyway back of the sale ring as per instructions. This to include raising the brick wall about four feet and placing a floor above the alleyway.

The committee also instructed the superintendent of grounds to plow the inside half of the race track and cover same with a good heavy coat of well rotted manure, leaving the outside of the track in good shape for winter training.

The committee also discussed the plans for the annual meeting, and it was suggested that arrangements be made for the executive committee to meet the program committee of the Iowa County Fair Managers' Association for the purpose of arranging the joint program.

The committee met with Mr. Waymack, managing editor of the Register and Tribune, and Mrs. Schultz, society editor, and other representatives

of the Register and Tribune, for the purpose of discussing a plan to select the most beautiful girl in the state of Iowa who is to be queen of the 1922 fair.

After a lengthy discussion a tentative plan was agreed upon whereby the Register and Tribune would promote the contest and select the most beautiful girl in each county in the state. From the county winners was to be selected one girl to represent each congressional district. The eleven girls representing the congressional districts to be brought to the Iowa State Fair, and the queen of the fair to be selected from this group of eleven girls.

The committee agreed that the fair management would pay the expenses of the eleven girls to the fair providing the expenses did not exceed five hundred dollars; the Register and Tribune to pay all other expenses and to promote the contest through their daily papers.

The committee also discussed the proposition submitted by A. H. Headlough, secretary of the National Horseshoe Pitchers' Association of the United States. The committee agreed that they would recommend that the board appropriate one thousand dollars to be offered for the National Horseshoe Pitching Tournament in 1922 to be conducted at the Iowa State Fair. The secretary was instructed to write Mr. Headlough to forward the contract and also the budget covering the other expenses that the state fair management would be expected to take care of in putting on the tournament.

MEETING OF AUDITING COMMITTEE

October 20, 1921

Members present, Sheldon and Reeves.

The committee passed upon all bills that were paid by the secretary, with the approval of the executive committee, since December 8, 1920.

The committee also approved payment of all the unpaid bills on file.

EXECUTIVE COMMITTEE MEETING

October 21, 1921

Committee met with Cameron, Mullen and Corey present.

The executive committee met with the program committee from the County Fair Managers' Association at the Savery Hotel, for the purpose of planning the program for the County Fair Managers' and the State Agricultural Convention to be held in Des Moines on December 13 and 14.

The secretary presented to the committee a brief statement showing an estimate of the financial condition of the treasury when all bills were paid.

The committee instructed the secretary to withdraw \$20,000 from the savings account and place same to the credit of W. W. Morrow, treasurer, account and to take out a certificate of deposit for the \$20,000, dating same from October 2.

MEETING OF THE STATE BOARD OF AGRICULTURE

December 15, 1921

The board convened at 9:30 a. m. with President Cameron presiding. The following members responded to roll call: C. E. Cameron, J. P. Mullen, A. R. Corey, W. W. Morrow, H. O. Weaver, E. J. Curtin, C. A. Tow, C. F. Curtiss, T. C. Legoe, F. E. Sheldon, Sears McHenry and H. L. Pike.

The secretary read the minutes of board, executive and special committee meetings, commencing with the board meeting on February 1 at the State Agricultural rooms, and concluding with the auditing committee meeting October 20. On motion of Mr. McHenry, seconded by Mr. Weaver, the minutes were approved as read.

The secretary presented a bill of The Homestead Company, amounting to \$1,060, for printing the 1920 official catalog; also a bill of \$3,857, being final payment due on the contract for completing the cattle barn.

Mr. McHenry moved that the Homestead bill in the amount of \$1,060 be approved; seconded by Mr. Pike, and carried.

Mr. Pike moved that the final payment of \$3,857 on the contract for completing the cattle barn be allowed and a warrant drawn for this amount. Seconded by Mr. Weaver. Motion carried.

On motion of Mr. Curtiss, seconded by Mr. Legoe, the board adjourned sine die.

The board immediately re-convened and Mr. B. W. Garrett, clerk of the supreme court, administered the oath of office to the newly elected officers and members of the State Board of Agriculture: Cameron, Mullen, Weaver, Ferris, Tow, Curtiss, Hoffman and Pike.

The following members answered the roll call: Cameron, Mullen, Corey, Morrow, Weaver, Ferris, Curtin, Tow, Legoe, Curtiss, Sheldon, Hoffman, McHenry and Pike.

The next order of business was the election of a secretary and treasurer.

Mr. Weaver moved that Mr. A. R. Corey be re-elected secretary and his salary fixed at \$4,000 per year as provided by law, and that he be allowed the use of the house on the fair grounds, pasture for a cow, gasoline and up-keep of his automobile to be taken care of out of state fair funds. Also that he be required to give a \$10,000 surety bond, the premium to be paid out of the funds of the department. The motion was seconded by Mr. Mullen and carried unanimously.

Mr. Mullen then moved that W. W. Morrow be elected treasurer for the ensuing year at a salary of \$250 per year and traveling expenses as provided by law, and that he be required to give a personal bond of \$100,000. The motion, seconded by Mr. Legoe, carried unanimously.

The selection of a superintendent of grounds was the next order of business.

Mr. Curtiss moved that the executive committee be authorized to employ a superintendent of grounds on the following terms: Salary, \$1,800

a year, use of house, privilege of downing wood, and of keeping three cows and not to exceed one hundred chickens, the State Fair Board to furnish the necessary gasoline and oil for his automobile. Motion seconded by Mr. Weaver and carried.

Mr. Curtiss moved that the executive committee recommend the superintendents of the various departments for the 1922 fair. Seconded by Mr. Legoe, and carried.

On motion of Mr. Weaver, the dates for the 1922 fair were fixed from August 23 to September 1. Motion seconded by Mr. Tow, and carried.

The matter of admission at the outside gates was then discussed at length.

Mr. Mullen moved that inasmuch as there is a tendency to go back to pre-war prices and conditions in all lines of business, that the price of admission at the outside gates to the Iowa State Fair be reduced from 75c to 50c. Motion seconded by Sheldon. Upon roll call, the vote was as follows: Ayes, Cameron, Mullen, Corey, Morrow, Weaver, Ferris, Tow, Legoe, Curtiss, Sheldon, Hoffman, McHenry, Pike. No, Curtin.

Mr. Curtiss then moved that a season ticket containing ten coupons, not good if detached from the book, be sold at \$3.75 up until the opening day of the fair and at \$4 after the opening date. Mr. Legoe seconded the motion. Motion lost.

It was then moved by Mr. Sheldon, seconded by Mr. Pike, that the board recess until 1:00 p. m. Motion carried.

Thursday, December 15, 1:00 p. m.

The executive committee recommended that the officers and directors act as superintendents of the department set opposite their name in the following list:

Public Safety—Carl Hoffman.

Admission—F. E. Sheldon.

Concessions and privileges—Sears McHenry.

Live stock sanitation—Peter Malcolm.

Horses, ponies, mules—C. F. Curtiss.

Speed—E. J. Curtin.

Cattle—H. L. Pike.

Swine—C. A. Tow.

Sheep—E. T. Davis.

Implements and machinery—J. P. Mullen.

Agriculture, cullinery and apiary—H. O. Weaver.

Dairy—State Dairy Commissioner.

Horticulture—Earl Ferris.

Exposition building—T. C. Legoe.

Mr. Curtin moved that the recommendations for the superintendents of the different departments as made by the executive committee be approved by the board. Seconded by Sheldon. Motion carried.

Miss Holden of the extension department of Ames, who has been actively connected with the work of that department put on in the Women and Children's building at the state fair, appeared before the board and

outlined a plan for a home demonstration contest to be put on by the different counties of the state, the nature of this contest to be somewhat similar to the county farm exhibits. Miss Holden asked that an appropriation of \$1,050 be made for this purpose.

Mr. Curtin moved that Miss Holden's recommendation, asking for an appropriation of \$1,050, be not granted, owing to the present financial conditions and the tendency on the part of the board to cut down all expenses and appropriations the coming year. Motion seconded by Mullen, and carried.

Mr. W. A. Cordingly and Mrs. Schultz appeared in behalf of the Register and Tribune and discussed at some length the contest planned for choosing the "Queen of the Iowa State Fair." This contest is to be carried out on a more elaborate scale than at first planned and the Register and Tribune has agreed to offer a prize of \$1,000 to the one chosen "Queen of the Iowa State Fair."

Mr. Weaver moved that the executive committee be authorized to appropriate not more than \$1,000 for the entertainment, while at the state fair, of the eleven girls, one to be chosen from each of the congressional districts in the state.

The next order of business was the matter of cutting down the expenses of the 1922 fair to conform to the anticipated receipts.

The secretary presented the following statement and suggestions for consideration of the Board:

Members of the State Board of Agriculture:

Gentlemen: Your attention has been called to the printed report and financial statement covering the year ending November 30, 1921. The statement shows a balance on hand November 30th of \$24,060.02.

The outstanding claims against the department December 1st, were as follows:

Balance due on cattle barn.....	\$3,857.35	
Printing 1920 official catalog.....	1,060.00	
Grounds pay roll last two weeks in November.....	173.00	
Landscape architect, September, October and November..	125.00	
Expense art exhibit	95.00	
Balance due on electrical supplies.....	96.00	
Gasoline bill	68.60	
Brick for sale ring.....	60.00	
Miscellaneous small claims	261.17	
Total		\$5,796.12

ACCOUNTS RECEIVABLE DECEMBER 1

Record associations, special premiums.....	\$ 627.50	
Advertising in premium list.....	445.00	
Cattle sale accounts.....	271.55	
Over-payment of premiums	100.00	
Forage bills	60.30	
Addressograph sold	63.02	
Pasture rent	883.75	
Stall rent speed barns.....	260.00	
Storage autos and trucks.....	232.00	
Total	\$2,943.12	
Collections since December 1.....	577.97	
Total		\$3,521.09
Accounts payable in excess of accounts receivable.....		\$2,275.03

Allowing a twenty-five per cent discount on the accounts receivable for bad accounts, and after paying the outstanding bills, there should be a balance for 1922 operations of about \$21,000.

Your attention is also called to a five-year comparative statement covering receipts and disbursements of the fair, type-written copies of which have been furnished each member of the board; also to the tabulated statement showing the amount of premiums offered and paid during the past ten years. By studying these comparative statements, it will be noticed that the expense of the fair commencing with the year 1917 increased by leaps and bounds up until the year 1920. Fortunately the receipts of the fair, during this period of four years, more than kept pace with the expense. This is evidenced by a profit of over \$111,000 on the 1920 fair. At the same time, it cost more to produce the fair in 1920 than in any previous year.

Your especial attention is called to the comparative statement in the printed report of receipts and disbursements for the year 1921. It will be noticed that the receipts in practically every department of the fair showed a marked decrease over the previous year. The big reduction, of course, shows up in the admission fees at the outside gate and the day and night grandstand.

By studying the comparative statement of the expense of the fair for 1921, it will be noticed that there was very little reduction in any department and no marked increase which cannot readily be explained. By eliminating the one item of \$10,682, the decrease in the cost of the forage, the expense of operating the 1921 state fair, other than premiums, was approximately the same as in 1920. On top of this, the premiums paid in 1921 show an increase of \$7,807.49 over 1920.

By studying the receipts of the fair over a longer period, it is apparent that if we will eliminate the two abnormal years of 1919 and 1920, that the receipts have shown a gradual increase each year.

In analyzing the expense of the fair for the same period, it will be noticed that the expense increased from \$189,533.38 in 1917 to \$299,287.29 in 1920. In 1921 instead of the expense being reduced in comparison with the receipts, it remained about the same as in 1920, after eliminating the difference in the cost of forage.

I think it is clear to every member of this board that the expense of the 1922 fair must be adjusted to fit the anticipated receipts. I do not believe that the board should anticipate making a profit on the fair the coming year; neither should we figure on as close a margin as we did during the year 1920. I am assuming that the board will reduce the admission fee at the outside gates from 75c to 50c and leave the admission fee at the grandstand the same as last year. Estimating the attendance at 300,000, or about the same as it was in 1921, this would reduce the receipts from ticket sales about \$28,000. I think we should also anticipate a decrease in the receipts in practically every department, especially the concession and machinery departments.

In conferring with a number of the fair managers in Chicago during the meeting of the International Association of Fairs, there seemed to be

a general disposition among the fair men to simply forget about the past three years and to go back to about the year 1918 for a basis of estimating the receipts and for making up the budget for the fairs in 1922. The total receipts of the Iowa State Fair in 1918 were \$251,196.62 and the total expense, \$202,089.76. The attendance in 1918 was 324,377, which is larger than we should anticipate for 1922. On the other hand, the receipts from several departments should show a sufficient increase over 1918 to offset this difference in receipts and ticket sales.

As I have already stated, I do not believe that the board should anticipate making any profit on the 1922 fair. Therefore, if the board can arrange their budget of expense for the 1922 fair so that the total cost will be in the neighborhood of \$250,000, I believe they would be safe in anticipating that the receipts would take care of the expense. To bring this about, however, it will be necessary for every department superintendent to co-operate and share in the reduction. To reduce the expense of the fair in 1922 about \$47,000 will require a lot of careful work on the part of some one and I am satisfied that it can be worked out to the best advantage by adopting the budget system for all pay rolls, premium offerings and other expense of the fair, the budget to be worked out by a committee selected by the board at this meeting. The committee should make up the budget in detail for each department and report to a meeting of the board to be called the fore part of February.

Mr. Curtiss moved that the executive committee be instructed to limit the expenditures for attractions for the 1922 fair to \$30,000. Motion seconded by Mr. McHenry, and carried.

The subject of pay rolls for all departments for the 1922 fair came up for a lengthy discussion, and it was the consensus of opinion that there must be a general cut in all departments. The following approximate amount to be expended in each department was agreed upon:

COMPARATIVE STATEMENT OF EXPENSE OF 1918-1919-1920 AND 1921
STATE FAIRS WITH ESTIMATE OF BUDGETS FOR 1922

	1918 Fair	1919 Fair	1920 Fair	1921 Fair	Estimated 1922

Mr. Curtin moved that the premiums in the horse, cattle, swine, sheep departments be cut twenty per cent. Motion seconded by Sheldon, and carried.

Mr. Legoe moved that the amount of premiums offered in the educational department be reduced from \$1,000 to \$800. Seconded by Mr. Tow, and carried.

Mr. Weaver moved that the premiums on county exhibits be reduced from \$300 to \$250, and on the individual farm exhibits from \$150 to \$125. Motion seconded by Mr. McHenry, and carried.

Mr. Weaver called attention to the fact that the Wool Growers' Association had made an excellent exhibit this year, but was somewhat handicapped on account of lack of sufficient space and suggested that a larger space be allowed them another year.

Mr. McHenry moved that the exhibit in Floriculture Hall be discontinued and that the sum of \$500 be appropriated to the horticultural department for a display of gladioli and other seasonable flowers, and that they be displayed and used in decorating the Agricultural building. Motion seconded by Mr. Ferris, and carried.

Mr. Curtiss suggested that at the time of the February board meeting the board invite the editors of the local daily newspapers, a committee from the Retail Merchants Bureau, and from the Chamber of Commerce and Greater Des Moines Committee, to a luncheon with a view of gaining greater interest on the part of these organizations in the state fair.

Mr. Curtin moved that the action of the executive committee in accepting the proposition of the National Horseshoe Pitching Association to bring the national tournament to the Iowa State Fair in 1922 be approved, the state fair board to contribute \$1,000 and prepare the courts. Motion seconded by Mr. McHenry, and carried.

Mr. Curtin moved that \$350 be appropriated for the state horseshoe pitching contest under the same conditions as last year. Seconded by Mr. Mullen, and carried.

Mr. Weaver moved that the matter of procuring transformers for the state fair grounds be referred to the executive committee with authority to purchase the necessary transformers. Seconded by Mr. McHenry. Motion carried.

Mr. Curtiss moved that all unfinished business be delegated to the executive committee with power to act. Seconded by Mr. Sheldon. Motion carried.

EXECUTIVE COMMITTEE MEETING

December 16, 1921

Members present: Cameron, Mullen and Corey.

The executive committee instructed the secretary to withdraw \$5,000 from the time deposit and place same to the credit of the W. W. Morrow, treasurer, checking account.

The committee approved payment of bills which were paid by the secretary since the first of December.

The secretary was instructed to keep in touch with Lieut. E. E. Jackson of Camp Dodge, with a view of purchasing a number of small transformers to be used at the state fair grounds; also to communicate with General Lasher and the executive council with regard to purchasing the three 350 k.w. transformers located on state grounds at Camp Dodge to be used in the transformer station at the fair grounds.

Arrangements were made during the annual meeting for the meeting of the Northwest Iowa Fair Circuit and the Iowa-Nebraska-South Dakota Racing Circuit at Sioux City on January 3. The committee authorized the executive committee and Mr. E. J. Curtin, superintendent of the speed department, to attend this meeting.

PART II

Proceedings of State Agricultural Convention Des Moines, Iowa, Dec. 14, 1921

The convention was called to order at ten o'clock a. m., Wednesday, December 14, 1921, by President C. E. Cameron, in the House Chamber at the State House, Des Moines, Iowa.

Vice President J. P. Mullen: The first number on the program will be the address of President C. E. Cameron.

President C. E. Cameron: Gentlemen of the Convention and Members of the Board of Agriculture:

We have met again in annual convention to transact the necessary business of the Society, to greet old friends and to form new acquaintances.

As you know, the success of the Department of Agriculture depends somewhat upon the prosperity of the State. During the past season, Iowa has passed through a period of financial depression that has never been equaled, when her granaries are bursting with the products of the soil. We have, it is true, seen close times in Iowa in years gone by, but these have been due usually to a part failure of crops. During the last couple of years we have been stepping too fast and could not bring ourselves to a realization of the fact that the high prices and good times would not continue. I think now we have reached the bottom and, no doubt, have received a lesson that will be with us for years to come, and that is,—that we must not anticipate too much upon future prospects.

I remember a few years ago we were running along so smoothly that we anticipated the receipts of the fair and made permanent improvements on the fair grounds to the amount of forty thousand dollars, and that year was the only one since my connection with the fair that the fair did not pay out. This was in 1915, the year of the heavy rain and wind that blew so many tents down. It looked, after that storm, as if we would not be able to continue the fair, but we did, and when the fair was over and the balance sheet made up, we found that we were five thousand dollars behind on the fair, and forty thousand in the anticipated receipts that we figured on, making a total of forty-five thousand dollars that we were in debt. We could not go to the State to reimburse us, as the State has never appropriated one cent to carry on the fairs. Our credit, however, was good so we went to one of the banks and were told that if we would give our individual note, with all the members signing it, they would let us have the money. This we did, and the next year our profits were enough to take

up the note. We learned a lesson on anticipated receipts, and as soon as we could we put by a surplus to carry us over, and it was well that we did. At the commencement of the last fair, 1921, we had a forty thousand surplus to draw upon, which was very fortunate for us as the fair this year a little more than broke even. There were some improvements on the cattle barn and other buildings that we felt we had to make, so we drew on the surplus to the amount of about twenty thousand dollars, which still leaves us a little over half. It was wise we took this precaution for I do not know of any bank that would advance us the twenty-five thousand dollars at this time.

We felt, in preparing for the 1921 fair, that we could not afford to reduce our premiums, especially in the stock and agricultural departments, but rather that they should be increased so as to encourage the exhibitors all we could. This we did, and you, who visited the fair this year, saw the greatest exhibits on our fair grounds that we have ever had. Experts who visited our fair pronounced it the greatest exhibit that was ever shown on any fair or exposition ground, so we felt well repaid for the extra money we added to these departments. While our attendance, in comparison with that of last year, fell off about twenty-three per cent, it was the third largest in the history of the Society. This falling off in attendance was due to several reasons. First, in my opinion, was the low price of farm products, and the tightness of the money market. No doubt, as I have heard a great many people say, the shutting down of the street car service before the fair kept a great number away, and we were not able to make satisfactory arrangements to have the cars run in time to have these people change their minds about coming, so that was the reason they did not attend this year.

I may be treading on dangerous ground in making the following statement, but it is in my system and I must get it out, and that is relative to the conditions the Iowa farmer is in and I presume the same is true of the farmer in all the other agricultural states. The farmer is the most optimistic business man. He never shuts down his factory, never calls a strike, and when the government called on him to buy bonds he more than went the limit, and after the Armistice was signed and he was told the condition the world was in and that he would have to produce more than ever before in order to take care of the people in the foreign countries and keep them from starving, he dug in and produced, in the last two years, the largest crops that we have ever raised. With what results? Prices have gone down to one-half the cost of production, the bonds that he bought from the government, and in a great many instances had to give his note for, dropped almost twenty per cent at the same time that the prices of farm products had gone down, and the farmer was in a quandary as to what to do—whether to sell his bonds or his crop. He, at last, decided to sell his bonds, and after the great bulk of them had been disposed of to the capitalist, they commenced to go up and today are worth almost par, and the farmer keeps on producing the necessities of life at about one-half the cost of production. Would you not call him an optimist in the true sense of the word?

I presume you are anxious to know of the future. The government is trying to help the farmer along with the heavy burden he is carrying by establishing the War Finance Corporation. This only extends the credits he has already made. What the farmer wants more than anything else is a fair compensation for the work he is doing, and that means a fair price for the crops he is producing.

During the war we loaned to foreign countries about ten billion dollars to help them carry on the war and they were to take it all out in munitions and other commodities to carry on the war. Now these countries owe us this money and there has been quite a discussion as to whether they will ever be able to pay this back. They never will unless they are able to work, and they cannot work unless they are fed, but they have no money to buy our foodstuffs, with which our granaries are filled to overflowing. As an illustration, if you have loaned a man a sum of money and you feel that you have loaned him all that he is entitled to, but he comes to you and says that he will have to have a little more to carry him through, you look at it in a business way and, in order to save what you have already invested, you comply with his request. That is just the way I feel about our foreign loans. Let the government advance them another billion, if necessary, to be taken out in farm products. Then they will go back to work and try to help themselves and by so doing will, at the same time, drive away the long faces from the producers of our country, and thus all the people will be benefited, for it has always been said that the prosperity of our country depends largely upon agriculture, and when the farmer is doing well all other lines of business feel the effect.

Iowa is all right. It might be said that her land values increased a little too strong during the boom time, but I do not anticipate any great reduction in the price of farm lands, for Iowa has the reputation of never having a crop failure. She always raises more than she consumes and has some to sell, and she will come out of the financial difficulty as did the old salamander out of the fire.

The secretary, Mr. Corey, has gotten out a complete report of the 1921 fair, and I am sure we are all pleased with the showing that has been made under the existing conditions.

This year this convention is made up of ninety-two county and district fairs with a few members from the county institutes, and I want to give you managers of these institutions a word of encouragement for the coming year. You know there is always a silver lining to every cloud. Go home with the determination to make the 1922 fairs the best in their history, with the least possible expense.

President Cameron: The next thing in order is the appointment of committees. I will appoint as a Committee on Credentials, F. E. Sheldon, Mt. Ayr; Roy Rowland, Mahaska; Mose Stanbery, Webster. Committee on Resolutions, W. G. Smith, Lyon; S. D. Quarton, Kossuth; R. S. Johnston, Louisa county.

We will next have the report of our secretary, Mr. A. R. Corey.

Secretary A. R. Corey: Mr. Chairman and Gentlemen of the Convention: For the past two or three years it has been customary for the secretary to have his report printed and distributed at the convention. The same policy has been followed this year, so there is not a great deal for me to say. My report was distributed to the County Fair Managers Convention yesterday.

There are just one or two things I would like to say. It was only a few years ago that our Board hoped and anticipated an attendance at the Iowa State Fair of 300,000. That figure was reached in 1918 and in 1919 we went over 400,000. The point I want to bring out is this, the attendance at the Iowa State Fair this year was almost 300,000, which was a wonderful attendance considering the population of the city in which the fair is held.

In regard to the finances of the fair, as I stated yesterday, after the close of the Iowa State Fair and we checked up with the treasurer we found out we just a little more than broke even. Some of us thought we had not made a very good showing, but at our convention in Chicago last week we talked with fair managers from all parts of the United States and we rather congratulated ourselves to think we came out with a small balance on the right side of the ledger. One state fair at the national meeting last week reported a loss of \$142,000 in operating expenses, and any number of them lost or showed a reduction in receipts over 1920 and some as much as fifty per cent. In my report here I have tried to cover all the different departments of the fair. The itemized financial statement covers all of the receipts and expenditures. There are additional tables covering ticket sales. I have tried to reflect the true financial condition of the fair. There is also published in the back part of this report a copy of the treasurer's report and also a certificate from the bank showing the balance on hand the first of the month.

REPORT OF SECRETARY.

A. R. COREY.

For Iowa Department of Agriculture and the Iowa State Fair and
Exposition.

For the convenience of the delegates in attendance at the County Fair Managers Convention and the State Agricultural Convention, I am submitting herewith a printed report covering the activities of the State Board of Agriculture for the past year.

A complete report covering the work of the Department of Agriculture will be made in the Iowa Year Book of Agriculture; also a supplement to the Year Book containing the report of the stallion registration division.

The Thirty-ninth General Assembly increased the appropriation for the support of the Iowa Weather and Crop Service Bureau from \$3700 to \$7500 annually and provided that the farm and crop statistics collected by the township assessors shall be compiled by that Bureau for publication in the Year Book of Agriculture. This change in the law places supervision and compilation of these statistics in the hands of experienced statisticians, and with the additional appropriation makes it possible to handle the statistical department in a satisfactory manner.

The Department has published bi-monthly the publication known as "Greater Iowa." This publication has a circulation of approximately 18,000, and its purpose has been to further the interest of agriculture and live stock in the state of Iowa and give publicity to the Iowa State Fair.

The supplement to the Year Book containing a report of the stallion registration division; also a directory of all stallion owners, will be published early in the year 1922. During the period from January 1 to November 1, 1921, the Department has enrolled and issued certificates as set forth in the following tabulation:

	No. Issued	Fees	Total Fees
Pure Bred Stallions:			
Original Certificates -----	306	\$ 1.00	\$ 306.00
Renewal Certificates -----	1,952	1.00	1,952.00
Transfer Certificates -----	466	.50	233.00
Grade Stallions:			
Original Certificates -----	58	1.00	58.00
Renewal Certificates -----	306	1.00	306.00
Transfer Certificates -----	50	.50	25.00
Pure Bred Jacks:			
Original Certificates -----	86	1.00	86.00
Renewal Certificates -----	490	1.00	490.00
Transfer Certificates -----	132	.50	66.00
Grade Jacks:			
Original Certificates -----	53	1.00	53.00
Renewal Certificates -----	234	1.00	234.00
Transfer Certificates -----	55	.50	27.50
Duplicate Certificates issued -----	1	.50	.50
Back fees collected -----	278	1.00	278.00
Total -----			\$ 4,115.00
Deposited with treasurer -----			\$ 4,115.00

COUNTY AND DISTRICT FAIRS

During the season of 1921 ninety-two county and district fairs were held in the state of Iowa and made reports to the Department of Agriculture covering their activities and for the purpose of securing state aid.

The state aid paid the fairs this year amounted to \$157,690.90. This was an increase of \$44,677.66 over the amount paid in 1920.

Considering the financial conditions during the past season, the county and district fairs made a very good showing. The effect of the depression, however, is apparent, both in the attendance figures and the financial results. The total attendance of the ninety-two fairs was 1,476,042 compared with 1,806,033 in 1920. The total paid admissions were 1,209,283 in 1921 and 1,456,755 in 1920. The admissions to the day and night grandstand shows showed a corresponding decrease.

The total receipts of the ninety-two fairs were \$1,275,802.04 compared with \$1,417,604.46 for the 1920 fair. The receipts from subscriptions, stock sold, etc., were \$247,559.48 and the balances on hand, at the beginning of the season, \$130,191.35, making the total receipts \$1,653,552.87.

The total expense of these fairs was \$1,223,072.66. Indebtedness of previous fairs paid during the current fair, \$106,042.12; for improvements and maintenance, \$286,033.04, making the grand total disbursements, \$1,615,148.22. Sixty-six fairs show a balance on hand of \$88,755.98 as compared with a balance of \$162,332.03. Fifty-four fairs showed a profit of \$108,234.87 and thirty-eight showed a loss of \$55,505.49, leaving a net profit of \$52,729.38. These figures take into consideration only the receipts and operating expenses of the fairs. The expense of maintaining the building and grounds and all improvements, and interest on indebtedness must, of necessity, come out of these profits or from funds derived from stock sold, subscriptions or other sources, amounting to \$247,559.48. Twenty-one fairs showed over-drafts in the sum of \$50,351.33 against over-drafts of \$21,285.85 for 1920 fairs. The present interest-bearing indebtedness amounts to \$1,076,848.45 compared with \$901,367.79 at the close of the year 1920.

Tables 1 and 2 set out the receipts and disbursements of the fairs in detail. Table 3 shows the number of exhibitors at these fairs, the number of head of live stock exhibited in the various departments and the amount of cash premiums paid in each division. Table 4 shows the attendance, number of paid admissions at the outside gates; also the admission fees charged at the outside gates and grandstand, and the number of admissions to the day and night grandstand performances.

The subject of rain insurance has been considered by a great many fairs for the past few years, but up until 1920 not many of the Iowa fairs took advantage of this protection against loss from a rainy week. This year the fairs were asked to make a report on this subject and we find eighteen fairs carried insurance in various forms. The total amount carried was \$221,500, the premiums paid \$18,359.80 and the losses collected by the twelve fairs having rain was \$56,811.17. It is needless to say that the rain insurance business in the state of Iowa was not very profitable from the insurance companies' standpoint. The following tabulation gives a list of fairs carrying insurance, the form of insurance, amount carried, cost of insurance and the losses collected by these fairs:

Location of Fair	Form of Insurance Carried	Amount of Insurance Carried	Cost of Insurance	Amount Collected
Algona.....	Gate receipts	\$ 11,000.00	\$ 880.00	\$ 1,450.95
Clarinda.....	Gate receipts	10,000.00	672.00	536.77
Decorah.....	Expense of Fair	5,000.00	300.00	-----
DeWitt.....	Total receipts	8,000.00	940.00	-----
Davenport.....	Total receipts	40,000.00	5,488.00	9,000.00
Eldora.....	Total receipts	8,000.00	358.00	-----
Elkader.....	Expense of Fair	7,000.00	350.00	-----
Fairfield.....	Gate and grandstand	12,000.00	691.00	3,255.04
Fort Dodge.....	Expense of Fair	35,000.00	2,100.00	11,956.00
Hamburg.....	Expense of Fair	6,000.00	540.00	2,548.28
Independence.....	Expense of Fair	12,000.00	504.00	6,124.00
Mason City.....	Total receipts	12,000.00	720.00	2,811.00
Manchester.....	Total receipts	17,000.00	1,020.00	5,732.38
Osage.....	Expense of Fair	6,000.00	480.00	-----
Perry.....	Gate receipts	4,500.00	300.00	-----
Shenandoah.....	Gate receipts	10,000.00	1,344.00	2,129.50
Vinton.....	Gate receipts	12,000.00	1,320.00	9,055.75
Webster City.....	Total receipts	6,000.00	352.80	2,181.50
Total		\$221,500.00	\$ 18,359.80	\$ 56,811.17

TABLE NO. 1—RECEIPTS AND DISBURSEMENTS OF

Number	County, City or Town	Receipts

IOWA STATE FAIR

The 1921 Iowa State Fair probably served a greater mission and was of more substantial benefit to those who attended it than any exposition previously held in the history of the state, and this was the sixty-seventh.

While the attendance fell approximately eighteen per cent below the average of the four previous fairs, this did not minimize the value of the big show to the state at large. Thousands of farmers who attended gained inspiration with which to face the difficult times ahead. Business men brushed shoulders with these same farmers and were impressed by the power and importance of the agricultural industry of the state, and obtained the farmers' viewpoint on many problems which are puzzling business at the present time.

Of no less importance was the work of the women from both farms and cities who joined to participate in a program which will bear much fruit in working for the future welfare of the state at large.

One of the most impressive features of the fair was the manner in which the live stock breeders of Iowa and the Middle West turned out to demonstrate their faith in the solidity and future of the live stock business. Visitors, who had come to the exposition expecting to find partially filled barns and pens with a pick-up showing, received the surprise of their lives. All barns and pens were well filled with a class of stock which won the admiration of the breeders and judges from every part of America. There was practically 5,500 head of live stock on the grounds exhibited in the different divisions as follows: 1210 head of cattle; 577 head of horses; 2847 head of hogs; 643 head of sheep, and 54 milk goats. The only department showing any appreciable falling off was in the swine department. This was due to the fact that the Board limited the number of entries to the capacity of the permanent swine barn and a large tent for housing the 460 pigs shown by Iowa boys and girls.

While the number of swine exhibited did not quite equal the showing in 1920, it was by far the best quality show and more animals were led into the ring to be passed upon by the judges than at any previous fair.

The cattle show this year was one of the largest ever held at the Iowa State Fair. Twelve hundred and ten head of exhibition cattle were housed in the new brick cattle barn. Of this number 145 head of baby beeves and 47 pure bred heifers were shown in the boys' and girls' club department. Competent judges and the agricultural press seem to be almost unanimous in their opinion that it was the greatest quality showing of cattle ever held at the Iowa State Fair. It is also conceded to be the largest cattle show held in connection with any state fair in America this year.

In the horse department, the show was uniformly well balanced. Strong competition was found in all draft horse classes, with the finest specimens of the breed competing. The showing of saddle and harness horses was without question considerably above the average, both in number and quality, and included some of the finest stables of show horses in the Middle West.

The live stock and horse show in the live stock pavilion each evening provided a treat for the admirers of the horse and was well attended, standing room being sold on Monday and Tuesday evenings.

The sheep entries totalled 643 and it was considered an excellent showing by the breeders in the face of present conditions. The Iowa Fleece & Wool Growers' Association set a new standard for wool exhibits this year, attracting wide attention on the part of all fair visitors.

A total of 54 goats were entered in the goat department.

In spite of the fact that the greatest interest among farmers centered in the live stock competition and live stock judging, the agricultural department, and more especially the section devoted to the county and individual farm exhibits, attracted wide attention. These exhibits were the backbone of the agricultural showing and consisted of twenty county exhibits and thirteen individual farm exhibits. This was an increase of three county exhibits over last year. The quality of the products exhibited and the manner of arrangement and display was excellent. Polk county carried off the grand championship in the county exhibit class.

One of the most valuable and educational features of the fair to the farmers and stockmen was the Cow Test Association exhibit and the pure bred sire exhibit in the brick cattle barn. This exhibit brought out, in a forceful manner, the necessity of testing dairy cattle, and also some striking results in the use of pure bred sires. The various generations of offspring of pure bred sires and

scrub cows was shown in comparison with those of scrub bulls and scrub cows. In the Cow Test Association exhibit there were displayed charts giving the milk production and comparison of the various cows on exhibition. In the pure bred sire exhibit, several generations of animals on display showed marked improvements in the type of beef qualities brought about by using the pure bred sires.

The Iowa boys and girls, as in 1920, produced a junior fair which was notable both in size and quality. In the pig club classes there were 204 boy and girl exhibitors showing 460 pigs. The boys' and girls' calf club was likewise well represented and brought out keen competition. One hundred and forty-five baby beeves, 47 pure bred heifers, 35 pure bred lambs and 960 birds in the poultry department were shown by the junior exhibitors. The crowning feature of the junior fair was the boys' and girls' club parade in front of the grand stand on Wednesday afternoon, August 31. This parade with its long lines of prize winners served better than anything else as a testimony of the fact that the future of Iowa's agriculture is in good hands.

The Iowa State College of Agriculture at Ames staged a wonderful exhibit in the large exhibition room under the grand stand. This exhibit covered practically all activities of the College and contained many interesting and educational exhibits. The new booths which were provided by the fair management greatly improved the appearance of the exhibit. In conjunction with this exhibit, the Public Speaking Bureau of the Iowa State College presented three plays daily in The Little Country Theatre. The purpose of the demonstrations was to show how any community might provide its own entertainment by putting on plays of this nature.

In spite of unfavorable business and predictions that the farmers would refuse to purchase more new and modern farm equipment until grain and live stock prices were higher, manufacturers of agricultural implements and farm home conveniences staged a monstrous show at the 1921 fair. The forty acre tract devoted to farm machinery, etc., was well filled with gas engines, tractors, silos, plows, mowers and practically every other known type of agricultural implement. The majority of the firms represented declared that they were inspired by the optimistic attitude taken by the farmers in attendance. While the sales were not large, a number of sales were reported. This part of the exhibition was one

of the most valuable from the farmers' standpoint of any in recent years. Automobile and truck dealers, likewise confronted by a slim buying season, surprised visitors by the remarkably complete show in the machinery hall. Two-fifths of the hall was occupied by autos and trucks of all types and designs.

Campers enjoyed an ideal outing period during this year's exposition. The weather was ideal for tenting out and the camp grounds were well filled throughout the period of the fair. The Farm Bureau and County Agent camps were larger than usual, with at least five hundred Farm Bureau members registered. Tents were grouped by counties in order that neighbors might be together, and likewise a section just across the street from the Farm Bureau camp was set aside for the County Agent camp. Everything was done to promote the comfort of the visitors and comment was made on the clean sanitary condition of the camp throughout the period of the fair.

During the first three days of the fair the camp attendance was greatly augmented by the 88th Division Reunion. More than 1700 veterans of the Division were housed in the big tent city situated in the upper part of the grounds on the site occupied by the 168th Infantry in 1917. The veterans extended a vote of thanks to the fair management at the close of the Reunion, expressing their appreciation of the cooperation given in making the first Reunion successful.

The new method of handling campers at this year's fair as a general proposition met with the approval of the campers. Instead of being aroused at six o'clock in the morning by ticket collectors, campers were allowed to remain in their tents as late as they desired, turning in their tickets at the turn stiles newly erected between the main exposition grounds and the camping tract. The new fence separating the two areas also served to provide greater privacy for the campers. An additional convenience for the campers, which, no doubt, will be provided another year, is an exit gate from the camp grounds, making it possible for campers to pass out in going to the city. If this arrangement is made, the campers may leave the camp grounds through this exit gate and pay their regular admission when they return to the grounds through one of the main gates.

The attendance of the 1921 fair was 294,023. Compared with the years prior to the World War, a substantial gain in attendance was made. It was 20 per cent larger than that of 1915 and somewhat

larger than 1916. In comparing the attendance for the entire fair period with that of 1920, it showed a decrease of about $23\frac{1}{2}$ per cent. A similar falling off in attendance was reported by practically every large state fair in the Middle West this year. As a state fair normally reflects the business and agricultural condition in the territory in which it is held, this falling off was in keeping with other lines of business throughout the state of Iowa. The war and post-war attendance can hardly be taken as a fair index on which to judge the attendance, because of the prosperity of the country during those years and the freedom with which people generally were spending money.

Two inches of rain Tuesday night and one-half inch early Friday morning resulted in cutting down the attendance dependent upon the automobile. The inadequate transportation facilities between the city and the fair grounds not only cut the local attendance, especially after six o'clock in the evening, but also had a discouraging effect upon out of town attendance.

Tuesday, August 30th was the largest day of the fair in point of attendance. A total of 46,215 passed through the gates on this day. Friday, August 26th, ranks second with 44,088, and Monday, August 29th, was third with 41,898. Monday was Farm Bureau Day and probably one of the most important days of the fair from an agricultural standpoint. The big assembly tent where the Farm Bureau meetings were held was filled to overflowing. National Farm Bureau authorities came to the fair to speak to members of the organization and put on a program which was of practical benefit to every farmer who attended.

The attendance of World War veterans on Legion Day this year showed a marked increase over that of 1920. In 1920, 1217 war veterans took advantage of the free admission privileges, while 4211 were admitted on Legion Day this year. The Civil War veterans and their wives were not as largely represented during the fair as in 1920. A total of 1692 took advantage of this year's free admission as against 2566 last year.

More women, representing a wider field of interests, attended the programs and demonstrations in the women's department of the 1921 Iowa State Fair than ever before in the history of the exposition.

On the second day of the fair officials in charge of the women's building had to call for extra help to handle the crowds. Up to the

close of the fair practically every program, meeting and demonstration was crowded to capacity.

The program in the women's department this year was more elaborate than ever before. Practically every women's interest and activity in the state was represented.

As in former years, the baby health contest, with competitions both for city, town and rural babies, held the center of interest throughout the fair. Of equal popularity were the pageants and plays. The "Legend of the Rose", presented under the direction of Miss Essie Hathaway and carrying a cast of 50 costumed children, was one of the most pleasing features of the program. The Little Theater plays, supervised by L. Worthington Smith of Drake University, were also among the interesting items on the daily program. A state conference on the subject of the Little Theater brought out a profitable discussion for those in attendance and lent an added impetus to the work along these lines which is being conducted by the various cities at the present time. One of the most helpful features of the department was the Milk Fairy Pageant, put on by the State College in cooperation with the Dairy Council and similar interests.

The style shows were elaborate in the extreme this year. Twenty-five different dresses, cloaks and other articles of apparel were shown each day on living models. A runway through the audience assisted in the study of the various types shown.

Home economics lectures and demonstrations put on through the Extension Department of the State College were of wide interest and drew packed rooms each day. Canning, cooking and sewing demonstrations were equally popular.

The playground for children, under the Des Moines Playground Association, was an added convenience which appealed to mothers. Special supervisors were in charge of the play and all sorts of apparatus for the youngsters' enjoyment was provided.

The amusement program of the 1921 fair was easily the most elaborate and the most carefully planned of any ever arranged on the Iowa exposition grounds. Everything from Ruth Law's Flying Circus to the big night fireworks spectacle in front of the grand stand was selected from the finest outdoor entertainment offerings to be found in the country. Auto racing, horse racing, hippodrome, balloon ascensions, auto polo and similar features thrilled the crowds in front of the grand stand. Adding to the carnival spirit were eight bands, orchestras and drum corps, providing con-

tinuous music in various parts of the grounds from nine o'clock in the morning until the close of the night shows.

There is presented herewith extracts from write-ups of the fair from a number of the leading agricultural and live stock papers. These reports were written by representatives who spent the full week at the fair and had an excellent opportunity to study and judge the fair from every angle. The criticisms, which in practically every instance are of a constructive nature, as well as the praise of the fair, have been included in the extracts. These articles give an unbiased report of the fair, and no report of the fair that might be prepared would be complete without them.

FROM THE IOWA HOMESTEAD, DES MOINES, IOWA

The Iowa State Fair and Exposition, held at Des Moines last week, was a marked success from an educational point of view. It was one of the best, if not the best, exposition of Iowa's agricultural resources ever staged. It was not the largest show in every respect that has been seen at Des Moines, yet in most of the departments the exhibits were larger and better than usual. From the standpoint of quality, the big show undoubtedly surpassed the best fair ever held in Iowa.

Unfortunately, the attendance fell considerably below the records set in recent years. This is to be regretted because the real value to the state of a good fair is necessarily measured in terms of the number of persons who see it. The falling off in attendance could not be laid to the weather, because weather conditions were ideal throughout the entire 10-day period of the show with the exception of Thursday night, when quite a heavy rain fell. This undoubtedly reduced the attendance on Friday, the last day of the fair. The Iowa State Fair, however, is not the only one that has recorded a decrease in attendance this year. At most fairs held so far this season the same thing has occurred. The trouble lies with financial conditions. Crop prices are low, besides farmers are busier than usual this year for the reason that they are trying to get along with less hired help in order to keep down expenses. With these conditions prevailing many undoubtedly figured that they could not afford to attend the state fair this year or at any rate they came to the conclusion that state fair expenses could be curtailed.

While exact figures are not available at this time, a very close estimate of paid admissions place the number at 294,000 this year as compared with 384,000 last year and 406,000 two years ago. At first thought this might seem like a big falling off in attendance, yet we must not overlook the fact that the two previous years were record-breakers as compared with 1917 and 1918. When all receipts are in and all debts are paid, according to Secretary A. R. Corey, the books will undoubtedly be in balance. In other words, in spite of the comparatively small attendance this year, the fair association will practically come out even. If there should be any deficit, it will be a very small one. Total receipts up to and including Friday night amounted to \$281,558. This was \$104,-

000 less than had been taken up to the corresponding time last year and \$20,000 less than receipts up to Friday night in 1919. Everybody really expected a smaller attendance than the records made during the two previous years. Considering everything, the attendance of nearly 300,000 was really most satisfactory. In 1916 the attendance amounted to 291,000 and in 1915, to 245,000, so compared with those years no one has any reason for complaint. The fact of the matter is, that one can't escape the conclusion that interest in the state fair on the part of the farmer and his family is growing.

Tent City up on the hill looked like a most prosperous place this year. Close to 500 farm bureau members had tents in the farm bureau section and it is conservative to say that fully 3,000 men, women and children were housed on this part of the grounds, which was nearly twice as many as camped there last year. There were, of course, many additional campers, but these 3,000 were farm bureau members.

The big show itself was very superior. It was thought-provoking. As one studied the many breeds of live stock, each represented by the choicest individuals of its kind, the products of the breeders' skill and energy, one couldn't help realizing, in a measure at least, the important relation of agriculture to the welfare of the state as a whole. What would Iowa be, agriculturally speaking, if we didn't have our pure-bred herds of live stock and our improved grains? That the breeders of cattle, horses, hogs, sheep and poultry are making progress from year to year and that greater general interest is taken in the livestock exhibits at the fair was never more evident.

While the live stock was being judged, the judging pavilions were filled with interested spectators. This was particularly true of the hog pavilion where interest was intense and where the judge's every decision was critically examined and commented upon. The fair management deserves credit for the manner in which the whole show was handled. The advance work for the fair had been well done and the show had been well advertised. Every preparation had been made for the comfort alike of the exhibitor and the visitor and satisfaction was expressed by all with the treatment accorded them. There were no overcharges on the grounds this year. Prices were reasonable, but visitors did not spend as much money as usual. Concessionaires, therefore, in many cases lost money. They did not sell as much as they had expected to, but little complaint was heard on that score.

There probably isn't a farmer anywhere who has not read or heard about the value of pure-bred bulls for grading up scrub cattle, but to those who have had no practical experience along this line nothing is more convincing of the value of improved blood than to see the progeny from scrub cows and pure-bred bulls and to note their records either as beef or milk producers. Such an exhibit was seen in the cattle barn on the fair grounds last week. It showed the value of improved beef blood as well as of dairy blood for building up productive herds.

Crusty, a cow out of a grade Jersey and sired by a registered Red Polled bull, had a record of 6,582 pounds milk and 313 pounds butter fat, according to a cow-testing association. No record was available of Crusty's dam, but if there had been it would probably have been con-

siderably smaller. A daughter of Crusty—Posie—sired by a scrub bull produced only 4,047 pounds milk and 185 pounds butter fat. Here was an example of the damage a scrub bull can do to a herd. Posie produced 2,435 pounds less milk and 128 pounds less butter fat a year than her dam. Think what it would have meant had 20 cows like Crusty been bred to such a bull! Yet thousands of farmers are doing such things every year.

Another exhibit was a cow sired by a pure-bred Holstein bull and out of a scrub dam. Her yearly record was 5,469 pounds milk and 247 pounds butter fat. A daughter from this mating sired by a pure-bred Holstein bull produced 9,840 pounds milk and 420 pounds butter fat. Here was a second cross heifer that produced 4,371 pounds more milk and 173 pounds more butter fat per year than the first cross, showing remarkably rapid improvement. Nettie 2d, another first cross cow, produced 6,903 pounds milk and 241 pounds butter fat per year. Nettie's daughter sired by a pure-bred Holstein bull produced 7,610 pounds milk and 299 pounds butter fat in a year, showing an improvement of 707 pounds milk and 58 pounds butter fat. Still another exhibit was the cow Nigger, a grade Holstein, that yielded 4,438 pounds milk and 190 pounds butter fat. A daughter of hers sired by a pure-bred Holstein bull produced 9,008 pounds milk and 308 pounds butter fat in a year, showing an increase of 4,570 pounds milk and 118 pounds butter fat. The average production of these three first cross cows was 5,603 pounds milk and 226 pounds butter fat a year, while the second cross cows averaged 8,819 pounds milk and 342 pounds butter fat—showing an increase of 57 per cent in the yield of milk and 51 per cent in the yield of fat. Had every Iowa farmer been able to see this demonstration of the value of good dairy sires in herd improvement we believe that scrub and grade sires would soon go out of use.

An equally interesting demonstration of the value of good blood was seen in the boys' and girls' baby beef class this year where there were three calves sired by Lord Gainford, a six-year-old Shorthorn bull owned by Lewis & Williams, Marshalltown, Ia. One of these calves, Count Gainford, was out of a pure-bred Shorthorn cow and won first in the Shorthorn baby beef class. Another of these calves, Laddie, was out of Old Timer, an old red cow of unknown breeding. Laddie stood fifth in the same class of baby beeves.

Considering the fact that business has been dull this year for those engaged in the manufacture and sale of farm implements and machinery, the machinery display at the fair was exceedingly fine. Tractors, trucks, automobiles, gas engines, farm lighting plants, implements of tillage and other farm machinery were to be seen in large quantities on the grounds; in fact, the machinery display was most excellent, and those who made it are to be congratulated for their confidence in the future. This year no machinery men came to the fair with the expectation of many sales, but rather to show their goods to the public. Implement and machinery dealers were conspicuous by their absence from the fair, but exhibitors were well pleased with the interest shown by farmers. Tractor men saw no lack of interest in their machines, although they sold but few iron horses. All were convinced, however, that the future

of the tractor business is bright because manufacturers are constantly improving their machines and making them more serviceable and more practical for farm work.

There was an excellent display of trucks on the grounds. They are rapidly becoming invaluable to the farmer, as may be judged from the number in use on the farms of this state and surrounding territory.

The county exhibits in the agricultural building this year were the best ever. Taken as a whole, they were more attractive than usual in arrangement and general make-up. There were also more exhibits than usual—a total of 19, representing one-fifth of the counties of the whole state. Then, too, we believe they had greater educational value than in former years. Much constructive thought had been put into them. There seems to be an awakening of interest in these county exhibits with a tendency to have them tell a real story of the activities within the counties they represent. This feature might well be emphasized, as the possibilities along that line are almost endless. There should be more leeway for variations in the products shown. For example, one county, in which practically no wheat is grown, had to exhibit wheat in order to bring up the score. This should not be necessary. There should be an opportunity to substitute products for each other in such a way as to represent the agriculture of any county to the best possible advantage.

Pottawattamie county had the slogan "We grow our own soil builders," which was interesting. It caused inquiries to be made. The question at once arose in the minds of visitors as to what soil builders Pottawattamie county farmers grew. The answer was that they grew all the common clovers and alfalfa, but that they were growing thousands of acres of biennial white sweet clover, especially for fertilizing purposes. This clover is seeded with small grain as a nurse crop in the spring.

The individual farm displays numbered 14 and all were very tastefully arranged. Last year there were 13 exhibits in this department. There were no marked improvements over last year in products shown, but here again there is too little leeway permitted in displaying the special line of work conducted by individual farms and still be in line for prize money. More liberal rules might also be worked out in this class so as to allow individuality in different systems of farm management to be presented.

Though the Iowa apple crop was a failure this year, a real good display of apples and other fruit was seen in the agricultural building. In fact, Supt. E. M. Reeves, Waverly, declared that the exhibits in his division were fully up to the standard set in former years. One exhibit—a model farm orchard—was very helpful to those who are contemplating setting out fruit on the farm and aiming to take care of it. An acre of ground devoted to orchard purposes can easily be made the most profitable acre on the farm. Here is a list of varieties of apples recommended by the Iowa State Horticultural Society as shown at the fair: Two trees of Yellow Transparent, four of Northwestern Greening, six of Salome, two of Talman's Sweet, four of Wealthy, four of Malinda, two of Brilliant, three of Duchess, three of Fameuse, and one Whitney Crab. Of pears, two of Lincoln and two of Clap's Favorite were sug-

gested as most suitable. For southern Iowa the same varieties of apples were recommended, except that Jonathan and Grimes Golden should be substituted for Malinda and Northwestern Greening.

In the way of cherries it was suggested that there should be three trees of the Richmond and three of the Montmorency variety included in the farm orchard. Also some Concord, Woden, Moore's Early and Niagara grapes and some strawberries and a row or so of currants and gooseberries.

A large number of nuts were on display, to which Superintendent Reeves pointed with considerable enthusiasm, saying: "Farmers in Iowa are so much interested in corn and hogs that they never even give a thought to nuts, which can be raised at a big profit in this state if given proper attention. I hope that men who can forego an income from part of their land for a few years will set aside a few acres for producing some of the many good nuts that can be profitably grown in the state. They would be amply repaid for their efforts in a few years when the trees would come into bearing."

The state dairy and food commission had the largest display of high-class butter ever seen at the state fair. No fewer than 111 of Iowa's 425 creameries had butter on exhibition, and all was of very high quality. Nothing scored less than 87 points out of a possible 100, while the highest score was 98. Such a showing has never been made before. No less than 83 diplomas were issued, and since the butter had to score 92 points or better to be entitled to this award it can readily be seen that we have a lot of very efficient butter makers in the state.

Iowa's dairy industry brings an annual income of about \$150,000,000. That at least was the estimate of State Dairy Commissioner Barney for the year ending July 1, 1920. Owing to lower prices since then the figure for the year ending July 1, 1921, will be somewhat smaller. However, dairy products have suffered less from deflation than any other farm product. New York butter prices at the present time are only about five cents a pound below those that prevailed a year ago. Other dairy products have also held up comparatively well.

A cow and a dairymaid, made of butter and kept in a refrigerator—a real work of art—were admired by thousands of visitors. The cow, especially, was well done. There was scarcely a moment during fair week when this exhibit was not constantly observed by a score or more persons at the same time. It took over 500 pounds of butter to make this exhibit. The cheese display was very small and unimportant, but Iowa produces only about 790,000 pounds of cheese a year, while she produces 96 million pounds of creamery butter and about 40 million pounds of farm dairy butter. The state dairy council in cooperation with the state dairy commission exhibited a model cow done in plaster of Paris. The council also called attention to the high food value of milk. In this booth, figures were also shown that the man who sold dairy products last year received much better prices, relatively, than the man who sold grain. The only lesson one could draw from these figures was that dairying is still the safest enterprise on the farm.

The Iowa Fleece Wool Growers' Association, which has rendered a great service to its members in marketing their wool during the last

three years, was represented with a splendid exhibit of over 80 fleeces in the sheep building and another exhibit of blankets and automobile robes in the agricultural building.

This year the association sold 11,250 double blankets to its members in exchange for wool at current market rates. Next year, several other lines, like auto robes, etc., will be added.

The Iowa State College had a number of educational exhibits under the grandstand that called attention to some of the investigational work that is being done at that institution. One exhibit was of a 160-acre Story county farm as it actually is. On this farm, the following crops were grown this year: 45 acres corn, 31 acres corn, 4 acres corn, 4.4 acres corn, 5 acres clover, 4.5 acres rye, 3.8 acres hay, 8.4 acres pasture, 5 acres hay and 46 acres oats. Note that corn was grown in four fields, pasture in two and hay in two. In other words, the cropping system was without any plan. The fields were laid out in the exhibit exactly as they now are on the farm and crops were growing in them to represent the actual crops on the farm.

Adjoining this exhibit was a suggested improved plan, under which the farm was divided into five four-acre fields, four 28-acre fields and one 24-acre field. For the small fields the following rotation was suggested: Rye, clover, corn and rape, and corn and soy beans. For the large fields a five-year rotation of corn, corn, oats, clover and pasture was suggested. This improved plan made it possible to carry on a definite rotation of crops, save fencing, reduce labor costs and keep up the fertility of the land in better shape. The lesson taught was that it pays to devote some time to the management of the farm.

The department of chemistry of the college showed an experiment in withdrawing the so-called vitamins from the food of a rabbit. Two rabbits had been fed normal rations till they were full grown, at which time both were in perfect health. For six weeks the vitamins were withheld from rabbit No. 1, while rabbit No. 2 remained on a normal ration. As a result No. 1 became emaciated in about six weeks and lost his eyesight. No. 2 remained in good health. No. 1 was then given feed to eat which contains certain of the vitamins and it at once began to improve, but the blindness has not been overcome, and never will. The lesson was that the vitamins—which are all found in whole milk—are essential to animal health, and that milk is an exceedingly valuable food, because of its vitamin content as well as its other nutrients.

A soil map of Polk county was exhibited, which showed every type of soil found on every farm in the county as determined by a soil survey made of the county by the soils section of the college. Complete soil surveys have now been made of 40 counties in the state and seven more will be completed this year. Fertilizer tests are being conducted on the different soil types and records made thereof. When this work has been completed it will be possible for the college to give definite information in regard to the fertilizer needs of the soils on any farm in the state, and thus be of great assistance to farmers in the management of their soils from a fertility point of view.

Soy beans are rapidly becoming an important crop in Iowa for the silo, but seed, for hay and for hogging and sheeping down purposes. Attention was called by the farm crops department of the college to the varieties best suited for these purposes. For hogging down and for seed the Ito San and Manchu varieties were recommended—the former for the northern part of the state and the latter for the southern portion.

BEEF CATTLE.

The beef cattle show was very fine from a quality standpoint. From a numerical point of view, however, it was not so good as it was a year ago but compared favorably with the 1919 show. Though few sales were made on the grounds, breeders appeared to be in good spirits. Most of them were of the opinion that better prices will soon begin to appear as there seems to be a strong demand for good beef-breeding stock throughout the state. The main trouble is that just now it is difficult for prospective buyers to command the money necessary to stock up with the kind of blood many desire to add to their herds. There appears to be a strong tendency toward securing better stock not only among the farmers, but also among the breeders themselves. This, no doubt, is directly traceable to lower prices for breeding stock; hence, from the standpoint of building up better herds, present relative low values will ultimately prove of value to the beef cattle industry.

DAIRY CATTLE.

The dairy cattle show this year fell short of previous years in the number shown. Jerseys led in numbers, with Holsteins second. Only one Ayrshire was entered. Of the 25 head of Guernseys exhibited, 18 were shown by Dairyland Farms of Storm Lake. Holstein breeders from within the state did not hold their own in number of entries. Only about one-half of the total exhibits were from Iowa herds. Iowa Jersey breeders got into the competition much stronger and succeeded in annexing a majority of the premiums. The Jersey show was easily the highest quality exhibit among the dairy breeds and the most closely contested. Practically all of the classes were well filled. The Brown Swiss and Milking Shorthorn shows were largely confined to a few exhibitors, there being only two entrants in the Brown Swiss and three of the Milking Shorthorn division.

SWINE.

Iowa being the greatest hog producing state in the world has the greatest hog show in the world. The showing at the state fair not only is great in point of numbers, but in quality and in enthusiasm of breeders. This year was no exception, although there were not nearly so many animals on the grounds as a year ago. It costs more in freight to get hogs about the country this year and many breeders who ordinarily make the fair remained at home.

Not all the hogs on exhibition were led into the show ring to be judged, however. Ordinarily the state fair is a good place to make sales and much stuff is brought there for that purpose. Buying was much less lively than usual, although hog breeders feel they are sharing better than many other classes of farmers. This year the sellers were more on the lookout for buyers than prospects were for the stuff to buy.

The boys' and girls' pig club stuff constituted no small part of the total hogs shown. These pigs for the most part had been well fitted and there were more than 400 of them. They not only were exhibited in the club show, but were led into the ring in the open classes and many of them found places well to the top.

HORSES.

Iowa has one of the best horse shows to be seen at any state fair. This is because its entries come almost exclusively from Iowa and Illinois, which are the two foremost horse-breeding states of the Union. A few years ago much more foreign-bred stock was to be seen than could be found this year. Horse breeders of this country have demonstrated that they can breed as good or better stock than they can import and they proved the fact at this year's fair. Among all breeds the quality was outstanding and all the more credit is due the exhibitors because they raised most of it rather than having imported it from European breeders. There always will be a place on the grain belt farm for the draft horse. Without doubt the coming of the tractor has cut into the horse business in general, but mechanical power never will make horse breeding an unprofitable enterprise. Horse breeders who have investigated the situation pretty thoroughly are of the opinion that the present number of breeding mares and stallions is too small for the country's needs and that consequently there will be good money in the horse business during the next few years. The lighter showing made at the fair this year undoubtedly is due to the higher transportation charges and general business depression than because of tractor competition.

POULTRY AT STATE FAIR.

The poultry classes this year were among the largest in history, the entry list totaling 2,110 birds and the list of exhibitors numbering more than 1,800 people. Of this number, there were something like 900 exhibitors in the junior classes, or boys' and girls' poultry clubs.

The feature of the show was the quality of stock shown by the boys and girls. It was of such high caliber and so uniform throughout that, from a fancier's standpoint, it is safe to say that the youngsters had the best show of the two staged in conjunction in the poultry building. The improvement in quality shown this year as compared with last is so great that it speaks volumes for the club work. It is making real poultry breeders of the boys and girls engaged in the work.

FARM BUREAU AT THE FAIR.

Monday, August 29th, Farm Bureau Day at the Iowa State Fair, was a red letter day to thousands of Iowa farmers who came to Des Moines to listen to farm bureau gospel and to talk over the times with their fellow-farmers of the state. In some respects, it was a great success, while in others it was disappointing. All admitted that great progress had been made from the day three or four years ago when only five or six tents were to be found in the farm bureau camp on the hill, to the present when the section was crowded, but there was some disappointment evident because of the small attendance this year. But that was characterized as but a reflection of the present condition of the farmer.

The program was ample and occupied the entire day, beginning shortly after 9 o'clock in the morning at the big assembly tent below the poultry building. It was largely inspirational in character, backed up in degree by an undercurrent of determination to stand fast and hold together during this period of crisis for the farm bureau movement.

C. W. Hunt, president of the Iowa State Farm Bureau Federation, was the opening speaker. He recounted the deplorable condition of agriculture today in a few terse comments. Agriculture he characterized as the basic industry of all in our economic life. "If it fails," he said, "all will fail." And the crowd agreed with that cryptic remark.

"It will fail," the speaker warned, "unless we get better remuneration for the products we raise than we get today. We have reached the peak of land values now; the time is gone when we can afford to sell our products for less than the cost of production. The price level of products must be raised, if we are to pay our debts; it must go above the pre-war level—I am not prepared to say how much—but it is away below that level today."

He then turned his attention to the farm bureau movement and the chance of the movement solving the economic tangle now confronting the farmer. "The time has come in this critical period for the farm bureau when we have got to fight, and when we win, as we will, the other interests who are now opposing us will find that we are not hurting them. The danger of the present—the real danger—is from poison 'on the inside. And let me tell you now that if we fail—if this farm bureau movement goes down—we will make a race of peasants!'"

Mr. Hunt outlined what he considered to be the chief accomplishments of the Iowa federation to date—its own justification for its existence, as being: (1) The accumulation of statistics on the cost of production on Iowa farms, and he mentioned several instances where these statistics had been used effectively by the farm bureau; (2) the fact that the federation had stopped the move by Federal Reserve Bank officials to force liquidation of farm debts a year ago. "If that program had gone through," he said, "75 per cent of the Iowa farmers would be bankrupt today and 90 per cent of the banks would have closed their doors"; (3) legislative accomplishments, in the way of 18 bills passed out of 23 introduced in Iowa legislature.

Mrs. Richardson, of Pella, Ia., followed Mr. Hunt as representative of Iowa farm bureau women. Mrs. Richardson made probably the most effective speech of the day. She held the crowd in a blistering heat

for more than an hour. Her talk was crammed full of good sense and happy witticisms. So good was the impression she made that President Howard, of the American federation, invited her to speak at the annual convention at Atlanta, Ga., in November.

"Some of you may wonder," she said, in opening, "why I, an ordinary farm woman, should be on the program to talk to you today. I only want to say that I am one of those women who always have something to say!" She clinched this with an Irvin Cobb story which originated at Oskaloosa, in her home county last winter. The famous humorist had just concluded a lecture there when a lady rushed up to him and said: "Pardon me, Mr. Cobb, but is it true that you men prefer the talkative woman to—ah—the other kind?" Cobb rubbed his chin reflectively a moment and drawled: "Ah—which other kind?"

Mrs. Richardson sketched the part woman has always played in the farm movement from the day the prairie schooner set out into the Great West in the uncertain search for a home and a hearth; from the time little graves were made by the side of the trail in the unknown land, and on grimly towards the setting sun until the goal had been reached; then came the establishment of the farm in the wilderness, the building of homes and their development—with the woman standing by the side of the man and playing her full part, doing her full share. "And she has continued to play her full part down to this very hour," Mrs. Richardson added, pointing out the part farm women had in winning the war.

John W. Coverdale, secretary of the American Farm Bureau Federation, opened the afternoon session. He dealt largely with the problems confronting the farm bureau as a whole, setting out the fact that all depended upon the measure in which the township organization was kept alive and functioning.

He thought four things were necessary to restore the farmer's buying power, and stated that they were the chief concern at the present time of the American federation: (1) Marketing, (2) finance, (3) information, and (4) legislation. "The farm bureau should not go into the mercantile business," he said, "for the purpose of putting anyone out of business. The farmer must commercialize his products so that they can be sold."

J. R. Howard, president of the American Farm Bureau Federation, was also present and made the main address of the day. Mr. Howard also touched upon the economic condition of American agriculture and the mission of the farm bureau. "Mistakes have been made by the farm bureau," he said, "I am frank to admit, but they have been mistakes of the head rather than of the heart."

He condemned the deflation program inaugurated a year ago as having been shortsighted and ruinous. "The European banker outwitted the American banker in not deflating their currency," he said. "As a result, the European peoples are paying off their debts in the very same money that they contracted them in, while we are paying our debts in a deflated dollar."

The transportation question he characterized as one of the "big" questions confronting the farmer. "When we have a surplus we must

immediately go into the transportation business," he said. The railroad situation he considered offered slight chance of relief to the farmer in the immediate future. He flayed the guaranty proviso in the Cummins-Esch bill and called it "the rankest piece of class legislation I ever had anything to do with."

Immediate relief is not in sight, according to Mr. Howard. "We are not going to get immediate relief. The cards are stacked against us, I am sorry to say."

The Great Lakes waterway project he considers the solution for the transportation difficulties of the corn belt farmer. The project of bringing ocean-going vessels to Chicago and other Great Lakes ports and the draining of the Mississippi river can be accomplished for one-fifth the amount of money appropriated for war purposes the past year, he stated. And it will save 10 cents per bushel on freight costs on wheat alone.

Congressman Dowell, author of the federal road bill which recently became a law, and Congressman Dickinson, chairman of the house agricultural bloc, both Iowa congressmen, were called upon for a few remarks. They flattered the farmers of Iowa on the power of the farm bureau in the legislative halls.

Secretary E. H. Cunningham, of the Iowa federation, concluded the program.

UNDER THE ROOF OF THE WOMEN'S BUILDING AT THE STATE FAIR.

Beginning at 9 o'clock every morning and lasting until 5 o'clock in the afternoon with a short noon recess the women visitors at the state fair were given the greatest program ever presented under the roof of the women's and children's building. If the auditorium had been twice as large as it is, there is no doubt it would have been packed at every demonstration. Iowa women know that their part of the fair is as fine as any department on the grounds, and they go to learn and to be entertained. A visitor from Minnesota was heard to remark that such crowds of eager listeners could not be gotten together for the women's program at their state fair. Of all that is good, Iowa affords the best, and the women of Iowa who come to the fair come to take home with them everything they can for the betterment of their homes and communities.

You recall that a few years ago much of the women's program was concerned with cooking and preparation of foods, and those of us who saw and listened also demanded to taste. We demanded the proof of the pudding. This year's program had very little to do with cooking, but instead of lectures which the listeners could only remember in part, the ideas were presented by actual demonstration. What we see is often longer remembered than what we hear.

Miss Margaret Baker, of the extension department of Iowa State College, had a group of rural school children who were camping on the ground. Each morning at 9 she conducted a class in nutrition before the audience, just as she would do in a school. The children were weighed and measured, and given the proper instruction to meet their

condition. If one is not actually sick, it does not follow that he is physically fit. "Health should be preached," says Miss Baker, "as a sacred right and a patriotic duty." Among other things Miss Baker stresses starting the day with a good breakfast, fresh air, sunshine, play and exercise, some rest during every day, no overwork, plenty of sleep, certain foods and good fitting and suitable clothes. All these things she taught her class of children in just as entertaining a way as any class in school should be.

The class in nutrition was properly followed by the Milk Fairy pageant. This drives home the necessity of milk in the diet as no amount of lectures could do, and gives the children the opportunity of taking part in a delightful pageant. Johnny, who is an undersized, irritable child, tells the doctor how he hates milk and simply will not drink it. After Johnny is asleep, the milk fairy appears, and with her a troop of lovely fairies representing the various elements of milk. The fairies are dressed in filmy frocks of all the rainbow colors. They dance for Johnny and sing him songs, telling of the virtue of each element they represent. In the corner of the stage is a huge milk bottle draped with our country's colors. The result is that Johnny awakes to tell his mother of his wonderful dream and his resolve to do the doctor's bidding and drink lots of milk.

The presentation of this pageant at the fair is a story in itself. The state fair board paid Miss Samuels for training the children who were gathered from the playgrounds of Des Moines. Miss McKee helped to select and teach the dances of the fairies. The state dairy council bought the material for the costumes. Mothers from Highland Park and other women who were interested made the costumes. The dairy companies of Des Moines sent cars to the playgrounds for the children and returned them after the pageant. The extension department of Iowa State College provided Miss Imlay and Miss Storm, who directed the staging and presentation. It is a splendid story of what cooperation will accomplish.

A playlet, the High School Clothes Line, carried the audience to the question of suitable and becoming clothes for the girls of what is called the "flapper age." Five girls meet at the home of one of them quite by accident one day. They fall to discussing clothes, criticizing their own and those of their school mates. As a certain article of clothing is mentioned a model appears on the stage showing it. In this way both the suitable and unsuitable garments from shoes up to hats are actually seen. Also, the modes of hair dress. The girls do not need to say much about them for in this case seeing is most certainly believing.

Here, too, no description would be complete without the story of the origin of the play. The farm bureau women of Woodbury county had taken the subject of clothing for their year's project. At the end of the year they planned to put on some "stunt" which would show what they had been doing. So they wrote what was the beginning of this playlet, "The High School Clothes Line." Since then it has been added to and changed till now it is a play which any community large or small can

give with profit to all. The play was in charge of Miss Dodson and Miss Anders, of Iowa State College.

At 1 o'clock each afternoon Mr. Clifford Bloom, of Drake University, led the audience in community singing. Only a few years ago this delightful means of getting together was unknown, and any attempt to get people to sing in large audiences would have fallen flat. Now it is a rare gathering which does not start off with a good sing. Mr. Bloom says every Iowan should know all the words of America, The Star Spangled Banner, and Iowa.

After the sing Miss Leiby, of the extension department, gave one of the most helpful features of the women's program, choosing a Becoming Hat. Women representing the various types of figure, face and hair dress, served as models. Many praised it as the most instructive part of the program, for in general women know less about hats and how to wear them than any articles of clothing.

Then followed a demonstration of good posture, and its effect on health. Such simple things as the way we breathe, walk and stand were made decidedly important. It is not vanity to desire a good figure and a graceful carriage—it all counts in the big thing, health. Hollow chests, stooped shoulders, protruding abdomens, are all results of over-using some sets of muscles and failing to use others. So even the housewife who has work a-plenty to do, should watch herself to see that she keeps all her muscles in good condition. Stopping two or three times a day to take several deep slow breaths will keep the chest muscles from disuse.

The latter part of the day was given over to conferences and features which were more purely entertaining, plays and pageants, with a change in this part of the program each day. Then, of course, there were exhibits which were open all the day and one could drop in at any time. The child welfare exhibit, under the direction of the parent-teachers association. The art exhibit, which contained paintings and drawings by our own Iowa artists, as well as a fine exhibit of art from St. Louis. The library commission had a room where one could get information on libraries and the state traveling library in particular. Many farm women realized for the first time that no community in our state is too remote to get the benefit of Iowa's State Traveling Library for their schools or clubs. Mrs. Voldenberg was on hand to show women many kinds and styles of sensible shoes. At certain hours a free examination of feet was possible with expert advice as to causes and relief of trouble. There was the pleasant nursery and playgrounds where mothers could "park" their babies and little folks while they wandered about the exhibits unhampered. Incidentally the kiddies were much happier and more comfortable.

Then, last but not least, in either importance or entertainment, was the baby-judging room. And it was a rural baby this year who carried off the sweepstakes ribbon for boys.

CHEERING UP THE DARK ROOM.

We have no desire to call up unpleasant subjects, but housecleaning is on the bill of fare for most of us before many more moons. Fortunately, fall housecleaning is no such woman-killing process as in the spring when stoves must be gotten down and the soot and smoke of winter tussled with.

Fall housecleaning is more likely to be rearranging the rooms for winter comfort and brightening them for winter cheer. Have you a dark, cheerless room in your house that you do not enjoy sitting in long in wintertime? Or a room which seems in some indefinite way to need brightening? What can be done to make it attractive?

If you can afford a little carpenter work, the first thing to think of is the windows. Can the single window be cut into a double one or a wider size so as to let in twice the light? Or if the wall space is needed for necessary furniture, two small windows over a mantel or bookcase will perhaps let light into an otherwise hopeless corner. If there is an outside door of solid wood, will having the upper part of glass mean more sunshine at times of the day?

But if carpenter work is out of the question, plan to make the most of what window space you have. The draperies in the naturally dark room should never completely cover the window. The curtains should be very sheer and drawn back with straps to the sides of the window or else just side draperies of brilliant colors may be used, in either case leaving the center of the window free for light. The tendency is more and more to leave part of the windows uncovered in all rooms. We are not half so afraid of someone seeing in as we are of not getting enough of nature's sterilizer, sunlight.

Just so simple a thing as a screen may keep out lots of light on a dull winter day, so off with the screens as soon as possible after frost.

Turning from the windows to the walls, a wall finish or paper of yellow is the thing for a dull room. In fact, it is a mistake to use yellow in a room where the sunlight comes for any length of time, for yellow is too near the color of sunshine and is hard on the eyes.

Repainting the woodwork to a cream color will work wonders in the dark room. Or abandoning a heavy, dark carpet for painted or varnished floors may turn the trick. It is quite likely that the dark room should not have the floor covered with a large rug, but with two or three small rugs of rather bright colors.

But supposing the room must be brightened without any of these changes, what can be done? Well, we must look to the little things. Take down every dark or heavily framed picture and substitute colored pictures, even if they are not such good ones. Gilt frames help in such a room. Try putting a mirror in this room if it is a living or dining room. It is peculiar what a brightening effect a mirror will have. In a room like this the very little details count for much; a white scarf on the table, bright candles, two or three colored cushions, or a bowl of the most gorgeous blossoms available. Plants will not thrive long in a sunless room, but on occasions of company, a geranium resting on the window sill seems to radiate cheerfulness.

Then if we look to the outside that no trees nor shrubbery obstruct the light, we can have every room a room that sings.

FRESHENING UP HAT TRIMMINGS.

Second to knowing what you want to do and how to do it in retrimming a hat, is having the old materials clean and fresh. If a milliner does the cleaning she will charge a good round price, but almost any of the ordinary trimmings can be freshened up at home.

For feathers, make a good suds of naptha soap and lukewarm soft water. Let the feathers lie in this about 15 minutes, occasionally drawing them gently through the hand if the soiled places do not come out of themselves. Rinse thoroughly in lukewarm water, putting a very little bluing in the last water. If you can take the time it will pay to dry the feathers by shaking near a stove where the air is warm but not hot. Otherwise, hang them by the stem and shake occasionally.

Only partially curled feathers are used much, and this desired state can be secured by using the blunt end of a knife, taking only a few fronds at a time and drawing them between the edge of the knife and the thumb. A slight curl often may be secured also by holding the dry feather close to some burning salt sprinkled over a stove. If the feathers were white or some pale color, they may be dyed at home. Secure a tube of oil paint the desired color and dissolve in gasoline, testing to get the right shade. The same method may be used to restore color in faded feathers. This is also a very good way of dyeing ribbon, since the gasoline and oil paint will not make the ribbon stiff as water dyes do.

Silk ribbons for hat trimmings should be cleaned in gasoline if possible. If soap and water are used, the ribbon will be left either stiff or without any life at all, depending on how much real silk and how much filler is in the fiber of the ribbon. As a matter of fact, our ribbons these days are very little silk. Do not use a hot iron in pressing. If the ribbon is narrow it can be dried by wrapping around a bottle and then usually it needs no pressing.

Velvets may be greatly freshened by cleaning with gasoline or some good commercial cleaner, using a soft cloth which is free from lint to do the rubbing. Do not rub hard enough to flatten the nap. When dry and free from the odor of the cleaner, steam well and where the places are badly worn brush softly. Never attempt to press velvet, but stand a moderately hot iron on end and draw the velvet over it, the wrong side touching the iron.

Flowers are the hardest trimming material to freshen. There is no successful way to restore cotton ones. Silk and velvet ones may be brightened up a bit by using the oil paint and gasoline treatment mentioned above. This must be done by using a soft paint brush. But always remember that a limp or faded flower can spoil one's whole attempt to make over a hat.

FROM WALLACES' FARMER, DES MOINES, IOWA.

Corn may be selling at 38 cents, and oats may bring only 23 cents a bushel, but hogs and cattle are still keeping agricultural Iowa in the lead of farming states. This was the outstanding impression given by the Iowa State Fair of 1921.

Iowa breeders brought in carloads of the sort of stuff that turns feed into profits. Iowa farmers came in thousands to look the stock over and to take back home with them a determination to grade up their herds to a higher level. The exhibits of live stock in some cases were smaller than in previous years, but this was due largely to the absence of breeders from outside the state, whom the high freight rates discouraged. Iowa breeders, however, were there in full force, and with a show of quality high enough to welcome comparison with any previous state fair.

After the hard year farmers have just passed through, there was some doubt as to the support which the fair would receive. The fair board spent a good deal of effort in encouraging the farmers to attend. The joke was on the fair board. The farmers came in numbers as great as usual. The drop in attendance was due in great part to the absence of the casual one-day visitors from Des Moines and the neighboring towns.

Some of the farmers who attended this year may not come back next season, however, unless the board recognizes that the war is over and trims prices to pre-war standards. Comment among farmers on the 75 cents admission and the 75 cents and \$1 admission to the amphitheater was general and decidedly unfavorable.

The absence of city visitors cut down receipts a great deal, but it added to the comfort of the fair. The crowds were not so great; it was easier to see the exhibits, and there were only a few of the patent leather shod observers whose principal comment on the swine show is on the odor. The lady who last year identified a black cow to her friend in the immortal phrase, "They call this one a Shorthorn because it hasn't any," stayed away this fair week.

The men and women who walked through the live stock barns this year were mostly people who already knew a good deal about stock and who were anxious to learn more. They found testimony to the value of good breeding in every stall. The lesson was driven home just a bit more forcibly, however, in the pure-bred sire exhibit.

There was Lord Gainford, a pure-bred Shorthorn bull. Alongside was Old Timer, a very ordinary looking old red cow. And beyond them were two calves of that combined breeding. Lord Gainford had his mark on them. Roan Bob, one of the pair, won a handful of ribbons last year.

The dairy pure-bred sire exhibit was even more impressive. Two cows, both very ordinary grades, each with a butter-fat record of around 300 pounds, were standing side by side. To the right of the first cow was her daughter, by a scrub bull, with a butter-fat production of 185 pounds. To the left of the second cow was her daughter, by a pure-bred dairy bull. Her record was 420 pounds.

There were a good many who took their pencils out and did a little figuring right there. The answer they worked out gave a clearer idea than many had had before of the actual cash value that a good sire adds to a herd.

Perhaps the most hopeful feature of the whole fair was the amount of quality stock exhibited by the Iowa boys and girls. One of the dramatic moments in the fair came on the evening of Tuesday, at the Horse Show, when 145 boys and girls led as many baby beeves into the arena.

To the farmers in the audience, this was a sight that bettered beyond all measure the fireworks display that was going on over in front of the grandstand. That exhibition of baby beeves proved that Iowa was raising another generation of live stock men and women who would keep the state at the head of the procession for many years to come.

Although the live stock was the big feature of the fair, it was only one part of a very well balanced exhibition. The agricultural exhibits were unusually good. Twenty-two counties competed in the county exhibits, as against seventeen last year. The competition was more severe, and the exhibits of a higher order than in any previous year. Polk county repeated its victory of last year by scoring higher than any other county. In the state at large, Polk was first, with Guthrie, Pottawattamie, Carroll, Cass, Decatur, Poweshiek, Mills and Story following in that order.

Iowa State College had an unusually fine exhibit. Demonstrations and exhibits of a practical nature made this section under the amphitheater one of the prize places for those visitors who came to get the most educational value possible out of the fair. The community theater, whose workings were shown by Ames students, was also a big drawing card.

Up in the agricultural building, there was one corner of the hall that always drew a crowd. This was the wool exhibit. A tin can full of shoddy was shown beside a bolt of cloth from virgin wool. The sign above asked, "Which do you wear?"

Methods of tying up a fleece, the different grades of wool, and the different stages in the process of manufacture were shown. Blankets of the sort that sheepmen are having made out of their surplus wool were also on exhibition and proved to the crowd by their excellence the importance of getting real wool into manufactured fabrics. Mr. and Mrs. Volt, of Tama county, assisted by Miss Mary Hootman, of Van Buren county, gave a demonstration of the old fashioned method of manufacture of wool cloth through every stage of carding, spinning and weaving.

Manufacturers of farm machinery and equipment of all sorts were on the grounds in full force. The many farmers, who realize that inefficient labor is the most expensive thing on the farm, took in this feature of the fair very thoroughly.

"Hired men are the biggest source of trouble and expense on the farm," said one farmer to a friend, as he looked over one exhibit. "I can produce cheaper if I fix things so that the boys and I can run the place without hired help. Buying a machine that will let each of us

do 25 or 50 per cent more work will be a lot better for profits and for the farm generally than if we spent the money hiring extra men."

In general, this Iowa State Fair can fairly be said to have rendered a more real service to the state than any fair in recent years. It showed visitors and business men that the Iowa farmer has not been daunted by hard conditions, but that he is coming back with all the old drive and force to make his live stock show him the way out of the depression. It gave the Iowa farmer himself a new realization of his own strength. For thousands of farm families it made an inspirational vacation, a beneficial change from the routine of farm work. It is safe to say that many farmers who attended the fair have gone back home with new hopes, new determination and new ideas that will be transmuted into a revival of agricultural prosperity.

THE BEEF CATTLE SHOW.

Breeders of cattle turned out in force and brought their best productions to the 1921 Iowa State Fair. Despite the radical readjustment which has taken place in the pure-bred business during the past twelve months, the numbers of beef cattle exceeded the big show of 1920. Shorthorns on the ground numbered 273, compared with 203 last year. A total of 216 Herefords appeared, as against 202 in 1920. The Angus show increased from 104 to 115. Altogether, the beef cattle interests of Iowa may well be proud of the manner in which their breeders supported the show this year. The show was featured by a goodly number of new breeders. A general tendency toward showing fewer highly-fitted cattle was noted. The extreme heat of the summer and of the past two or three weeks of the show season had left its marks upon the cattle, and many of them lacked the bloom that they would have shown under more favorable conditions. A very gratifying show of Red Polls was out, and also a large exhibit of Polled Shorthorns.

THE DAIRY CATTLE SHOW.

From the standpoint of numbers the dairy cattle show was disappointing, the count of animals in this division showing the most marked reduction of any of the live stock departments. Some of the strong herds customarily seen at the Iowa fair were absent from this year's show. A situation which lent encouragement, however, was the presence in the competition of new breeders and new herds. For the most part the cattle shown reflected great credit upon their showmen and despite its limited numbers the show proved a source of gratification to the dairy interests of the state.

HORSES.

The draft horse show at the Iowa fair was excellent in regard to the individuality of the animals shown, but hardly as large as some of the

previous shows. The best classes, so far as size and uniformity were concerned, were the futurity classes and two-year-old filly classes. Inquiries at a good many of the breeders' stables showed that people are beginning to take a larger interest in horses. Several exhibitors stated that they had more inquiries at the fair this year than at the past two seasons combined. It seems that a reasonably good trade can be expected as conditions improve. The show of draft teams was strong, with J. C. Ritchie winning on a team in a field of seven. The light horse show was very attractive, and larger than last year. The night shows were very attractive also, and good competition was furnished in all classes.

THE HOG SHOW.

Absolute faith in the hog business could not have been better attested to than by the huge exhibit of pure-bred animals of every breed, which were collected under the mammoth swine pavilion on the Iowa State Fair grounds last week. It was to be expected that numbers would slump some from the banner year of 1920. However, the same high standards of quality for which the Iowa show is noted prevailed among the swine exhibits last week. Interest in the show was keen, particularly in the younger classes, which resulted in bringing out large exhibits of well-fitted pigs.

THE SHEEP SHOW.

The show of sheep was a decided credit to the state of Iowa. Numbers held up very well in comparison with last year, and the individuals shown were creditable representatives of their breeds. A new standard for wool shows was set at the fleece wool show promoted by the Iowa Fleece Wool Growers' Association. Much interest was manifested in it.

A woman gave the keynote of Farm Bureau Day at the Iowa State Fair. Mrs. H. R. Richardson, of Pella, stated: "We are now in the middle of the journey. An organization is always enthusiastic when it starts and in the end it usually has a lot of pep—but when we are in the middle of the journey, or road, as at the present time, things are sometimes slow, dry and monotonous.

"We must make a stand at the present time and let the people know whether we are for the Farm Bureau or against it. The woman's part is just as important as the man's. The man who deprives his wife of the privilege of standing by his side in this hour of depression is depriving her of the work which she should be doing. The Farm Bureau must champion the women standing side by side with the men."

President C. W. Hunt, in his opening remarks, urged a return to a higher price level when he said: "Agriculture will fail unless we get better remuneration than we are getting today. We can not pay our national debts at the present price level. Finances must be arranged so that the farmer's price will increase so that we can meet other fellows' prices on a higher level. We are not going to be satisfied to continue to sell our products at less than cost of production."

Mr. Hunt emphasized the fact that the biggest danger of the Farm Bureau at the present time is not outside opposition, but the danger from inside of the organization. He named four principal accomplishments of the Farm Bureau: First, the securing of figures and statistics on the cost of production; second, the saving of the state from bankruptcy by showing to the financial authorities that it was impossible and impractical to force liquidation during the past year; third, the legislative work in which the Farm Bureau secured the passage of eighteen bills out of a total of twenty-three which they prepared; fourth, the recent work on the equalization of taxes. The tax hearing was the first time that the farmers have been represented in any organized way, and the result was an increase in the taxes of public utilities, while farm values were left at the 1919 figure.

Farm Bureau songs, a large number of which were the result of the recent Wallaces' Farmer contest, helped to keep the crowd in an enthusiastic mood. Professor Tolbert MacRae, of Ames, who was one of the judges in the song contest, led in the community singing. The song called "The Optimist," which is sung to the tune of "Turkey in the Straw," was undoubtedly the favorite with the audience.

There are now 1,122,000 families in the American Farm Bureau Federation, representing forty-seven out of the forty-eight states, according to the figures that were presented by J. W. Coverdale, secretary, in his brief talk before the meeting. He emphasized four points as the principal work of the American Farm Bureau Federation. Marketing was the point most emphasized, in which the American Federation has been responsible for the appointment of special committees along grain, live stock, dairy, fruit and cotton lines, for the working out of commodity marketing organizations. Along finance lines, the Federation has also been doing considerable study. Through their research bureau, they have been endeavoring to furnish intelligent information, and, lastly, their legislative work at Washington has been responsible for the representation of farmers' interests.

"The thing that has been hurting all of us is that we did not have a world peace one and one-half years ago," is the remark of J. R. Howard, president of the American Farm Bureau Federation, at the close of his talk. He further stated that he feels that President Harding has the biggest opportunity in the coming peace conference of any president since Abraham Lincoln.

In speaking of legislation, Mr. Howard gave special credit to the agricultural bloc in both the senate and the house of representatives. The recent legislation which the Farm Bureau has been especially behind, has been the packer bill, the grain exchange bill, and the farm finance bill.

The transportation question was also discussed by Mr. Howard. He answered the criticisms that have been made relative to railroad legislation by stating that his instructions at the time the Cummins-Esch bill was passed were to work for the best bill that was possible, that would do away with government ownership. He stated that he opposed at that time a guaranteed return, and that at the present, in addition to opposing that feature of the bill, he also opposes the compul-

sory arbitration clause. The reason he gave for opposing compulsory arbitration was that there is no connection between the board that decides the revenues the railroads are to receive and the expenditures to be made for labor.

October 12 has again been set as the date for the annual membership drive. District meetings will be held in each of the eleven congressional districts, at which a worker from each township is requested to be present, as well as the Farm Bureau officials and others, so that everyone who goes out in the drive will be able to thoroughly explain the work. At the board meeting which was held, Mr. A. L. Middleton, of the U. S. Grain Growers, Inc., explained the status of their organization at the present time, and from his statement, it seems likely that the work of the organization in Iowa will start within the next month or six weeks. He stated that the Grain Growers has practically received the O. K. of the secretary of state, but as yet the finance corporation of the Grain Growers is not in shape to meet the approval of Iowa regulations. It is likely that the Grain Growers will hold a school of instruction some time during the month.

WOMEN AT THE IOWA STATE FAIR

After spending several days at the Iowa State Fair, we came home with the conviction that in order to get anything out of the fair, one must have some real interest in the problems that are being analyzed. The very day we spent six hours in the women and children's building and went home marveling at what is being done in the way of grouping together the interests pertaining to child welfare and the home, we heard a woman who had spent half an hour there cautioning a friend: "Don't go to the women and children's building; all you hear there is the crying of children, and all you see is a hot mob of women and children straining their ears to hear what is being said on the stage."

For those who did not get to the fair, we will briefly outline the points that interested us:

Beginning at the top floor, in the home economics department, it was a very interesting bit of hallway. From the posters on the stairway with their informative verses to the table where milk soups were being served daily—squash, spinach, carrot and other milk soups that are different.

Then the rats—usually not special subjects of interest, but these two stuffed rats were there to demonstrate the value of milk in the ration. One rat had received milk in his ration, the other had not, and the milk-fed rat was three times the size of the other.

There were photographs also of rats, with the explanation: "These two rats were the same age and size and were started on a test, the diet of each being the same except for protein. Protein was supplied to No. 1 from wheat flour only, resulting in a slow growth. To No. 2 protein was supplied two parts from wheat flour and one part from milk. The rat made a normal growth. In both cases the percentage of protein and the nutritive value of the two rations were the same. Milk protein made the difference.

Another exhibit showed pictures of the same rat taken twelve days apart. The first picture showed the rat as it looked after it had been fed for thirty days on a diet suitable in every respect except that it was free from water soluble vitamins—a substance found in milk and succulent fruits and vegetables. The rat became so weak it could hardly stand, and would have died in a few hours. Its weight declined from 3.2 to 1.7 ounces. The second picture showed the same rat twelve days later after vitamins had been fed, with health and vigor restored and a weight of 2.9 ounces.

To further drive in the value of milk, a poster with the attractive picture bore the following verse:

"I know a small girl, and what do you think!
Coffee and tea were her usual drink;
But when in the plan she used milk in her diet,
Her health was improved and her nerves were more quiet."

All through the week the home economics program went on with educational addresses, demonstrations and bulletins upstairs. Downstairs bables were being scored, and hat demonstrations and style shows were drawing crowds. The "Milk Fairy Pageant" in the morning; the "High School Clothes Line" and the pageant, "The Legend of the Wild Rose," in the afternoon. (By the way, the directions for the Milk Fairy Pageant and the High School Clothes Line may be had from the Extension Department, at Ames, on request.)

The Health Clown, in the Red Cross room, made quite a hit with the children. Dressed in white dotted with carrots, beets, radishes, etc., and with a whitewashed face artistically caricatured with red, the clown stood on the platform with scales and measures, a trained nurse, and a secretary who handed out red crosses with directions for health on the reverse side. The children were weighed and measured by the nurse, a card sent to the secretary, who made out their crosses and handed them to the clown to pin on them. Bobby was sent to the nurse with the word that he was six pounds underweight. Sorrowfully, she gave him a card and introduced him to the clown: "Roco, this is Bobby. Bobby is six pounds underweight." Roco's face fell. "No!" he cried; "not six pounds underweight, Bobby!" Bobby appeared to sense the misfortune and hung his head. Then Roco pulled him over to his knee: "Let me tell you, Bobby; you must drink milk! Don't like milk! Well, you try sprinkling a little cinnamon over it and you'll like it. You want to get muscle, Bobby. Feel my muscle," etc. The psychology of the health clown was that children do not care whether they are healthy or not, but they want to be big and strong, and his low-spoken talks to each individual child seemed most effective.

The Little Theater drew a big crowd each day. The play, "The Neighbors," took especially well.

The wool growers' exhibit in agricultural hall was a revelation to many. The only difficulty seemed to be that no one could buy the exhibits. We wanted to tuck a lovely brown checked single blanket under our own arm and go off with it for a couch cover, taking with it enough of the warm wool socks to hang for every child and grandchild at Christmas time. It was rather surprising to see how many women and some men seemed to know something of carding and spinning.

Men may think that women's interests lie in cooking, but there was a smaller crowd of women about the pantry stores than about the educational exhibits. It was the work of the boys and girls that drew the attention of women to the canning and baking, rather than the efforts of other women. In the boys' and girls' club building, the garment, cake making and poultry demonstrations drew good crowds.

To us, this state fair held more of educational value than most, and the farm women who went with the purpose of learning all that could be learned in a short time, got much more out of it than they expected.

FARMER AND BREEDER, SIOUX CITY, IOWA.

The state fair is one of the most notable institutions in Iowa. It lasts but ten days, but in that short space of time it features the state as no other institution does. It represents in the aggregation of products and processes, the essential "agriculturalness" of this great commonwealth that lies in the center of the corn belt. This rural quality is not seen merely in Iowa's grain, fruits and vegetables, and in its splendid showing of high-class farm animals, but is manifested also in its industries, its public institutions, its educational system, its fine arts, its amusements, its people and its reputation for solidity of substance and sanity of judgment. As Iowa stands for the best in American life—with agriculture as the root and sustaining source of the wealth and progress of the nation—so does the Iowa State Fair stand at the head of all such expositions—registering as it does, the present status and yearly progress of its farming people and the towns and cities dependent on the soil.

The fair itself is at least 67 years old, having been held for a number of years in various cities in the eastern part of the state, but finally settling on its present site in the fall of 1886. There it has grown and prospered year after year. There have been ups and downs of attendance and financial balances, but in the main the tendency has been onward and upward. The fair has come to stay for all the time that agriculture itself shall endure, and there is little doubt that it will continue to expand and increase its usefulness and its glory.

The fair this year was no less interesting and attractive than in former years, but the attendance was not up to the record-breaking years of 1919 and 1920. Those were years of spending and of going to and fro, and it was natural for great numbers of people to flock to the centers of amusement and recreation as never before. This year is one of retrenchment—not only industrially but in the observation of those small economies on which are based thrift and saving. Many did not go to the state fair this year because they felt that they could not afford it. The general business depression naturally had its effect in lessening the crowds. Des Moines' transportation troubles kept many away. But in spite of all these negative influences, the management were happily disappointed in the paid attendance, which was greater for the ten days' duration of the fair than in other years except those later ones when the war and its after-effects so largely increased the number of visitors. The total attendance was about five-sixths of the record of 1920, which is a very good showing considering all the circumstances.

On Farm Bureau Day over 50,000 were present. President Howard and Secretary Coverdale, of the American Federation, and President Hunt and Secretary Cunningham, of the Iowa State Federation, addressed the large crowds that filled the Farm Bureau tent throughout the entire day.

The weather this year was somewhat below the average in quality but made up in quantity—the first days of the fair being unusually hot and humid, and rain adding some discomfort on “Big Thursday.”

The exhibits at least smashed all records made during the last sixty-seven years. The wonderful array of pure-bred live stock filled the barns and sheds to overflowing, and in quality as well as numbers was unsurpassed by any previous exhibition. The machinery exhibit also was up to standard—manufacturers and distributors doing themselves proud in the face of lessened demand.

There were no transportation difficulties, in spite of the fears of those who wondered how the thousands of visitors added to the thousands of citizens could get anywhere with no street cars running. The street cars ran during the fair and with the shuttle trains on the Rock Island, busses and private conveyances took good care of the crowds to and from the city.

Despite the feeling in some quarters that the pure-bred business had been badly bumped, breeders from all over the Middle West were at Des Moines with the best horses, cattle, hogs, sheep and poultry that have ever been seen at any fair. The cataloged entry list showed a total of 9,178 entries in the above divisions.

The horse division was all that ardent horse lovers could desire, over 1,000 entries revealing a quality not frequently seen at one gathering.

The cattle building was filled with the best exhibition of beef and dairy animals ever exhibited at the state fair, every division being well represented except the Ayrshire, of which breed there was but one animal entered.

The swine exhibit was fully as good if not better than those of previous years, over 2,848 pure-bred animals from all sections calling attention again to the predominance of the prolific and quick-growing hog as the one best bet of farmers and stockmen in Iowa and surrounding states. The hot weather of the early days of the fair caused a good deal of suffering and some losses among the large hogs.

Sheep were well represented, the number of animals increasing each year, which shows the tendency of farmers to raise more wool and mutton in small flocks throughout the corn belt. The quality of the sheep exhibit was about the usual average for past years.

There were more fowls of all kinds and classes registered in the poultry department than ever before—thus recording an increasing interest among country folk and townspeople in the popular and productive hen and her more or less distant relatives. There was something of value and interest for every visitor to the fair in the extent and variety of the poultry and pet stock on exhibition this year.

One of the outstanding features of the 1921 fair was the boys' and girls' pig club exhibit which far exceeded any previous effort—more than 200 exhibitors contesting for honors with 460 animals. This feature of educational work among the young people of the farm can scarcely be over-

estimated. There was not only enthusiasm shown by the young exhibitors, but the quality of many of the entries was sufficient to entitle them to a place in the open classes. Generally speaking, great improvement over previous years was shown in the number and finish of the animals prepared for this contest.

In the Poland China classes, Oliver Burnstedt, Des Moines, carried off first prize. Lester Hanson, Atlantic, won first prize on the Durocs. Arline Brown, Webster City, won first on Chester Whites. Ralph Hibbs, Le Grand, won first on Hampshires. Ralph Berry, Atlantic, won first prize on Spotted Polands. John Porter, Jr., Bouton, won first on Berkshires. In the fat hog classes Virgil Brock, Adel, carried off the first prize.

The boys' and girls' calf club was another exceptional feature of the live stock show, the baby beef and heifer classes being large and well fitted. There were 125 animals entered in the baby beef classes from the Shorthorn, Hereford and Angus breeds. The champion baby beef steer was shown by Vernon Shepard, Muscatine, and the reserve champion was shown by Archie Brown, Nichols. A goodly number of excellent pure-bred dairy calves was shown by enthusiastic boys and girls in competition, the three popular breeds in this section being represented.

A parade of 1,500 boys and girls, all of whom had something of special interest to show or to do, was a conspicuous feature of the day on Wednesday the 31st. This splendid parade attracted attention and cheers from the grown folks all along the route, and revealed the activities of the juvenile organizations in agriculture, industry and home work.

One of the most popular features of the fair is the camping privilege which is taken advantage of by thousands—many of whom take "first choice" several days before the fair is officially open. The grounds devoted to this purpose now embraces 120 acres of beautiful wooded slopes which are always dotted with tents by country people attending the fair for an outing as well as for the educational and amusement features.

Of the entertainment features at the state fair, about all one can say is that they seem to be the best available. There is variety enough to please all tastes, and while some of the midway shows are looked at askance by certain classes of good citizens, they manage to attract many others who are not so particular.

Taken altogether, the fair this year was a success from all standpoints except that of comparative attendance. The great collection of exhibits registering Iowa's progress in agriculture, industry and education, was fully up to standard, for all of which the fair management deserves credit in the face of obstacles and discouragements. There will be no loss this year for the state to make up, Treasurer Morrow, of Afton, stating definitely as follows: "You can tell the public that despite a falling off in attendance this year, for reasons with which everyone is familiar, the fair will show a satisfactory balance on the right side of the ledger."

As to the relative character of the fair itself, no better report can be recorded than the opinion of Mr. E. P. Puffer, General Traffic Manager of the Burlington Road, who stated: "I have seen many state fairs this year and in past years all over the country, but Iowa has this year the greatest fair exhibit I have ever seen. I don't believe such a collection of

live stock has ever been assembled before. It compares favorably upon its merits with the International."

BREEDERS' GAZETTE, CHICAGO, ILL.

"Maintained for the welfare of the people of Iowa" might well be the motto emblazoned over every major feature at the Iowa State Fair, held in Des Moines last week. It was a good year to see the fair. There was plenty of room as well as plenty of time to ask questions; the attendance (275,000) up to Friday was 82,000 short of last year, but the large number of automobiles present indicated that much of the falling off was due to a decrease of urban attendance, making the fair even more of a farmers' gathering than in former years. While it is apparent that the average stockman is feeling the effects of the depression, following the "boom," it is also apparent that he is learning to enjoy his life and environment. At the state farm bureau headquarters the information was given out that more picnics had been held this year in Iowa than in any previous year.

The beef cattle show was excellent; the dairy cattle display was fair; the swine show brought out some outstanding individuals; the sheep department reported not so representative a display as formerly, but a large number of small breeders were listed as exhibitors. The draft horse show was regarded as the best exhibits made in some time by American breeders. The light harness and saddle horse exhibits were better than formerly, and at the night shows the crowds were large and enthusiastic.

One department which has expanded rapidly and for which much space has been provided in the buildings is that of the boys' and girls' club work. Five hundred and seven boys and girls, 460 pigs, 190 calves and "baby" beeves, 30 sheep, 950 head of poultry and \$3,635 in prize money, together with some free trips to Sioux City and the International Live Stock Exposition in Chicago, all scrambled together, made a happy mixture which kept the pot boiling, and gave the fair an aspect of activity that it would have lacked otherwise. The Iowa State College was well represented by departmental exhibits. The "Little Country Theatre," under the auspices of the public speaking department, entertained at three shows daily. The 20 county exhibits and 13 individual farm exhibits held attention in the Agricutural Building, both variety of product and artistic arrangement being apparent in all. Polk county won the blue, while the E. M. Wilson Farm at Guthrie Center won first honors in that division.

One heavy rain the latter part of the week, followed by threatening weather, appreciably cut down the attendance.

The Swine Show

The hog show included 2,848 hog entries, distributed as follows: Poland Chinas, 570, Duroc Jerseys 553, Chester Whites 509, Hampshires 510, Spotted Poland Chinas 163, Tamworths 62, Berkshires 48, Large Yorkshires 28, and pig club pigs 460. Compared with recent years, the Poland Chinas presented the strongest show, the Chester Whites being a close

second. The pig club was incomparably the best ever seen at the Iowa fair. The absence of the Poland China and Duroc Jersey futurity shows was noticeable, these having been previously held at Davenport, Iowa. Breeders reported an active inquiry, and sales were numerous. Prices varied widely. Salesmanship was a greater factor than in recent years. One Duroc Jersey breeder sold seven spring boars for \$700, the lowest going at \$65. A Poland China breeder sold twelve at \$100 to \$250. Chester White and Hampshire breeders had a considerable inquiry and made a number of satisfactory sales, as did also the exhibitors of the bacon breeds.

The Sheep Show

The sheep show was approximately equal in numbers to that of last year, but the exhibits were not quite so good in "fit." Shropshires, Hampshires and Cotswolds were strongest in numbers. Many of the entries were Iowa-bred. An encouraging feature was the large number of entries made by smaller breeders, who are just beginning.

The Sheep-Shearing Contest

This was one of the greatest attractions of the sheep show. For three hours sheepmen vied with one another in their skill with the power machine clippers and shears. Twenty-three sheep were shorn, and blocked and trimmed in the fitting contest. Ordinary field lambs were used. Each shepherd drew for his sheep. One hour was allowed for the blocking and trimming contest. The boys made a remarkable change in the appearance of the lambs. The judges, in placing the awards, took into consideration the kind of sheep to begin with, the way that the shepherd handled his sheep, and the appearance of the sheep when the shearer had finished with it.

CHICAGO DAILY DROVERS JOURNAL, CHICAGO, ILL.

Iowa's state fair live stock judging pavilion has been outgrown, and the first permanent building on the grounds that are the pride of the leading agricultural state of the Union must be enlarged to keep pace with the cattle barn that is this week housing three and a half acres of cattle.

Today these champions and grand champions of previous state fairs are being marshaled for the grand march across the street to the live stock pavilion where the judging events in the beef breed sections are in progress. The draft horse men had the live stock arena to themselves this forenoon, and in a way to convince the onlooker that the horse is still playing a prominent part in the agricultural economics of the country. It was one of the best draft horse shows ever presented at the Iowa State Fair, and this is its 67th anniversary.

Cattle Show "Best and Largest"

The great cattle barn, sheltering here this week the premiers of the beef breeds, and dairy cattle that attract a great deal of attention from people of a state that is nearly as prominent in dairy progress as in the achievements that it can claim for itself in the beef cattle production.

"This is the best and largest beef cattle show we have ever assembled at the Iowa State Fair," Dean C. F. Curtis, of Ames, said Sunday as he surveyed the array of purebreds in the great cattle barn.

One naturally expects to see a great swine show at Des Moines, and one is never disappointed in this expectation.

Record Trip From Springfield

B. H. Heide, general manager of the International and president of the Illinois State Fair board, was an early arrival Sunday, coming on from Springfield, Ill., where he gave the exhibitors invaluable aid in the hegira from Springfield and the Illinois State Fair to Des Moines and the Iowa State Fair.

All records for transporting the live stock moved from Springfield to Des Moines were shattered this season, all of the 42 cars being on the grounds at Des Moines at 10 o'clock Sunday, after having been whirled across the prairies of Illinois and Iowa on an actual running time of 47 miles an hour after the Rock Island Railway took the special train over at Peoria, Ill., Saturday afternoon. General Manager Jones, of the Rock Island, gave his personal attention to the movement of the live stock train after it was turned over to his line at Peoria. It was unloaded at Des Moines in less than two hours after arrival by special switching crews. In this way all the old-time delays between Illinois and Des Moines were obviated and a happy group of exhibitors completed the second lap of the Midwest fair circuit, virtually all of them having gone to Springfield from Sedalia, Mo., and the Missouri State Fair. The success of the circuit routing assures a record-breaking live stock show at Lincoln, Neb., next week and at Topeka, Kan., the week following and at other succeeding state fairs on the Midwest circuit, formed last May in a meeting at Kansas City, Mo.

When the Iowa State Fair reached the group and herd classes in the beef breed sections of the cattle show here ensued such an exhibition of live stock as has never been seen at this, the largest state fair in the corn belt, and noted for its live stock displays.

Ranged on the outside of the arena of the live stock pavilion were 12 aged herds, or 60 head, of Shorthorn cattle, the aristocracy of the breed. On the inside of the big oval were arrayed 10 aged herds of the Herefords, 50 head, the best of the Hereford show, and therefore premier whitefaces.

A Wonderful Spectacle

In other portions of the big arena, now far too small for the demands made on it, and at one time the largest live stock show pavilion in the world, were being shown the Aberdeen Angus, Red Polled, Holsteins, Brown Swiss and other classes, all large. It was a veritable kaleidoscope of color, with not an inch of room to spare, so thickly was the ring populated with the breeds represented.

The spectators' space in the center of the arena had been drawn in in anticipation of the big cattle classes, and there was an island of humanity in the center of the arena, surrounded by a sea of cattle, while on the shore or the arena seats, people were packed for the final events in the beef breed showings and for the dairy cattle shows that were opening.

Stage Setting Appropriate

It was a great spectacle, especially worthy of being staged in a great agricultural section, young in years of settlement, but far progressed in animal and crop husbandry. Working as officials of the cattle show were Ames men, young and old, some judging, others superintendents of sections, others clerks, but all Ames men, and all Ames men in the spirit of being devoted to the best there is in animal husbandry.

The finale in the Shorthorn show was a great event. Groups and herds were large and excellent, a fanfare to a great symphony of color and fitting. As much could be said of the Hereford show, an event seen but seldom, and probably not at any other place except in the American Royal or the International. The Angus show, when it came to the female and championship classes, developed into a regular Angus show. Truth is that when the bull classes were put to a close analysis there was much lacking to make the 1921 Angus show at Des Moines and the Iowa State Fair one to be compared with former years.

FARM BOYS' AND GIRLS' LEADER, DES MOINES, IOWA.

Over 600 Iowa club boys and girls occupied prominent seats at the 1921 Iowa State Fair. They showed the grown folks on the farms as well as the city visitors that they could produce blue ribbon stock, pick out the blue ribbon winners, select the best corn, prove by demonstrations how to cook, bake and sew, decorate the home and handle other phases of farm and home life.

Club boys 10 to 18 years of age and some of their sisters, showed 460 breeding and fat hogs, 185 fat steers and heifers, 950 prize chickens, 28 purebred heifers, 27 purebred dairy calves and a fine bunch of purebred sheep, 28 boys' teams gave five demonstrations in animal husbandry and agriculture.

Housing the Boys and Girls

Four hundred thirty-seven boys were housed in the boys' dormitory with F. P. Reed, superintendent, assisted by Mr. Graham and Mr. Pipher, Y. M. C. A. athletic men. The dormitory is equipped to take care of a big bunch of boys. It has shower baths, toilet rooms, is well ventilated and comfortable. The state fair management furnished cots and mattresses and the boys bring their own bedding.

Nearly 200 girls occupied the girls' dormitory as mentioned elsewhere.

A state organization was affected and the following live club members of Iowa were elected as officers: President, Wm. Cihak, Creston; vice-president, Elmer Post, Moulton; secretary, Ivan Beck, Corning; and Harold Pace, Muscatine, treasurer.

County committees will be named by club leaders and members in each county to work with the farm bureau in organizing standard clubs in every township and county. A committee on county and state fairs will constitute one of these committees. All of these county committees will be recommended by the folks at home and then approved by the state officers. The boys were very enthusiastic about this new organization which will give them official standing at home and through the state and enable them to help build up club work in all of its departments.

Team and Individual Judging Contests

Around one hundred and sixty-three boys and a few girls made up thirty-two judging teams and individuals consisting of county winners in judging work. They had been coached in judging livestock and corn and gathered at the state fair for the final test. The livestock judging teams passed on two classes of draft horses, two classes of market hogs and one class of dairy cattle and one of fat steers.

The Baby Beef Show

One of the big attractions at the dairy cattle barn was the baby beef show. "A finer bunch of Hereford fat cattle has never been seen at a fair or show ring," declared Mr. H. H. Killdee, in charge of the animal husbandry department at Ames College and one of the judges. Mr. Killdee also stated that baby beef club boys have proven that baby beef is the most economical and profitable beef on the market today. Baby beeves when finished weigh around 900 to 1,000 pounds and will run 19 to 20 months of age. Similar comments were heard from prominent judges and breeders.

There were over 70 calves in the Angus class, 47 "white face" and about 30 Shorthorns. One Angus prize steer won the grand championship again this year.

Purebred Heifer Division

There was healthy competition in this class of club stock. Jefferson county and several others brought up some fine exhibits of Herefords, Shorthorns and Angus.

Results in the Boys' Demonstration Team Work

There were twenty-eight boys in Animal Husbandry and Agriculture demonstration teams, competing for honors at the state fair this year. Poultry teams lead with fourteen; five in the pig club, four in the beef; three corn, and two in spraying.

The poultry team from Appanoose county won out in the poultry demonstration work and also won the championship over all the boys' demonstration teams and won the much coveted trip to the Sioux City Interstate Fair. Jefferson county dairy team won second.

Club Poultry Makes a Big Show

Last year Iowa poultry club members with the help of Mr. C. P. Earle, state poultry club agent, put on a very ambitious poultry show of 650 fine purebred chickens. At that time the work was organized in about twenty counties and the boys and girls show attracted a lot of attention for fair visitors and poultry breeders.

This year the boys' and girls' poultry show was housed in the main poultry building as the "junior department exhibit." Mr. Earle was sent out this year by the Iowa State College to organize the work in more counties. Many county agents called for Mr. Earle and this year a show consisting of 950 birds was put on. Mr. Earle reports seventy-eight poultry clubs organized in thirty-three counties and the demand for the work in other counties is growing. Fourteen demonstration teams explained every phase of poultry husbandry in the boys' and girls' building.

Boys and Girls Show Fine Purebred Pigs

The pig club tent or rather its contents of prize porkers attracted general interest among swine growers and breeders at the Iowa State Fair and it was full of young breeders. A large tent was erected next to the sale ring building to accommodate some 416 choice club pigs. Owing to the heavy rain during the week, the ground became very muddy and pigs had to be washed whenever shown. Iowa boys and girls are putting on a fine pig club show at the Iowa State Fair.

The Iowa pig club feature probably outclassed any other state pig club show in number and possibly in quality. Mr. J. E. Downing, secretary of the Berkshire Association, made the statement that Iowa pig club boys and girls had put over the biggest show ever seen at any state fair thus far.

FINANCES

On December 1, 1920, the Department had on deposit with the Treasurer \$73,354.64. There was an outstanding indebtedness amounting to approximately \$33,000. This indebtedness was for balance due on contracts for the brick cattle barn and sale pavilion. This left a net balance, after paying contracts, of \$40,000 for 1921 operations.

The receipts from sources other than fair were \$48,690.66. The principal items were state appropriations for the following purposes: Paving assessment against state fair grounds, \$11,779.94; for additional land, \$4,513; repairs and improvements to buildings, \$12,500; support fund for the Department of Agriculture, \$2,400; and insurance premiums on buildings, \$1,000. Other items of receipts were: Fees, Stallion Registration Division, \$4,225.50; borrowed money, \$3,000; rentals from sale pavilion, \$1,181; interest on daily balance and time deposit, \$2,119.48; salvage from brick barn No. 2, \$1,535. The minor items are fully set out in the financial statement made a part of this report.

Iowa State Fair

The total receipts of the 1921 Iowa State Fair were \$297,695.25. This was a decrease of \$113,281.53 from 1920; \$23,949.30 from 1919, and an increase of \$46,498.63 over 1918. The latter year was the best year the fair had financially until the unusually prosperous years of 1919 and 1920.

The receipts from ticket sales amounted to \$184,708.50. This was a decrease of 32% from 1920 and 12% less than 1919, but exceeded the receipts from ticket sales in 1918 by 10%. The receipts from all other sources of the fair, including concession space rental, stall and pen rent, etc., were \$112,986.75. This was a decrease of 20% from 1920, and an increase of 3% over the receipts from the same sources during 1919.

The attendance of the fair and the receipts compare favorably with any year, with the exception of 1919 and 1920, which years we are now obliged to look upon as abnormal and unusually prosperous and they should not be used in comparison with 1921 or as a basis for making up budgets or plans for future fairs. The itemized statement, made a part of this report, sets out in detail the receipts from all departments of the fair.

The total cost of the 1921 fair was \$294,124.27, leaving a profit on the operation of the fair of \$3,570.98. There was paid in cash premiums, \$120,427.64. This was an increase of \$7,807.49 over the amount paid in 1920. The other operating expenses, including cost of attractions, advertising, payrolls in all the various departments, in fact all the expense in putting on the fair with the exception of premiums, amounted to \$173,696.63. This was a reduction of \$12,970.91 in similar expenses of the 1920 fair. In other words, the management was able to reduce the total expense of the fair \$5,163.02, and at the same time increase the premiums \$7,807.49 over the amount paid at the 1920 fair.

The items listed under expense other than fair, improvements or maintenance, cover the expenditure of the Department of Agriculture and items not chargeable under the above headings. The principal items are as follows: Expense of Stallion Registration Division, \$3,752.77; Publicity Department, \$2,097.79; expense of 1920 fair paid during 1921, \$2,077.19; paving assessment against state fair grounds, \$11,779.94; bills payable, \$3,000; and numerous small items fully set out in the itemized statement. The total expenditure under this heading was \$26,609.51.

Maintenance of Grounds and Buildings

The item of maintenance of grounds and buildings has become of considerable importance and a heavy drain upon the receipts of the fair. The value of the buildings alone amounts to over \$900,000. Figuring a depreciation or maintenance charge of 3%, would amount to \$27,000 annually, and this does not take into consideration maintenance of the light system, sewer system, water system, fences, streets and walks, all of which are charged to real estate.

The Board expended during the past year, under this heading, \$20,037.01 and the average expenditure for maintenance during the past three years has been a little over \$21,000 per year. The Thirty-ninth General Assembly appropriated \$12,500 for the two-year period for this purpose. The appropriation for this purpose should be increased to about \$25,000 annually to take care of some large items that should have attention at an early date. These items include a new roof on the swine barn and the grandstand, porch roof on the administration building, and re-coating the roof on machinery hall.

Improvements

The Board did not attempt to make any extensive improvements outside of completing the cattle barn and sale pavilion. There was expended on this building during the past year, \$31,109.05 and there is still due about \$3,700 on contracts. This brings the total cost of the building up to \$210,802, and to this should be added the value of the two brick barns incorporated in and made a part of the completed structure. The value of these two barns, based on cost less the annual depreciation, is \$9,608, making the total cost of the barn, as it now stands \$220,410. The other items of improvements are fully set out in the statement and include additions or permanent improvements to existing buildings. The total amount spent for additions and permanent improvements during the past year was \$54,909.74.

Summary

The balance on hand December 1, 1920, was \$73,354.64; the receipts from sources other than fair, \$48,690.66; receipts of fair, \$297,695.25, making the grand total receipts from all sources, \$419,740.55.

The disbursements were as follows: Expense other than for fair, \$26,609.51; maintenance grounds and buildings, \$20,037.01; additions and permanent improvements, \$54,909.74; and expense of the 1921 fair, \$294,124.27, thus showing a total expenditure of \$395,680.53. This leaves a balance in the treasury November 30, 1921, of \$24,060.02.

REPORT OF TREASURER, W. W. MORROW, AFTON, IOWA.

Mr. President and Gentlemen of the Convention:

In accordance with the wishes of the State Board of Agriculture, I herewith present a report of receipts and disbursements for the fiscal year ending November 30, 1921:

Balance on deposit December 1, 1920.....\$ 74,963.23

Received from ticket sales and cash turnstiles as follows:

106,870	general admissions at 75c.....	\$ 80,152.50
528	round up at 75c.....	396.00
21,422	general admissions after 6 p. m. at 25c....	5,355.50
11,117	Sunday, August 28, at 50c.....	5,558.50
20,381	children's half fare at 25c.....	5,095.25
2,427	campers' tickets at \$3.00.....	7,281.00
13,422	automobile tickets at 50c.....	6,711.00
118	taxicab tickets at \$5.00.....	590.00
1,767	88th division tickets at \$1.00.....	1,767.00
2,018	exhibitors' tickets at \$3.00.....	6,054.00
2,941	day grandstand (box) at \$1.00.....	2,941.00
16,249	day grandstand reserved lower half at 75c..	12,186.75
18,931	day grandstand (reserved upper half) at 50c	9,465.50
11,507	day grandstand (children, paddock) at 25c	376.75
487	quarterstretch tickets at 50c.....	243.50
13,612	day grandstand paddock at 50c.....	6,806.00
2,560	night grandstand (box) at \$1.00.....	2,560.00
14,194	night grandstand (reserved lower half) at 75c	10,645.50
15,583	night grandstand (reserved upper half) at 50c	7,791.50
1,731	night grandstand (children paddock) at 25c	432.75
17,204	night grandstand (paddock) at 50c.....	8,602.00
7,049	night stock pavilion (reserved) at 50c.....	3,524.50
688	night stock pavilion (standing room) at 25c	172.00

Total ticket sales.....

\$184,708.50

Received from Secretary and Superintendents as follows:
Secretary's Department:

Fees Stallion Registration Division.....	\$ 4,225.50
State appropriations	32,192.94
Miscellaneous receipts other than fair.....	6,986.30
Superintendent of Grounds.....	3,166.44
Interest on account.....	2,119.48
Superintendent Horse Department.....	2,001.68
Superintendent Cattle Department.....	2,885.00
Superintendent Swine Department.....	3,897.50
Superintendent Sheep Department.....	459.00
Superintendent Poultry Department.....	990.25
Superintendent Machinery Department.....	12,402.20
Superintendent Agricultural Department....	2,055.00
Superintendent Dairy Department.....	1,953.60
Superintendent Exposition Building.....	3,325.00
Superintendent Concessions and Privileges...	45,868.00
Secretary, sale of light and power.....	1,764.58
Superintendent Speed Department.....	5,739.70
Superintendent Forage Department.....	10,942.07
Association Special Premiums.....	15,062.44
Secretary, advertising in premium list.....	1,605.60
Secretary, miscellaneous receipts of fair....	2,035.13

Total receipts of fair other than ticket sales	\$161,677.41
--	--------------

Grand total receipts	\$421,349.14
----------------------------	--------------

DISBURSEMENTS.

Expense warrants paid.....	\$275,399.81
Premium warrants paid.....	120,670.33

Total disbursements	\$396,070.14
Balance on hand November 30, 1921.....	25,279.00

To balance	\$421,349.14
------------------	--------------

Respectfully submitted this 1st day of December, 1921,

W. W. MORROW, Treasurer.

December 1, 1921.

To the Directors of the State Board of Agriculture:

Gentlemen: This is to certify that there was on deposit at the Central State Bank on November 30, 1921, a time deposit of \$20,000.00 and a balance to the credit of W. W. Morrow, Treasurer of the Iowa Department of Agriculture, the sum of \$5,279.00, making a total credit of \$25,279.00

Yours very truly,

J. W. HAWK, Assistant Cashier.

President Cameron: It has always been customary for the treasurer to make a report and the secretary has already stated this report is submitted in printed form along with the secretary's report. As you all understand, no doubt, the expert accountant of the State checks over the department the same as he checks over every department in the state house, so it is not necessary to take any action as far as the report of the secretary and treasurer is concerned, because these reports are made to the Executive Council and they approve them or disapprove them as the case may be.

Next is the report of Final Crop Estimate for 1921, by Chas. D. Reed, director Iowa Weather and Crop Service Bureau.

WEATHER AND CROP REVIEW.*

Chas. D. Reed: The mildest of 31 winters preceded the crop season of 1921. Winter grains and grasses, clover and fruits suffered very little winter killing. Spring opened very early. A little spring wheat seeding was done in the southern counties in February and considerable seeding of oats, spring wheat and clover was done in March.

Sudden and severe freezes, March 28, April 9-10 and 16-17, froze out the oats the worst in over 30 years. At least 50 per cent of the acreage had to be reseeded and some of this was seeded the third time. Many thin stands of oats were allowed to grow because of the clover seed sown therewith, that would otherwise have been plowed up for corn. It appears that germinating oats that had not yet showed above ground were damaged more than those that were two inches high. The latter, though frozen down, mostly recovered.

Tree fruits advanced too rapidly and were practically a total loss from the spring freezes, except in the northern counties where they were not so far advanced and temperatures were not so low. The warm and sunny May was favorable for young pigs, lambs and chicks. The litters of pigs were large and strong.

Plowing for corn was favored by the warm, dry spring. By May 1 most farmers had their ground ready for the planter and were waiting for a safe date. Some planting had been done in the extreme south and the corn was up and looking well. By May 15, 58 per cent of the corn had been planted and by June 1, 97 per cent.

Abnormal heat in June with ample soil moisture caused corn to make phenomenal growth. In many fields it was knee high by the middle of June and too tall to cultivate by June 21. Potatoes made a great growth of tops but the set of tubers was disappointing. The weather was too warm for setting out commercial cabbage plants. The heat was too great for proper filling of spring grains. Oats suffered greatly and spring wheat was nearly a failure. Many horses died from overheating.

Winter wheat harvest was nearly completed by July 4. Though rain interfered somewhat in the west central and southwest counties, harvest weather was generally favorable, except that it was too hot for horses and men. Corn began to tassel early and by July 16, 75 per cent was silked. Drouth became serious in the north central counties and southeast to the boundaries of the State during July. In several counties the July rainfall was less than 20 per cent of normal, while the heat was intense. Potatoes were injured beyond recovery. Thrashing was well under way during the last ten days of July. Winter wheat turned out better than expected and only about one bushel below the ten-year average. Spring wheat and oats were disappointing.

Copious rains, August 1-2, broke the drouth. Corn made a remarkable recovery; potatoes that had not died recovered somewhat. Thrashing was

*All reference to the effect of weather on crops in this publication is the result of co-operation between the United States Weather Bureau and the Iowa Weather and Crop Service.

considerably delayed by rains, especially in the southwest district, but by September 1, 94 per cent of the thrashing had been completed, which is 17 per cent more than normal and the greatest of record. Shocked grain was considerably damaged by wind and rain storms. Much of it sprouted. These wind and rain storms tangled and prostrated much of the corn in the south and east portions of the State.

This made fodder cutting and silo filling difficult and in some cases impossible. More wind and heavy rain in September added to the difficulty of husking later. During the third week in September the warm, humid, cloudy weather caused much down corn to sprout, mold and rot. The warm season matured the corn early. Excellent samples of mature corn were gathered as early as August 23. There were no frosts of importance till the first week in October. Only about two per cent of the corn was immature at that time.

Generous and timely rains in August and September made soil conditions generally excellent for fall plowing and preparation for winter wheat seeding and a considerable increase in acreage has been reported.

October and November were mostly favorable for corn husking and other fall work. Corn dried out well. Reports from elevators having moisture testers showed that corn averaged to contain 16 per cent of moisture during the last week in October and the same in the last week in November. By November 1, 50 per cent of the corn was husked and by December 1, 90 per cent. Nearly 8 per cent of the crop was "hogged down."

Winter wheat is entering the winter in excellent condition. On December 1, 92 per cent of the acreage seeded had made good growth and become well established; 7 per cent had germinated but made little showing; and only one per cent had not germinated.

As a whole the crop season was favorable for corn and hot weather crops and unfavorable for spring grain, potatoes and other cool weather crops. Prices have been discouraging, resembling those of twenty or more years ago. The gross return per acre of corn, based on December 1 price is only \$12.90, while oats is less than half that. Three large corn crops in succession have greatly overdone corn production, especially in view of the decreased live stock production. On two other occasions, 1898-1900 and 1904-1906, three big yields per acre of corn have occurred in succession and in each case a low yield followed. It may follow this time and might be a blessing in disguise. The total value of Iowa crops in 1921, based on December 1 prices, is \$305,459,429, which is more than a quarter billion less than in 1920 and less than one-third of 1919.

FINAL CROP REPORT OF THE STATE, 1921.

The following estimates of acreage, yield and value of the crops of the State, derived from the reports of hundreds of correspondents well distributed in each county, are the result of the joint effort of the U. S. Bureau of Markets and Crop Estimates, of which Mr. Frank S. Pinney is Agricultural Statistician, and the Iowa Weather and Crop Service. The table showing the total value of crops does not include or take into account live stock products.

Corn.—The estimated acreage was 10,330,000; average yield, 43.0 bushels per acre; total yield, 444,190,000 bushels; average price, \$0.30 per bushel; total value, \$133,257,000. Only 2 per cent of the crop was reported to be soft or immature and 90 per cent had been husked on December 1. About 8 per cent was hogged down. The quality is fairly good, though there was unusual damage from down corn which molded, sprouted and rotted. That which came to the elevators during the last week in November had a moisture content of 16 per cent. The gross value per acre was \$12.90 which is the lowest since 1904.

Oats.—The estimated area harvested was 5,960,000 acres; average yield, 26.0 bushels; total yield, 155,077,000 bushels; average price, \$0.23; total value, \$35,667,710.

Spring Wheat.—Area harvested, 114,000 acres; average yield, 10.3 bushels per acre; total yield, 1,174,000 bushels; price per bushel, \$0.87; total value, \$1,021,380.

Winter Wheat.—Area harvested, 465,000 acres; average yield per acre, 19.2 bushels; total yield, 8,928,000 bushels; average price, \$0.90 per bushel; total value, \$8,035,200.

Barley.—Area harvested, 166,000 acres; average yield per acre, 23.5 bushels; total yield, 3,901,000 bushels; average price, \$0.42 per bushel; total value, \$1,638,420.

Rye.—Area harvested, 39,544 acres; average yield, 16.1 bushels; total yield, 636,657 bushels; price per bushel, \$0.73; total value \$464,760.

Flax Seed.—Area harvested, 10,840 acres; average yield, 8.7 bushels; total yield, 94,300 bushels; total value at \$1.53 per bushel, \$144,279.

Timothy Seed.—Area harvested, 243,000 acres; average yield, 4.47 bushels; total yield, 1,086,000 bushels, total value at \$2.31 per bushel, \$2,508,660.

Clover Seed.—Area harvested, 125,000 acres; average yield, 1.6 bushels; total value at \$9.72 per bushel, \$1,944,000.

Potatoes.—Area harvested, 96,500 acres; average yield, 43 bushels; total yield, 4,149,500 bushels; average price, \$1.40; total value, \$5,809,300.

Hay, Tame, not including alfalfa.—Average yield, 1.39 tons per acre; total yield, 4,104,000 tons; average price, \$9.08 per ton; total value, \$37,264,320.

Hay, Wild.—Average yield, 1.16 tons; total yield, 551,000 tons; average price, \$7.47; total value, \$4,115,970.

Alfalfa.—Area harvested, 187,000 acres; average yield, 2.97 tons; total yield, 555,000 tons; average price, \$12.92 per ton; total value, \$7,170,600.

TABULATED CROP SUMMARY, 1921.
IOWA

Crop	Acres	Average yield	Total yield	Average price	Gross value per acre	Total value
Corn	10,330,000	43.0 bus.	444,190,000	\$ 0.30	\$ 12.90	\$133,237,000
Oats	5,960,000	26.0 bus.	155,077,000	0.23	5.98	35,067,710
Spring Wheat	114,000	10.3 bus.	1,174,000	0.87	8.96	1,021,380
Winter Wheat	465,000	19.2 bus.	8,928,000	0.90	17.28	8,035,200
Barley	106,000	23.5 bus.	3,901,000	0.42	9.87	1,688,420
Rye	39,544	16.1 bus.	636,657	0.73	11.75	464,760
Flax Seed	10,840	8.7 bus.	94,300	1.53	13.31	144,279
Timothy Seed	243,000	4.47 bus.	1,086,000	2.31	10.33	2,508,660
Clover Seed	125,000	1.6 bus.	200,000	9.72	15.55	1,944,000
Potatoes	96,500	43.0 bus.	4,149,500	1.40	60.20	5,809,300
Hay, tame, excluding alfalfa	2,961,000	1.39 tons	4,104,000	9.08	12.62	37,264,320
Hay, wild	475,000	1.10 tons	591,000	7.47	8.67	4,115,970
Alfalfa	187,000	2.97 tons	555,000	12.92	38.37	7,170,600
Pasture and grazing, estimated	10,035,000	---	---	5.56	---	55,794,000
Ensilage, estimated	207,000	8.00 tons	1,656,000	2.50	20.00	4,140,000
Sweet corn, commercial crop	15,000	3.1 tons	46,500	7.00	21.70	325,500
Pop corn, estimated	13,000	26.0 bus.	338,000	2.54	66.04	838,520
Buckwheat, estimated	5,000	15.0 bus.	75,000	0.78	11.70	58,500
Fruit crop, estimated	---	---	---	---	---	4,000,000
Garden Truck, estimated	---	---	---	---	---	3,000,000
Miscellaneous, estimated	---	---	---	---	---	2,380,710
Total value, not including live stock products, for the year, 1921	---	---	---	---	---	\$305,459,429
1920	---	---	---	---	---	500,400,638
1919	---	---	---	---	---	950,036,002
Most recent year with crop value as low as this year, 1905	---	---	---	---	---	302,286,212

Ensilage, acreage production and value, is included in corn and therefore excluded from grand total.

Frank S. Pinney, Agricultural Statistician, U. S. Bureau of Markets and Crop Estimates.

Charles D. Reed, Director, Iowa Weather and Crop Service.

President Cameron: Gentlemen, you see that banner hanging in front of you. I would like to have Mr. Barney come down here and tell us about it and how it comes to be here.

Dairy and Food Commissioner W. B. Barney: Mr. Chairman and Gentlemen: I have been asked to tell why we have that banner, and I am reminded of a little story I heard told about a couple of Irishmen who were jailed for theft. One had stolen a watch and the other had stolen a cow, and in the morning when they were called for breakfast the Irishman that had stolen the cow asked the other fellow what time it was. He said, "Why it's sure time to milk." I want to say it is really a good time to milk, for the reason that there is no way that we can market our products to better advantage than through the dairy cows.

So far as that banner is concerned it has been won by the Minnesota people for about eight consecutive years, I think, and one of the reasons they have been able to win it is on account of the large number of creameries they have in Minnesota as compared with ours. They have something like seven hundred creameries in Minnesota as compared with about 420 in Iowa. We have about twelve more than we had a year ago. The banner is offered for the ten best tubs of butter shown at the National Butter-makers Association. They have been able to win it, as I say, because they had very many more entries than Iowa. But we have been advancing more rapidly in Iowa in the way of improving our products in the last five or six years than they have. We caught up with them this year and won the banner for the best average ten tubs of butter displayed. You will notice as the banner states there were twenty-one states in the contest and Iowa won the banner. We hope to continue to win it. It is an honor that has come to the state, I think a great honor. In fact, I feel that nothing ever happened in the dairy industry since I have had anything to do with it that has meant more to Iowa than the winning of this banner. I hope we shall continue to win it.

President Cameron: We have with us today a gentleman who has always been interested in our work. I remember my first acquaintance I had with the gentleman; he was a delegate from the state of New York to a meeting of the International Association of Fairs at Chicago, and I know he has continued that interest while he has been in Iowa. I now take great pleasure in introducing to you, President R. A. Pearson, of the Iowa State College of Agriculture.

President Pearson, of the Iowa State College of Agriculture: How would you feel if you were called upon to defend your mother or your mother-in-law? Sometimes I have felt just about as I would under these circumstances. Sometimes I have felt I must stand up and defend agriculture. It is a strange feeling. Sometimes I have felt I must stand up and defend agricultural education, the thing which has done so much to put agriculture of this country in the position where it is today. I wonder where we would be today if the laboratories investigating agricultural problems had been closed ten years ago. I wonder where we would be today if the instruction

which has been given in agriculture in the past ten years had not been given. Some of the most wonderful work in research has been in the field of agriculture. Talk about detective work, Burns and the other great detectives. Their work is no more clever than the investigations of these research men into the problems relating to agriculture. Do you remember about the time they were called upon to find and convict the criminal causing the spread of wheat rust in this country, which was costing the farmers millions and tens of millions of dollars every year? And how they went at it! They got the habits of that criminal and they studied it in season and out, and they followed him in his dark and devious ways, and finally demonstrated a new fact in the field of science, something that had been known but a short time. The wheat rust forms little spores and these little spores cannot grow on wheat. When the spores are separated and carried off through the air and settle on the grass they die, but if they settle on a barberry bush there they grow. They furnish more spores and then again some of them get back to the wheat. So the easy way to get rid of the wheat rust is to get rid of the barberry. Scientists discovered the criminal, learned his habits, told us how to kill him and get rid of him. Today in Illinois in quite a large area there is a new disease called "take all." It came in from Austria a few years ago. When it strikes a wheat field it does take all. Its spread is surely alarming. The detectives have not yet learned the secrets and history of that criminal, and until they do the persons engaged in raising wheat in that vicinity are tremendously concerned and anxious, and every year will lose considerable sums of money. I could give many illustrations of that kind, but I am not going to do it. The thought I want to leave with you is that agricultural investigation and agricultural education are foundation stones in connection with the agricultural progress of our nation, and agriculture is the foundation stone upon which the prosperity of our nation rests.

At the present time we are suffering world distress. Some of us who have the good fortune to live in Iowa do not appreciate how keen the distress is in some other places where people are actually starving. Industry has been cut down; many mills are stilled, and other trades are lagging. Many warehouses which ordinarily should have twenty-five to a hundred thousand dollars' worth of finished product waiting for the market are crammed full, and they have two or three or five hundred thousand dollars' worth of material waiting for market. The manufacturer has borrowed from the bank to the limit of credit, and purchasers come not. They have closed their doors and their employes are looking for work and getting temporary jobs as best they can. And need I say anything about the condition of agriculture? You surely know it—you know it well.

In the great field of labor there is distress. Normally there are about a million and a half persons out of employment in this country at this time of the year. At the present time there are from three million to five million out of employment. They are wondering how they are going to pay rent. They are wondering how they are going to feed the little ones this winter. The situation is serious.

There are a good many remedies. Different remedies would work if they only were applied. I am going to refer to one because I cannot help think-

ing it is most important. It is the development of measures which will give more hope and more confidence to the great farming classes of our country. When the farmers of this country are again offered something definite, worth while and profitable to do, so they may continue operations and not continue to run further in debt, then the farmers in this country will become more active, will begin to buy, and then factories will open, the little towns will show new life, the big cities will hum with activity and prosperity will have returned.

What is the reason for the distress? There is one word of course that comes into our minds and explains it all. It is war. That is the explanation for the trouble, and let's see a little more definitely if we can how that applies to the present situation. I might mention three things which are of the utmost importance from the farmer's standpoint, suggesting, if I may, remedies which it seems have got to be worked out in some way or other before we get out of the darkness that surrounds us.

In the first place we have at the present time in this country an excess of production of agricultural products—especially corn. Now that is a much more serious matter than the excess of production of most other kinds of products. If suddenly there should appear in the state of Iowa ten per cent more shoes than are needed it would not cause any very great distress. You and I have got a lot of old shoes, wearing them a little bit longer than we like to wear them because we don't think we are ready to buy a new pair of shoes. But if ten per cent more shoes came tomorrow, what would happen? Dealers in shoes would reduce the price a little and induce this man here and that man over there to buy and several of us would get a new pair of shoes. In a little while the ten per cent of shoes would be absorbed. What happens when we have a ten per cent increase of the corn crop or food crop? We can absorb a little additional but we can't absorb very much. When we go to the hotel and pay a dollar for a good dinner we can't absorb another one, we wouldn't do it even if we could get it for five cents, we don't want it. Food is different from other kinds of supplies. This country has an excess of food supplies—we have an over-production. Do you realize that this nation in its tremendous war efforts, for which praise could not be given in too strong terms, this nation increased its acreage of cereal crops since the period before the war and up to the present time by about twenty-two million acres. Think of it! The corn crop of 1921 was increased nearly three million acres in the United States, and the result has been that instead of producing a little less than five billion bushels of cereals, which was the average before the war, last year, 1920, we produced more than six billion bushels of cereals. And this year we will produce close to five and a half billion bushels of cereals. No one to blame. We were going to win the war—we did win it, and we speeded up our production, and we have kept up the speed.

Along with renewed efforts came unusually good climatic conditions. In certain parts of the country they had large production of food products, where normally the production is small. So we have excess production. The one thing that stands out strongest is the excess in production of corn, an average of about three hundred million bushels this year and last year

above normal. Then on top of our unusual production we brought over from the war great food stocks that had been produced under abnormal conditions and had been purchased under abnormal conditions, and these stocks had to be disposed of. Not only were there the immense supplies the government had, but many stocks private concerns and private individuals had accumulated, and these had to float out upon the market.

Along with all this, we did not have the demand from the other side of the ocean which we should have when conditions over there are as they are now. We have sent a good deal abroad. We have exported more than a good many realize. Some think our exports have fallen off. The average exports of five leading cereals in the period before the war was only about eight and one-half billion pounds a year; whereas in the year ending June 30, 1921, it was twenty-eight billion pounds—an increase of 234 per cent in our exports of cereals. In our exports of dairy products we increased over 1,000 per cent. Our exports of meat products not so much, 27 per cent. Our exports have been going out in larger quantity but not enough to take care of the starving millions in Europe. We are told by men who should know that this winter there will be not less than three hundred million people, three times the population of the United States of America on something like thirty per cent of normal rations. What a crime against civilization, what a reflection on the intelligence of man that we should have this abundance and over there they are starving for it!

These conditions and this excessive production have made unusually low prices on the farm. The farmer's average price last June, as compared with before the war, on all farm products, was represented by 106, or it was six per cent more than normal before the war. That was what the farmer was receiving on everything. On some articles he was below and on some articles a little above, but the average was only six per cent. And the average of all wholesale prices on all products including farm products last June was 151—fifty-one per cent above the normal. It is very interesting to see how these wholesale prices have been soaring since the war. Do you know that the highest point in the average of all wholesale prices of all commodities in the United States was reached in May, 1920, only a little over a year ago, when the average was 276 per cent of the average before the war, 1914. The average reached the top in May last year, and in June last year it was 275 per cent, and it has been slipping down, down, down until last June, as I said, it was 151 per cent. What is the situation of the farmer then? He must go into the market to make his purchases with average prices fifty per cent above normal and he is getting himself an average of only six per cent above normal; and in some districts like the state of Iowa he has been punished far worse than that.

On top of that the farmer has been paying large costs. It was my privilege to serve in President Harding's unemployment congress in Washington a few months ago, and a great many interesting figures were submitted to us. Here are some submitted by the railroads and I give them to you just as they were given to us. Draw your own conclusions. In 1916 the railroads of the country were paying a little less than one and a half billions for labor; in 1920 the amount had been raised to the rate of nearly four billion dollars for labor. There had been an increase of

only twenty-three per cent in the number of laborers on the railroads, and the increased pay was 166 per cent—more than double. It is a little less now. I am not making any criticism of railroad labor, I am not criticising unions, I think unions have a good purpose to serve. I am giving you the facts as given to me. Who pays the increase of towards two billion dollars that is going to railroad labor? The farmers are contributing about half of the business of the railroads of the United States in their shipments and in the supplies which they receive. I might give you further figures to show other high costs paid by farmers. They feel these increases the more because of their reduced income.

Then there are wide margins between the prices the farmer is receiving and the price the consumer pays for his products. Here are some figures from government bureaus. Let me read a few. In August, 1921, about three months ago, the farmers were receiving sixteen per cent more for their hogs than they received the corresponding date in 1913, before the war. The consumers were paying ninety-seven per cent more for their hams at wholesale. The farmers last August were receiving nine per cent less for their cattle than they received in 1913. The consumers were paying fifty-seven per cent more for their sirloin steak and sixty per cent more for their round steak. These are just facts, I am not presenting any argument to you. We need facts if we are going to decide great questions. Farmers received twenty-four per cent less than before the war for their hides, and the prices of boots and shoes were 125 per cent more to the purchaser than they were before the war. The freight on shoes had gone up 110 per cent and the wages in the shoe factories had doubled. One or two more. Farmers received eight per cent less for their wool, and woolens were selling for fifty-five per cent more; and freight had gone up 110 per cent, more than double, and wages had about doubled. Building labor stands about ninety per cent to ninety-seven per cent more. What was the farmer's labor? You know the farmer doesn't contract in advance for his labor. He puts in labor and sells the product for whatever the market is offering and gets wages from the grain and live stock which he sells. Bituminous coal was selling for an advance of eighty-six per cent, and anthracite coal at ninety-eight per cent more than before the war. Wages of the coal men were seventy-three per cent more. That was only last August.

Now a few words about the remedy. I wish the good Lord would give it to some of us to see the remedy. I am not able to tell you what the remedy is. The remedy has to be worked out, just like any other problem. You must put two and two together, discuss it with your wives and sons and neighbors and business associates and the remedy will finally appear. In a word, I think that the most effective remedy—we can go into the legislature, we can have commissions, we can have investigations, but I think the most effective way is to educate the public as to farm costs, as to the hours of labor on the farm, the pay that the farmers are receiving, the fact that not only the farmer works but the entire family works in producing the crops and that they proceed on faith through it all. Many a farmer has put in his whole life time and at the end of his life has nothing to show in the way of accumulation except the increase in the

value of his land. Sometimes that is a good sum. I believe there is a great opportunity in the state fairs and county fairs to do something in this emergency along the educational line. I think if they did not do any more than just put up one chart on the outside wall of some building and show a few of these facts that they would help start somebody thinking in the right direction. Any one could suggest some interesting subjects for such exhibits. That is one thought I wanted to bring to you. We want light on this problem, we want an understanding of the facts, and you can depend on the American people to work out a solution of the problem when they understand the facts. When they don't understand the facts they are just like anybody else, they are likely to rush to a conclusion and do the wrong thing.

We want to stimulate exports. The government deserves a lot of credit and Secretary Wallace deserves a lot of credit. He has some of the best experts he can find in Europe at this time, doing all they can to hold onto these markets, and even to supply them in larger quantities. We want to stimulate meat consumption at home. As industry picks up and wages are paid to a larger number of employes, as the four million people get jobs there is going to be increased consumption. Every time you increase the consumption of meat one pound you take away twelve pounds of corn. That is the best way to dispose of the surplus corn crop. I think sooner or later we have got to work out a system of storage for surplus crops. There should be facilities to take care of the surplus that comes in occasional years. Put it in warehouses and put it under a lock so that the world will know that it is taken off of the market because it was not needed and is to be carried over to the next year. That is a way part of the increased corn crop can be taken care of. I don't want this argument to be misunderstood. I am not advocating a corner on the market or anything of that kind. The soil of this country has been called upon to furnish too much of its fertility in this strenuous period of the war. The great argument for the decrease of the corn crop is that the soil needs rest and needs clover and alfalfa and sweet clover. If we could put two hundred million bushels of corn into storage, and we could do it if we had the organization—it would not be anything for us to do a little job like that—what would it mean? It would mean then we would have a normal supply of corn on the market, there would be a normal price for corn and the farmers would at once take hope and begin to buy machinery and begin to buy materials to build, and supplies, and start the industrial machinery again all over the United States; and that two hundred million bushels of corn in storage would stand there like a great electric sign, "Thou must not overplant another year and thus get yourselves into further trouble." And they would not overplant. I think that is one remedy which we have to develop. We are told we ought to raise prices. I would like to have somebody tell us how to raise prices. Prices are governed according to the law of supply and demand. We cannot raise prices unless we make the supply better related to the demand. At the present moment we have this excessive crop of corn.

Again I want to say that we should educate the public in reference to the pay the farmer receives in relation to the pay received in other in-

dustries, and that the farmer is being crowded between two mill stones of small income and large outgo and it is getting to the point where he has not any more to go out. So they are just kind of shifting along now, the farmers as a whole throughout this country. We don't want to attack anybody. I have no personal campaign against the retailer getting 98 per cent, I don't know how many farmers would do the same thing if they could do it. But we ought to educate the public who are buying to the fact that there is a certain fair relation between what the farmer receives and what they should pay. The county and town fairs can help do that. I can tell you where to get the data if you want it. When you put upon the bulletins and when you make public the fact that the relation between the wholesale price of a certain product and the retail price should be, let us say, as forty is to fifty, and that is normal, and then you show what the wholesale price is now and show what the retail price is, then if the public finds it is as forty to eighty, or as forty to a hundred, they begin to talk; they will be getting educated. If the dealers are prospering they can't stand talk along that line very long. You will find prices beginning to tumble quite generally. When prices go down labor will be more willing to accept reductions, which means so much to the cost of everything.

I want to close with one more suggestion. If there is anything we need right now it is cool heads and it is good leadership. We want to have men in our towns and in our counties who are thoughtful, who are not excitable, who will get the facts, who will be kind and who will deal with their neighbor as they would like to be dealt with, who will present the situation to their neighbors correctly so they may talk it to the other neighbors and all may know. And when all know the facts as to this present situation, then the best remedy I know of—there are others—will be effective. And I repeat that our fairs have a wonderful part in this emergency. I thank you.

President Cameron: We will have to vary our program this morning as Secretary Corey received a wire from Mrs. Spaulding, who was to be on the program this morning, stating that she was sick and unable to be here. But we have with us today Hon. John Hammill, lieutenant governor, whom I take great pleasure in introducing to you gentlemen.

HON. JOHN HAMMILL

Mr. Chairman, ladies and gentlemen: I am sure I am pleased at this opportunity of talking briefly to you this morning. The secretary has suggested that I take up the question of the relationship that should exist between the county and district fairs and the state fair, and their cooperation, and the effect of that relationship upon the growth and development of the state.

The legislature at the last session took the view that the county, district and state fair were essential organizations in the state. They believed that the state fair depended upon the growth of the county and the district fair. In order that they might succeed the legislature aided in

a general way by appropriations, thus enabling your district and county fairs to grow.

I am a believer in the educational value of the county, district and state fair. I believe that the county and district fair have their place, scattered over the state and that there should be a proper relationship between these organizations and the state fair. They are builders, if you please, of a greater and a better state fair. Now to do this, to build a better state fair, we must have successful county and district fairs. The county and district fair bears the same relationship to the state fair as do our high schools to the colleges. They are feeders or developers of our state fair. We are all proud of this great state fair of Iowa. In fact we are proud of Iowa. As they have been discussing the condition of Iowa and of the nation, I want to say to you people that we have never passed that hat in Iowa and we are not going to do it this year or in any future year. I want you people to keep this thing in mind; that we have the richest soil in the world; that we have more wealth per capita than any other state in the union. Not only is that fact true but the egg crop of Iowa is worth more than the orange crop of the entire United States. We are first in the value of horses; we are second in the number of cattle, only being exceeded by Texas, having a territory much larger than Iowa. Now we have many distressing things, it is true, here in Iowa, but we can and we should meet this situation. There is, as Dr. Pearson stated, an over-production. He suggested that we should curtail production. I am sure we all agree with the President of our great agricultural college that this should be done. He also suggested one other remedy, that is the accumulation or taking off the market of certain corn, and there is just one thought in that connection I want to leave with you. That is this, I wonder whether that would result in very great relief for the reason that that visible supply would be ever present and affect your market condition. It seems to me, ladies and gentlemen, that we must first reduce production and then must try to find a market for this corn which will use it up. It seems to me that what we need today is not so much more financing as it is a marketing of our present over-production and present crop. Now the question naturally arises, in a sense, how can this be done? I know it is a difficult problem, it is one that is going to be hard to solve. We cannot loan money to the eastern countries and expect them to repay to us this money in buying of our food products, but we should, however, I believe, extend to all eastern countries a credit by which they may buy some of our farm products, thus extending credit for the purpose of expediting the purchase of our products rather than loaning money for any general purchases at this time.

Now people speak sometimes of the depressed condition of the country. True, it is not the best at the present time, but I want you people to keep in mind that the wealth of this country is 240 billion; that we owe, it is true, twenty-five billion, but we are owed by other countries nine billion dollars. This country is a long ways from being bankrupt at this time. What we need, as Dr. Pearson has said, is men with courage, men with backbone, who are going to go out and meet this situation and meet it squarely and honestly. The question is, how can these things be done?

To my notion, one of the greatest handicaps today is our freight charges and I want to say in this connection, and I am sure you men and women who are business men and women, will agree with this, that we cannot reduce freight rates, we cannot have adequate control and direction of our railroads as long as we have two organizations, one fixing the price of labor and the other fixing the freight rates, and going in opposite directions. There is need of placing together the responsibility as to this proposition and having one board having charge of this proposition rather than having one board having charge of one and the other having charge of the other. But we are not going to secure results along these lines unless something is done to bring this change about.

It is necessary today that we encourage, as Mr. Barney says, the dairy industry in Iowa. I want to congratulate the butter makers of Iowa upon securing this splendid banner for Iowa. I am sure we are all proud of the progress we have made in the dairy industry in Iowa. But if anything is needed today it is more cows, it is better cows and better care of our cows. As a matter of fact, we have in this state 1,400,000 cows, and the average production of a cow in Iowa is 140 pounds. Not only is that fact true but in Denmark it is 275, in Holland it is 300, in Wisconsin and New York 225 to 275. The facts are we are guessing at results too much. If we are going to farm this high priced land in Iowa we must not guess at results, we must know. There are too many cows on the Iowa farm today that are being kept there at a loss. Our agricultural college at Ames is doing a great work along these lines and I have always been imbued with the idea that as far as our expenditures were concerned, they were out of step in many respects with the teaching of the day and that care in the selection of our cows might result in better conditions. The Pennsylvania railroad keeps a record of every rail on its roadbed. They do not guess at results, they know. Now in this farm operation we must quit guessing at results, we must know. It is no longer a question of excuses, we are going to be called upon to deliver results. The question is how we are going to meet this situation. It can only be met by a better market, by a better farm system and I believe that insofar as the situation in Iowa is concerned our real remedy has got to be worked out by us individually. Our condition today is economic, not political. We have had too much credit in this state and in this nation in the past and the order of the day is liquidation and all that can be done in a sense in the general financial way is to pass us over this present situation as best we can expect to do and liquidate as we go on. That illustrates a situation that arose up in Eagle Grove a short time ago. One of the farmers there at Eagle Grove the other day went to the bank to borrow some money. He said he wanted to pay his taxes, he had a farm out there, and the question arose of giving security, and he said to the banker, "I am willing to give you security on my hogs, my cattle and crops, if you desire it, but I have got to have this money to pay my taxes. He didn't know whether he was going to get the banker to loan this money. He says, "What security do you want?" And the banker says, "I don't care anything about a mortgage on any of this property you have given me but I do want you to bring in the hind wheels of your automobile and leave them with me."

That has been part of the situation here in this state. It is true not only in the state but in the nation. We have been living too extravagantly. We have had limousine ideas, and, ladies and gentlemen, we have got to pay for them. That is our situation today. What is going to be the remedy? We must earn the right to exist by imitating our forefathers and living conservatively. They have set a wonderful example for us along these lines. We must be willing to return to these old fundamental principles that work is still ennobling and that success is self dependent and not dependent on others. We must, as I say, return to these fundamental principles. We also want to keep this fact in mind that we must start out in the world with the idea we are going to give exact justice, then we are going to be in a position to demand exact justice. Don't overlook the fact the American people know what exact justice is. Sooner or later they are going to demand it. Also keep this fact in mind, we are all going to go up or all going to go down together. No longer can we live and let live but we can live and help live. We have been living in the past in a condition in which thirty million people were engaged in war. What could we expect as a result of that condition. As Marshall Foch said the other day, it is more difficult to win peace than it is to win war. That is the condition we are confronted with today, and I believe that we should give each well behaved man or woman an equal responsibility, an equal opportunity and then require that they shall share an equal return in proportion to the obligations that have been placed upon them.

We also want to keep this fact in mind, that we should not lose faith in humanity. Losing faith in humanity is losing faith in our government and in the future of our country. Also keep this fact in mind, that God has given the power to the people to reason; He is not going to solve this problem, but He has given to our nation understanding to meet the supreme duty of the hour. I thank you.

President Cameron: That will complete our program this morning, and we will now stand adjourned until 1:30 this afternoon.

WEDNESDAY, DECEMBER 14, 1921, 1:30 P. M.

President Cameron: Gentlemen, you will please come to order. Is the Committee on Credentials ready to report?

Mr. F. E. Sheldon, Chairman: The report of the Committee is in the hands of Secretary Corey.

Secretary Corey: I will read the list of delegates that have turned in credentials as reported by the Credentials Committee.

REPORT OF COMMITTEE ON CREDENTIALS

We, your Committee on Credentials, report the following list of delegates entitled to vote at the State Agricultural Convention, December 14, 1921.

COUNTY AND DISTRICT FAIRS.

Adair.....	F. A. Gatch, Greenfield
Adams.....	C. T. Mercer, Corning
Allamakee.....	T. J. McDermott, Waukon

Audubon.....	R. D. Hawks, Audubon
Benton.....	Logan B. Urice, Vinton
Black Hawk.....	J. L. Bailey, Cedar Falls
Black Hawk—Waterloo.....	E. S. Estel, Waterloo
Boone.....	Harry Hephery, Ogden
Bremer.....	Joe P. Grawe, Waverly
Buchanan.....	E. Richardson, Aurora
Buchanan—Independence.....	E. A. Giles, Independence
Buchanan—Jesup.....	J. A. Miller, Jesup
Buena Vista.....	Roy H. Wilkinson, Alta
Butler.....	J. C. Carter, Allison
Calhoun—Manson.....	J. C. Hoag, Manson
Calhoun—Rockwell City.....	Andrew Stewart, Rockwell City
Carroll.....	C. H. Parsons, Carroll
Cass.....	Carl E. Hoffman, Atlantic
Cedar.....	C. F. Simmermaker, Tipton
Cerro Gordo.....	Chas. H. Barber, Mason City
Chickasaw.....	C. L. Putney, Nashua
Clay.....	L. W. Emery, Spencer
Clayton—Elkader.....	C. A. Benson, Elkader
Clayton—Strawberry Point.....	G. W. Barr, Strawberry Point
Clayton—National.....	A. J. Kregel, Garnaville
Clinton.....	G. H. Christensen, DeWitt
Crawford.....	C. P. Harvey, Denison
Dallas.....	H. C. Modlin, Perry
Davis.....	Frank C. Young, Bloomfield
Decatur.....	C. M. Akes, Leon
Delaware.....	E. W. Williams, Manchester
Des Moines.....	Frank C. Norton, Burlington
Dickinson.....	J. E. Merrill, Spirit Lake
Dubuque.....	N. G. Malin, Dyersville
Fayette.....	H. M. Stafford, West Union
Fremont.....	J. S. Athen, Hamburg
Greene.....	E. C. Freeman, Jefferson
Grundy.....	A. G. Briggs, Grundy Center
Guthrie.....	H. A. Covault, Guthrie Center
Hamilton.....	A. E. Bryan, Webster City
Hancock.....	O. L. Senneff, Britt
Hardin.....	W. H. Rowen, Union
Harrison.....	J. E. Jones, Missouri Valley
Henry.....	F. B. Montgomery, Mt. Pleasant
Henry—Winfield.....	Russell Canby, Winfield
Humboldt.....	C. Skow, Humboldt
Ida.....	Frank R. Kerrigan, Ida Grove
Jackson.....	E. A. Phillips, Maquoketa
Jasper.....	E. J. Failor, Newton
Jefferson.....	Chas. H. Ross, Fairfield
Jones—Anamosa.....	W. E. Daly, Anamosa
Jones—Monticello.....	H. M. Carlsen, Monticello
Keokuk.....	A. L. Humes, ———
Kossuth.....	S. D. Quarton, Algona
Lee.....	E. C. Lynn, Donnellson
Lee—West Point.....	Theodore Vonderhaar, West Point
Linn—Central City.....	C. E. Butters, Central City
Linn—Marion.....	E. E. Parsons, Marion
Louisa.....	R. S. Johnston, Columbus City
Lucas.....	H. E. Thorne, Derby
Lyon.....	W. G. Smith, Rock Rapids
Mahaska.....	Roy E. Rowland, Oskaloosa
Marion.....	C. M. Gilson, Knoxville
Marshall.....	F. C. Davis, Albion
Marshall.....	E. A. Fricke, Marshalltown

Mills.....	G. H. White, Malvern
Mitchell.....	John McNulty, Osage
Monona.....	N. W. McBeath, Whiting
Monroe.....	F. A. Wilkinson, Albia
Muscatine.....	W. H. Shipman, West Liberty
O'Brien.....	H. E. Benson, Sheldon
Page—Clarinda.....	J. C. Beckner, Clarinda
Page—Shenandoah.....	H. H. Hatcher, Shenandoah
Pocahontas.....	Edward J. Mullen, Fonda
Pottawattamie.....	W. W. Wiese, Avoca
Poweshiek.....	R. O. Heatwole, Brooklyn
Sac.....	W. F. Weary, Sac City
Scott.....	M. E. Bacon, Davenport
Shelby.....	W. E. Cooper, Harlan
Sioux.....	Dr. H. T. VandeWaa, Orange City
Story.....	Robt. J. Shanahan, Ames
Tama.....	B. R. Emerson, Toledo
Taylor.....	B. J. Flick, Bedford
Van Buren.....	R. C. Hoskins, Milton
Warren.....	J. Fred Henry, Indianola
Wayne.....	John Krouse, Corydon
Webster.....	H. S. Stanbery, Fort Dodge
Winnebago.....	R. E. Hanson, Forest City
Winneshiek.....	H. J. Green, Decorah
Woodbury.....	Don V. Moore, Sioux City
Worth.....	N. T. Christianson, Northwood
Wright.....	W. C. Ramsay, Belmond

FARMERS' INSTITUTES

Black Hawk.....	G. F. Johnson, Hudson
Franklin.....	W. H. Thompson, Geneva
Johnson.....	L. R. Morford, Iowa City
Page.....	E. G. Strong, Clarinda
Polk.....	James H. Deemer, Des Moines
Story.....	Elmer Reed, Ames
Warren.....	T. Bonar McKee, Carlisle

COUNTIES IN WHICH NO FAIRS ARE HELD

Cherokee.....	W. P. Dawson, Aurelia
Franklin.....	T. W. Purcell, Hampton
Madison.....	T. J. Hudson, Winterset
Polk.....	J. A. Backman, Des Moines
Union.....	Ira A. Griff, Afton
Wapello.....	Milo Reno, Agency

ASSOCIATIONS ENTITLED TO REPRESENTATION

State Horticultural Society.....	H. L. Merkel, Des Moines
Iowa State Dairy Association.....	J. P. Eves, Waterloo

STATE BOARD OF AGRICULTURE

Ex-Officio Members

Governor.....	N. E. Kendall
Pres. State College of Agriculture & Mechanic Arts.....	R. A. Pearson, Ames
State Veterinarian.....	Dr. Peter Malcolm
State Food and Dairy Commissioner.....	W. B. Barney

Officers

President.....	C. E. Cameron, Alta
Vice President.....	J. P. Mullen, Fonda
Secretary.....	A. R. Corey, Des Moines
Treasurer.....	W. W. Morrow, Afton

District Members

First District.....	H. O. Weaver, Wapello
Second District.....	E. T. Davis, Iowa City
Third District.....	E. M. Reeves, Waverly
Fourth District.....	E. J. Curtin, Decorah
Fifth District.....	C. A. Tow, Norway
Sixth District.....	T. C. Legoe, What Cheer
Seventh District.....	C. F. Curtiss, Ames
Eighth District.....	F. E. Sheldon, Mt. Ayr
Ninth District.....	
Tenth District.....	Sears McHenry, Denison
Eleventh District.....	H. L. Pike, Whiting

F. E. SHELTON,
H. S. STANBURY,
ROY E. ROWLAND,

Committee on Credentials.

President Cameron: You have heard the report of the Committee on Credentials. What will you do with it?

It was moved and seconded that the report be adopted and the Committee be continued, to add the names of delegates that may come in.

The motion was put and carried.

President Cameron: We will now listen to the report of the Committee on Resolutions.

Mr. W. G. Smith, Chairman: The report of the Committee on Resolutions is very brief and is as follows:

We desire to congratulate the management, the officers and the directors of the Iowa State Fair on their success, and we hereby extend to the said officers and directors of the Iowa State Fair our sincere appreciation and thanks for the loyal and efficient services rendered the people of the great State of Iowa, and tender to them our hearty co-operation in the holding of future fairs. In view of the fact of the sentiment expressed that the coming year will continue to be a crucial test for all fairs, owing to the reduced values of agricultural products, we pledge to the State Fair Board our unqualified support and co-operation, that the 1922 fair may keep pace with the fairs of the past.

We especially desire to commend the efficient and worthy service of the Executive Management of the fair board, and more particularly our Secretary A. R. Corey, and his very efficient assistants, for their painstaking and earnest efforts in the up-building of the state fair, and for the courteous consideration shown to the various county and district organizations throughout the state.

That inasmuch as the attendance and importance of the annual meeting of the Fair Managers Association has grown in the past few years, and for the reason that many valuable addresses are delivered at the meetings held in connection with the State Agricultural convention, we recommend

that proceedings of these meetings be printed at the close of the convention and be distributed to the members.

W. G. SMITH,
S. J. JOHNSTON,
S. D. QUARTON, Committee.

The resolutions were adopted as read.

President Cameron: Gentlemen, I don't think you need any introduction to the next speaker. Iowa is proud of him. We have the honor of presenting to you the head of the great Farm Bureau of the United States, Mr. John R. Howard.

President Howard of the American Farm Bureau: Mr. Chairman and gentlemen, I certainly am very glad to be back home again today and to renew your acquaintances. I have been more or less rambling in a pretty big field for the last two or three years. It has been an uncharted field. It has been indeed a time of very great trouble and perplexity and hence it has been harder to chart a course and hold true to it than would have been true under normal conditions.

If I were to tell you what I think has been the great function of the American Farm Bureau, and I am speaking from the national viewpoint today in the main rather than the state viewpoint, I would say that it has been to burn the importance of agriculture into the consciousness of all classes of this nation, and I assure you that is a job which is sorely needed to be done because there are great numbers of our population and great classes of American industry who do not stop to realize that the farm is the basis of all our national prosperity. We have been telling these people that their cities and railroads and financial institutions have all come from the soil of America, they are from the farms or the mines or the forests and that which did not come directly from the farms came indirectly from the farms. And all these cities and industrial institutions have been built out of the margins between the farmers' or producers' costs and the consumers' prices. We have been telling to them the story that American agriculture is entering a new era, that the great vast expanse of western lands which were available when most of us were boys are now all under cultivation; that area expansion of agriculture is no longer possible to any great extent, that our food supplies must come from the lands now in tilling and that these things all demand the careful thought not only of the farmer but the business man as well.

It was a little more than a year ago that I met a representative of eastern industry on a train. He had been on some mission to South America. He had served an apprenticeship for a number of years as secretary for a millionaire eastern United States senator. I was telling him of some of Iowa farm problems and that it was necessary to have a better agriculture than we had previously had, that it was necessary in order to keep the best feeling on the farms of America that the farmer have better prices for his products than had before prevailed; that it was necessary for the welfare of unborn generations that the fertility of this soil of ours be maintained and not depleted. I remember well how he turned to me and

said, "There is no agricultural problem in America." He said, "America was not destined to be a great agricultural nation, it is destined to be the greatest manufacturing and commercial nation the world has ever known and not until your soil of the Mississippi valley and the soil of the great South American empire is reduced to the same degree of depleted fertility as the soil of the New England states will there ever be an agricultural problem in America." Now that is an extreme statement, of course. Very few people go to that length but it does voice to some degree the sentiment which a great mass of the population feel towards the farmer. They consider that our function is to produce, produce largely and more largely regardless of profit. I am not sure but what there are some reasons why they should feel that way. As a nation we have had a policy for a number of years of getting our new lands settled. A great deal of our government revenue has come from the sale of these lands and the government through its homesteading policy has promoted agricultural production and the competition of the new lands has virtually put many of the older agricultural sections out of the running so far as profit is concerned. But of course that is past.

The railroads have had much to do with the development of our agriculture. With large government subsidies they have gone into new territories to develop tonnage, for transportation always must precede the tonnage. So I say that it is necessary that the nation as a whole realize that we must act, that they must and we all must give a careful consideration to the problems which affect us all.

Just at this time we are overburdened with surpluses of some of our crops, particularly corn. You people know as well as I that we would be better off if we had less corn and more money and if we had less corn we would have more money. The fact is we have 670 million bushels more corn in America today than has been used in an average year of the past ten years and 670 million bushels is one-fourth the normal corn crop of the United States. If you take the year of the greatest consumption of corn, which was last year, we still have 370 million bushels more than disappeared from the farms of America last year. And by disappearance I mean that it was fed to live stock or that it was marketed. So we do have a serious problem.

Now I want to give you another little picture of the attitude of some people toward this corn crop of ours. Russia is starving. Millions and millions of people must perish unless relief soon comes. Our relief associations have sent good and reliable men over there to canvass the situation. They came back with the recommendation that corn should be sent to those starving Russians; that every community in Russia has its mill and can take care of this corn and they addressed the President to ask that Congress make an appropriation to buy 20 million bushels of these 670 million bushels of surplus to send to Russia. The President recommended in his message the purchase of 10 million bushels. A bill was introduced into Congress. I am just back from Washington and I want to tell you that there is every possible effort being made by the New England bloc in the House of Representatives to defeat that appropriation. I don't think they are going to defeat it, but they don't want the govern-

ment to handle this corn. They don't object to the appropriation but these people want to handle the funds. They want this corn to go through regular marketing agencies and reap a profit from it. At least that is the only explanation of their attitude.

Now just a word about relief agencies and about the possibility of expanding the corn market. A year ago the American Relief Association through Mr. Hoover had planned to put on a campaign and solicit corn from the farms of Iowa and other states for the relief of central Europe. The plan was to sell this corn on the markets of this country and to take the proceeds and invest it in food supplies and other goods. The American Farm Bureau Federation took this matter up with Mr. Hoover and after some negotiations he changed his plans. We convinced him that corn is a good food, that even it won't hurt children to eat corn products. We convinced him that the products of our corn mills would be desirable and that the American farmer did not want to give corn, and it was unfair to ask him to give corn to further depress the markets of this country. What we wanted was to get the corn out of the country. He finally consented to that and through our organizations collected about 700,000 bushels of corn. This corn was processed in the mills of this country by American labor, the by-products sold and the proceeds put into other corn. A record was kept of every bushel of that corn from the time it left the station until it was loaded on the ship. We had a selfish motive in that as well as a humanitarian motive, and the selfish motive was the advertisement of corn as a food product.

I wonder if we have gotten any results? I want to assure you that we have, although it is not yet six months since the last of these shipments reached Europe. I cannot tell you how much the results are but I can tell you that as a direct result of that gift corn one single nation which received less than one-third of the shipment of corn has placed a single order for 8,900 tons of American corn products and they tell us that many, many other orders are coming because that corn proved a most satisfactory food in their time of need. As an interesting sidelight we required that as many of the different products manufactured from corn as possible be included, so a considerable quantity of corn oil was sent over. They said, "We can't use that corn oil, we don't know what to do with it." But when they got it over there they found they had a large number of Jewish people who were suffering who could not use our animal fats because of their ecclesiastical requirements. They distributed that corn oil to these people. It met their every ecclesiastical requirement and was absolutely satisfactory and as a result a number of orders for corn oil for use amongst these people in Europe have been received in this country. So with regard to Russian relief it is another opportunity not only to relieve humanity but to open up new markets for our great American cereal.

I really think this corn situation deserves a most careful study at this time. Not only do we have this large surplus but in the past two years, or from January 1, 1919, to January 1, 1921, there was a decrease of 1,299,000 horses in this country. That decrease was largely in the towns and cities. A working horse will eat three tons of corn and three tons of

hay every year. If you will figure a little you will see why we have a part of this surplus. They have been replaced, of course, by gasoline. I am satisfied in my own mind as much as I ever was satisfied of anything that the horse is coming back, is going to stay on the farms of America, we can't get along without it. It is our cheapest power, our most reliable power and the horse is coming back to some extent on the streets of the cities of this country, and you men who are interested in the horse business let me tell you, don't lose your faith in the horse. While our horses have been decreased our cattle also have decreased to the extent of more than two million head. Nearly four million head of sheep have disappeared and we have almost eight million less hogs than we had two years ago.

It is too bad for the sake of the Iowa farmer, it is too bad for the sake of the maintenance of the soil fertility of this great state that meat consumption in United States has materially decreased. I think it should be increased. I think it will be increased. It is one of our problems as Iowa farmers to encourage the increase of meat consumption. A number of things have entered into its decrease, but perhaps more than any other one factor has been the high price of meat in the retail markets of the country. If you would ask me to analyze and name to you the three things which are most hurting American agriculture today I would name the credit situation, transportation and the high price of retail goods in the country. A situation which will make for five cent hides and ten dollar shoes will wreck the country, and seven or eight cent cattle or six or seven cent cattle and forty cent beef steak cannot continue. But that is exactly what we are up against. It affects consumption most materially. It enters into the railroad problem.

The problem of the railroads in order to enable them to reduce freight rates is one of reduction in labor costs and the laboring man must live, he must buy clothing, he must buy shoes, he must buy bread and he must buy meat and he gets it on the retail market of the country. Now I am aware that many of our country merchants are just as hard pressed as we farmers are. I am not speaking of them. I am speaking of the conditions which prevail in the cities of this country where the bulk of our labor lives and the wage schedules of which dominate the country. And I tell you candidly that the laboring man who must work in the city and work on the section or in a shop or on a train cannot maintain a decent standard of living at very much less wage than he is now getting. He possibly can take some reduction. But if this spread between the producer and consumer were narrowed, then he could because wages should not properly be measured by dollars and cents so much as they should be measured in commodities which the day's wage will enable the laborer to buy.

Now about railroad rates and wages. That laborer who lives in the city draws just the same per diem if he is a track man or right of way man, and that is where a great deal of railroad labor is used. He draws the same per diem as the Greek or Italian or Mexican who lives in a box car along the railroad track, who would not live in a decent house if he had it and who sends every dollar of his wages out of this country just as fast as he earns it. If I were to make any suggestions requiring changes in our

transportation law it would be to say to you that the whole wage system needs revision; that the railroad should be given a right to go on the labor markets of this country and buy its labor as any other industry buys it. This it cannot do because of the restrictions of the Railroad Labor Board. The public has been deprived of a hearing before the Railroad Labor Board.

Not only has the American Farm Bureau Federation asked to appear on behalf of the farmers of this country but the national industrial traffic league has asked that same permission and the National Manufacturers Association has asked the permission. All have been denied the privilege of speaking for the public of this country with regard to this important item which affects our transportation. I don't believe the spirit of this country or the thought of the people would ever permit us to go back to a system that did not provide some board to stand between the railroad employee and the railroad in defense of the general public. And I do say to you that one governmental body in Washington which regulates every cent of the income of the railroads and another governmental body or commission in Chicago which regulates sixty per cent of the expenditure of that income cannot function in the interests of the whole people. I have this in mind myself, it is my own individual thought, that the transportation act should be so amended that the labor board should be done away with as it now exists; its functions should be transferred to the Interstate Commerce Commission which already exists. That Interstate Commerce Commission as a whole or in part or by additions to its membership should serve as a body to consider the evidence in case of an imminent strike between the employer and employee and only then as it affects train service, for that is about the only thing that concerns us as the general public; that is a strike of right of way men would not result in general starving on the part of the people of America. That this board in these cases should make a thorough investigation, should give the public their information and that it should be a high crime for any strike to be declared until that information is in the hands of the public.

I think that would go a long way towards a satisfactory settlement of this important transportation item, since really this transportation question is so big that nobody, I think, comprehends it. I am only giving you a general conclusion. When some radical or half-informed fellow gets to talking the railroad question the probability is that he has not investigated the things which he is talking about. When anyone discounts the information obtained by the Interstate Commerce Commission he is going against the only reliable source of information in this country. If their information be accurate it is my impression that we are headed very soon directly into government ownership of the railroads or we are headed towards a policy which will remove some of the restrictions of the commissions now regulating railroads. You know that no Board of Railroad Directors can control more than five per cent of the income of the railroads at this time. They are that nearly governmentally controlled. They must either be given more personal initiative to work out their own conditions, and that of course under a proper curb of government authority, or they must come into the hands of the government. I really be-

lieve one of these two things will happen soon. Personally I have had enough of government ownership and government operation of the railroad. I don't know whether you know it or not but the government has already paid out to the railroads an expense account of 1,800,000,000 dollars as a result of the experiment and they are not through yet. They owe the railroads at least another quarter of a billion of dollars before the governmental obligation is settled.

Just a word or two more now with regard to the present condition which confronts us. It is not an Iowa condition or a United States condition. It is a world condition. I took luncheon the other day with the agricultural attaches of three foreign countries and they told me that in their countries pretty much the same problems are being met which affect us here. It was inevitable that there be some reaction from the very strong currents of action which took place during the war. I have no doubt that a great deal of the trouble is directly attributable to deflation. I read recently the opinion of some eminent man when the Federal Reserve Bank's Act was enacted which said there was tremendous danger in the act because it was an inflation act and inflation must always be followed by deflation, and we certainly got the deflation. We got it too fast and too hard. There is no doubt that it was shot first at agriculture, you can't put your finger on the passage but I feel it was a deliberate intent to strike agriculture first, that is my own conviction, and it certainly succeeded. Now with regard to our prices, other industries are rapidly following the farmer on his downward course and they are coming down just as far as we went down before they are through with it unless our prices rapidly react. I think you will agree with me that it would be better if the farmers' prices could come up to the level of other prices rather than their prices be brought down to our level.

The figures of the Bureau of Labor for the month of October which are the most reliable statistics which the government has, states that the all-commodity price level or index,—and by all commodity, they keep lists of daily fluctuations of such things as steel and clothing and shoes and household furnishings and all these things, a long list of them as well as farm prices—these commodities stood at 150 points counting 100 points the average of 1913 which was the last full year before the war. Agricultural commodities stood at 119 points and that was not our farm price of agricultural commodities, that was the wholesale price or terminal price. Now if you subtract out of all commodities farm products and reduce out of the farm products, reduce the price to the farm price for these products you will find that our exchange is only sixty-five per cent as much as it was before the war. That is, a bushel of our corn or our wheat or a hundred pounds of our pork will only buy two-thirds as much of the necessary things of life as a bushel of wheat or a bushel of corn or a hundred pounds of pork would buy in 1913. Now that is the exchange rate, let's call it the domestic exchange rate, if you please. It is the exchange rate in this country between the agricultural commodities and other commodities. They talk a good deal about foreign exchange and the effect of foreign exchange upon prices and conditions. If you reduce our domestic exchange as represented by the farmers' buying power to terms of English

money, which has been called the world's standard, it would reduce that English pound to \$3.16 which is six points lower than the international exchange between this country and England ever reached and more than 100 points lower than it is today.

There are some things which I might mention, namely that this all commodity price has continued practically level for the last six months which would indicate that we are reaching something like a stable basis which when all of our adjustments are made will be about fifty per cent higher than the prices of 1913. We don't know that but that is the indication.

A great deal of discussion has taken place regarding future prices, regarding Iowa land values, for instance, and whether Iowa land is too high or not. I mention this for your thought and with that let me say that in the past ten years the amount of money in this country has increased ninety-six per cent and it is supposed that the amount of money reflects prices. The amount of bank credit in the same ten years increased 144 per cent and many people say that bank credit has displaced the quantitative theory of money. So that either on the basis of bank credit or per capita circulation of money, prices will be very materially higher when adjustments are made. It is interesting to note that in connection with land values the total valuation of the farms in the United States from 1910 to 1920 increased exactly the same percentage as our total monetary circulation increased. So that I have not lost faith in the value of my Iowa farm and I am not going to lose faith in it. I consider it the best property, the best investment in America today. I have every confidence that sooner or later, I hope sooner, although it may be later than we want, these adjustments are going to be settled. I have reason to be confident because I know that this human family of ours has got to eat and I know the feeding of a hundred million people is a big contract and I know this state of ours is the greatest garden spot in America and in the world and I know that finally American agriculture is going to come into its own not as an agriculture controlled by peasantry but an agriculture in the hands of an enlightened and intelligent and educated citizenship.

President Cameron: Here is a gentleman who needs no introduction, our governor.

Governor N. E. Kendall: Mr. President: I very much regret that I have been so occupied the past two days with duties that I could not postpone that it has not been possible for me to attend any of the meetings until now. I am not an interloper here; I am an ex-officio member of the Board of Agriculture in Iowa, and I deem it one of the pleasant incidents connected with the office that I occupy. I for a long time took very great pride indeed in the State Fair of Iowa, and as I see its exposition each recurring year I am inspired with even greater satisfaction in what is being done; and each of the county exhibitions that are held everywhere. They are real educational enterprises to instruct as well as amuse and edify the people.

I wish I might have heard the address to which you have just listened here. It is not possible for me now to confront a gathering of men inter-

ested in agriculture without reflecting somewhat upon the conditions which prevail in that business. And agriculture is a business, a manufacturing business, if you please, and entitled to the same consideration that ought to attach to any other business or industrial enterprise. We have a great state here, an area I suppose that is unequalled anywhere in the world for productiveness. Our soil is generous in the returns it makes to our labor and we have always an abundance of those things which are necessary to the comfort and happiness of the people.

We have fallen upon perilous times in agriculture. We were to blame for part of it ourselves. While the war was in progress everybody, farmers and all, became intoxicated with the insanity of extravagance. We lost all our bearings, all our notions of economy and prudence and frugality. If a farmer living in the country had a Ford car which answered every function of his family and his neighbor bought a Cadillac, and the wife of the first farmer said, "I don't intend to ride around in this old rattle-trap when that neighbor of mine enjoys that handsome limousine." Well, the farmer went down to the bank—hogs were \$20 a hundred, corn \$1.85 a bushel,—and he made an exchange of his serviceable Ford for a Cadillac and the banker kindly loaned him the difference with which to make the transaction. Prices were as I said at that time, and after a while the note matured, as all obligations have an unhappy faculty of doing, generally at the most inopportune time, so when the time came for this good man and his good wife to pay, corn had dropped to forty-five cents and pork to \$7.50 a hundred. The case I have stated is typical of what transpired all over Iowa. It is not confined to farmers but to every element of our society and the consequence is we have discovered ourselves fallen upon times when men who heretofore have been regarded as entirely solvent now find extreme difficulty in commanding money to defray their ordinary and regular expenses.

What is to be done? That is the question that is engaging the attention of every man who is now interested in our situation, because there can be no permanent or acceptable prosperity in Iowa until the men who produce food commodities can market them on a profitable margin. Our agriculture is the basis and bottom of all our industrial activity of every description. What can be done? We have lately had another agency added to the financial machinery which has been installed to relieve the situation. The War Finance Board—to start with I want to say that I believe the bankers of Iowa have exhausted every resource possible to relieve the situation as it has existed in our state. In my opinion they have performed as patriotic a service in this emergency as they did during the great world's war. But the truth is that all our reservoirs of credit were exhausted and the banks of our state were not able to take care of the vast mass of indebtedness which was maturing day after day. The government has placed at the disposal of the farmers of the country a billion dollars, and if that money could go direct from the government to the farmer there would be very great relief, but I am persuaded to believe with the restrictions which have been imposed will render impossible the relief of a great many farmers of this state who otherwise might accept of it. I wish we had had the judgment in Iowa to embark

upon the program adopted in the state of South Dakota. You know what their rural credits plan there is. They amended their constitution providing that the state should borrow money on bonds at five per cent interest and reloan that direct to the farmers on long time paper at six per cent, and now they have loaned in that state nearly sixty millions of dollars directly made by the state to the farmer himself without any intervening agency that has the effect of absorbing in some measure the relief that ought to go direct to the farmer. When Governor McMasters was here a couple of months ago at the conference that was held of executives of this section of the country he told me that out of eight thousand loans which are now in effect in South Dakota at the end of the fiscal year June 30, 1921, only two borrowers had defaulted in principal and interest. We have got in this state to come, in my opinion, to the adoption of some such resource as that for direct immediate relief to the men who make our prosperity possible. I think that is one thing we can do in the future.

The immediate necessity for us is the radical reduction of freight rates in this whole Mississippi valley. We have fallen into the obsession, which is a fallacious one to apply, no matter how prosperous agriculture is, no matter how stagnant business is, no matter how perilous manufacturing is, no matter how universal unemployment is, the railroads are to be guaranteed a fixed return upon their capital. We must get away from that idea because it is an economic fallacy. The railroad companies are entitled to a fair return but that fair return is to be measured by the conditions that prevail in all other lines of industry throughout the country. If our farmers were prosperous during the war look at the prices they received. While the prices of farm products during the war measured by money were high, but measured by the things that the farmer had to buy with what he produced they were not relatively high. What would be said if they said now every farmer in the Mississippi valley shall be insured a certain return upon his property investment; the very proposition itself would fall to the ground of its own absurdity. But I insist that the same valuation which attaches to the farm should be applied to the railroad and it should receive a fair return considering the conditions of business which exist in the country at large. Don't get the idea that the railroads cannot afford to make a reduction in freight rates. I undertake to say that no man can examine returns that have been filed by them for the month ending October and not be entirely convinced that they can stand a reduction of twenty-five per cent, every trunk line that operates in Iowa and still earn a return equal to that provided for the standard railroad under the transportation act. I hope this convention here, I do not mean by formal resolution, but I hope you may go away from here determined to let the men at Washington know your feelings on this important subject. These men are down there thirteen hundred miles away from Iowa. The environments are different there, the surroundings are altogether different. There is a different atmosphere in Washington to that which prevails in Iowa. You go down there and remain a month and you will be glad to escape the miasma of that atmosphere and breathe again the pure ozone of the Iowa prairies. Keep in close touch with the men you have elected congressmen, that you have elected to official posi-

tions in the state and you will have the best government. The best government is that government where every eye in the state is fastened squarely upon every one of its public servants. I wonder how many of you men have written to your congressman lately in regard to your view on any subject. One. We ought to have more interest in public affairs than is manifested in this assembly here this afternoon. You are representative men of the great agricultural interests of the state of Iowa and you ought to keep in constant communication with the men whose legislation either makes profitable or disastrous the result of your enterprise. They will welcome it. Any public servant who wants to do his duty, and I think they all do, will be glad to hear from the men to whom he is responsible for his public conduct. Write to them. Let us bring some pressure to bear and see if we can get a reduction of freight rates in the Mississippi valley. I wrote to Senator Kenyon, who is a very active man in the interest of the Iowa farmer. I wrote to him and told him we would have to have new freight rates or go into bankruptcy. He wrote back and said the Interstate Commerce Commission would not give us new freight rates. Then I said to him in that event we ought to have a new Interstate Commerce Commission. We have come to that place right now in this country. We want a commission there that will be responsive to public opinion and the demand of the people in the Mississippi valley.

President Cameron: I think that completes our program for this afternoon. The next order of business will be the election of officers and members of the State Board of Agriculture.

Vice President Mullen: We will now proceed to the election of the president of the State Board of Agriculture for the coming year. What is your pleasure.

L. W. Emery of Clay county: Mr. Vice President, Northwestern Iowa once again wishes to present the name that needs no introduction, Mr. C. E. Cameron of Alta, Iowa.

C. P. Harvey of Crawford county seconded the nomination. R. J. Shanahan of Story county then moved that the nominations be closed, the rules suspended, and that the secretary be instructed to cast the entire ballot of the Society for Mr. Cameron for president. Motion was seconded and carried and the secretary announced that he so cast the entire vote of the convention for Mr. Cameron. The vice president declared Mr. Cameron duly elected as president to succeed himself for the ensuing year.

President Cameron: Gentlemen, you do not know how much I appreciate this honor and especially at this time. I want to say to you men, in behalf of the Department of Agriculture, if there is anything that the State Board of Agriculture can do for you people to make your fairs a success do not hesitate to call upon us. I thank you, gentlemen.

The next will be the election of vice president.

H. S. Stanberry of Webster county: I desire to place in nomination our mutual friend, Mr. John P. Mullen.

The motion was duly seconded by R. H. Wilkinson of Buena Vista county. There being no other nominations, R. J. Shanahan of Story county moved that the rules be suspended and that the secretary be instructed to cast the unanimous ballot of the convention for Mr. Mullen for vice president. The motion was seconded and the secretary thereupon cast the vote of the entire convention for Mr. Mullen and the president declared Mr. Mullen duly elected vice president of the State Board of Agriculture for the ensuing year.

J. P. Mullen: Gentlemen, for this renewed confidence of yours in my work I sincerely thank you, and I hope to repay you by equal, if not greater efforts in the future for the success of the Iowa State Fair. I thank you again.

President Cameron: As you no doubt all know there is an election of directors, in odd numbered district one year and in even numbered the next. This year it is the odd numbers, commencing with the First District.

R. S. Johnston of Louisa county: I would like to place in nomination Mr. H. O. Weaver of Wapello as director from the First District to succeed himself.

President Cameron: Are there any further nominations?

There being no further nominations, Mr. Johnston moved that the rules be suspended and that the secretary be instructed to cast the entire vote of the convention for Mr. Weaver. The motion was seconded and carried and the secretary announced that he had so cast the vote of the convention for Mr. Weaver, and the president declared Mr. Weaver elected to succeed himself as director from the First District.

President Cameron: We will now receive nominations for director to represent the Third District.

E. S. Estel of Black Hawk county: I desire to place in nomination for the Third District a farmer and fair secretary and a pure-bred breeder of dairy cattle and hogs. The man I have in mind has the full confidence of the dairymen of the state. The dairy industry, I believe, as was told you this morning, represents a very large part of the agricultural interests. It represents in value \$152,000,000. The man whom I have in mind, I believe, will be the first direct rep-

representative of the dairy industry on our State Agricultural Board. He is a man who has exhibited cattle widely at state fairs, has succeeded, and has absorbed from his experience valuable information that would help him as a member of the Board. As I said he is a farmer, I place in nomination Mr. W. J. Campbell of Jesup.

E. T. Davis of Johnson county: I place in nomination Mr. E. M. Reeves of Bremer County to succeed himself.

W. P. Dawson of Cherokee: I have in mind a man for this place who will represent not only agriculture, but the great division of agriculture known as horticulture. On the list of members of this Board you have almost every industry well represented either by special men or by men who are generally interested in these things, and we find that most of the other industries of the state are pretty well developed while horticulture has been overlooked largely and has really not been making any progress. I have in mind a man who is president of the State Nurseryman's Association, member of the affiliated societies of the State Horticultural Society, a man who has made a success of his own business, understanding not only horticulture but agriculture, a constructive farmer and nurseryman, Mr. Earl Ferris.

C. H. Barber of Cerro Gordo county: In behalf of North Central Iowa I would like to second the nomination of Mr. Ferris. He is a neighbor of mine, just the county below, and a man I know to be entirely fitted for this position.

President Cameron: Are there any further nominations. If not, the nominations are closed. I will appoint as tellers Mr. Barber, Mr. Lynn, Mr. McBeath and Mr. Bacon. The secretary will call the roll.

The result of the ballot was announced as follows: Reeves, 9; Campbell, 26; Ferris, 75. Mr. Reeves moved that the election be made unanimous. This motion was seconded and carried. Mr. Cameron then declared Mr. Earl Ferris elected director from the Third District.

President Cameron: Nominations for director from the Fifth District are now in order.

Logan B. Urice of Benton county: I wish to place in nomination the best man in the state, from the best town in the state, in the best county in the state, Mr. Cyrus A. Tow, to succeed himself.

Mr. Simmermaker of Cedar county seconded the nomination, and moved that the nominations be closed, the rules suspended and the

secretary instructed to cast the vote of the convention for Mr. Tow. The motion prevailed and the secretary announced that he so cast the entire vote of the convention for Mr. Tow. The president therefore declared Mr. Tow elected as director from the Fifth District to succeed himself.

President Cameron: The next will be the election of director from the Seventh District.

R. J. Shanahan of Story county: I take pleasure in presenting the name of C. F. Curtiss of Ames, to succeed himself.

President Cameron: Are there any other nominations. If not, the usual motion will be in order. It was moved and seconded that the nominations close and that the secretary cast the vote of the convention for Mr. Curtiss. The motion prevailed and the secretary so cast the vote of the convention for Mr. Curtiss, and President Cameron declared Mr. Curtiss elected director from the Seventh District to succeed himself.

President Cameron: The next will be the election of director from the Ninth District.

C. H. Tribby of Henry County: I want to place in nomination a man who has been a successful farmer and fine stock breeder, Mr. George White of Malvern, Iowa.

Nomination seconded by L. G. Stone of Page county.

R. D. Hawks of Audubon county: Audubon county places in nomination Carl E. Hoffman of Cass county.

M. E. Bacon of Scott county: I would like to second the nomination of a man who has been secretary of one of the good, big, county fairs of the state of Iowa, a man who has been a successful business man. I want to second the nomination of Carl E. Hoffman.

President Cameron: If there are no further nominations, the nominations will be closed. The same tellers will act as before. The secretary will call the roll.

The result of the ballot was announced as follows: Hoffman, 70; White, 34. Mr. White moved that the rules be suspended and that the secretary be instructed to cast the entire vote of the convention for Mr. Hoffman, and he also extended Mr. Hoffman his congratulations.

President Cameron: Mr. White moves that the election be declared unanimous. Those in favor of the motion signify by saying aye. Contrary no.

The motion prevailed, and Mr. Cameron declared Mr. Hoffman unanimously elected director from the Ninth District.

President Cameron: The next is the election of director from the Eleventh District.

N. W. McBeath of Monona county: I would like to place in nomination for member of the Board from the Eleventh District, Mr. H. L. Pike of Monona county.

The motion was seconded by Mr. Mullen, and Mr. McBeath then moved that the rules be suspended, the nominations closed, and the secretary instructed to cast the vote of the convention for Mr. Pike. Motion was seconded and prevailed, and the secretary announced that he had so cast the vote of the entire convention for Mr. Pike. President Cameron declared Mr. Pike elected director from the Eleventh District for the ensuing two years.

President Cameron: Is there any unfinished business?

T. W. Purcell of Franklin county: If there is no other business I move we adjourn.

Motion was seconded and carried.

PART III

Fourteenth Annual Convention of the Iowa Fair Managers' Association.

The meeting was called to order at ten o'clock by President Carl E. Hoffman. The roll was called and the secretary instructed to read the names of committee members.

Secretary Bacon: The first committee is the Credentials Committee: W. S. Weary, C. H. Tribby and H. S. Stanbery.

Resolutions Committee: Chas. Barber, E. A. Giles and R. D. Hawks.

President Hoffman: The next on the program is the secretary's report.

The secretary read a brief report of the 1920 annual meeting which will be found in full in the 1920 Year Book of Agriculture. He also reported as follows on legislative work:

"At this time I want to make a short report of the efforts of the Legislative Committee composed of Carl Hoffman, President; Ed. Estel, Vice President; Frank Gatch, Treasurer, and Pat Bacon, Secretary. We were assisted by Mose Stanbery and by the Executive Committee of the Iowa State Board of Agriculture, Charles Cameron, President, J. P. Mullen, Vice President, and A. R. Corey, Secretary, in their efforts in getting the State Aid increase from \$1,500 to \$2,000, an increase of \$500. A more detailed report will be made later by E. S. Estel, Vice President. As the bill was first drafted a five thousand dollar limitation was first asked for, but it was impossible to get the bill through with that limitation. Your Committee then thought they could get the bill passed with a three thousand dollar limitation.

"I want to state that Hoffman, Estel, Gatch and Stanbery deserve praise for getting this increase in State Aid. I have heard that it has been reported that by the State Board of Agriculture asking for an appropriation for the State Fair that they hurt the chances of the County and District Fairs in getting the bill for increased State Aid passed. I want to state here that such is not the case and the Executive Officers of the State Board of Agriculture helped us get our bill passed and in no way did they hurt us. We need better harmony and co-operation between the members of the State Board of Agriculture and the fair secretaries of the County and District Fairs throughout Iowa. The State of Iowa has more County

and District Fairs than any other state in the United States. The Iowa State Fair is one of the leading and greatest State Fairs in the United States. At the meetings of the International and American Association of Fairs and Expositions Mr. Charles Cameron, President of the Iowa State Fair, is considered a big man in fair business. His friendship is fostered and his advice and opinion is asked for by all fairmen.

“Brother Secretaries, in summing the whole matter up, just stop to think that the following gentlemen were formerly Iowa county fair secretaries: Charles Cameron, President; J. P. Mullin, Vice President, and E. J. Curtin, Superintendent of Speed of the Iowa State Fair. I will say that is some representation from the County and District Fairs of Iowa on the State Board of Agriculture.

“I would also recommend that this Association have a resolution drafted and have the same sent to the Chicago daily papers, and the Des Moines Register and Leader, and ask them to publish the race summaries of the Iowa Fairs. And after we have secured this co-operation from the papers please, Mr. Fair Secretary, co-operate with the papers and send them your race summaries.

“In closing I would like to recommend that this Association again adopt a plan for the holding of a spring meeting. Arrange to hold said meeting at a central point, say here at Des Moines, and all try and attend this spring meeting.”

It was moved by Mr. White and carried that the report be adopted, received and filed.

President Hoffman: Next on the program is the report of the Legislative Committee by Mr. E. S. Estel, of Waterloo.

Mr. Estel:

Mr. President, Fellow Secretaries and Guests:

In making a report of the Committee it is quite necessary and essential, I believe, to review a little history of how it came about that the Legislative Committee was appointed and assigned to these tasks.

Mr. E. W. Williams of Manchester at the last meeting gave some very good reasons why the fairs of Iowa deserved and should have state aid. The idea grew with the district managers and the officers of your organization and, just before the holidays, if my memory is correct, a meeting was called in this room for the purpose of considering a definite plan of campaign and to endeavor to increase the state aid for the fairs. At that meeting it was decided, after a great deal of discussion, that the fairs of Iowa should ask for state aid to the extent of eighty per cent of the first thousand given for premiums to agriculture and live stock at the various fairs, seventy per cent of the second thousand, sixty per cent of the third thousand and forty per cent of the remainder, with a maximum of five thousand to any one fair. I might say that that was a very beautiful dream, and those who were here returned and dreamed. We came later on to face a condition which Iowa has seldom had, a condition which made it almost impossible for the legislature to divide up the funds they

had and to treat everyone as they asked to be treated. The Legislative Committee which consisted of Mr. Bacon, Mr. Hoffman, Mr. Gatch and myself had the very able assistance of Mr. Stanbery, who, we might say, is an old war horse in politics, and he helped us a great deal in securing the aid which we finally received. I also want to say, as Mr. Bacon did, that we had the most hearty co-operation of Mr. C. E. Cameron, President of the Iowa State Fair; Mr. Mullen, Vice President, and we had some very good advice from Mr. Corey. I believe, gentlemen, that if we had not conferred with these men who understand how to go after the legislature that our efforts would not have been rewarded as well as they were.

It was finally decided to give it to Mr. Santee who did such excellent work for the fairs in previous years to secure state aid. Mr. Santee was very willing to accept the bill and I want to say that he did some hard earnest work on the bill. He was assisted by a number of men in the House that I want to especially mention. One of these, and among the first, is F. C. Sampson of Audubon. I also want to mention the good work of H. B. Moorhead of Scott County, of J. W. Hanna of Benton County, of J. H. McGhee of Cerro Gordo, of L. B. Forsling of Woodbury, F. C. Lake of Woodbury, and Clyde H. Doolittle of Delaware County. We went before a good many of the committees of the House.

After having what we might say a difficult time in the various committees of the House the bill was finally brought out on the floor and it was passed by the House after two months, providing, as Mr. Bacon said, an appropriation of a maximum of \$2,000 per fair. Then came the task of putting it through the Senate. In choosing the man to handle the bill in the Senate we again were at our wits end to know just who to use. We finally decided that Ray P. Scott of Marshall county could handle the bill for us. Mr. H. C. White, B. M. Stoddard of Woodbury, E. M. Smith of Madison, Geo. S. Banta of Delaware, D. W. Kimberly of Scott, Henry C. Adams of Algona, and Mr. Holdoegel of Webster also gave valuable assistance in getting the bill through the Senate. We had the same task in the Senate that we had in the House and the bill was finally passed just a week or so before the adjournment of the legislature last spring.

The bill has resulted in the ninety-two fairs of Iowa receiving an appropriation of \$157,690.90, compared to an appropriation of \$113,013.24 last year, or an increase of \$44,677.66. Now as to whether that is worth while or not and as to whether the fairs needed that money or not I just want to call your attention to the report of Mr. Corey in which he states that twenty-one fairs had overdrafts this year of \$50,351.33. A great many fairs, the smaller ones, would have had an indebtedness on their hands had they not had the increased state aid which was given them. I notice from Mr. Corey's report also that the fairs are paying interest, and at six per cent I figure out they are paying \$64,610 a year or \$20,000 more than our increased amount of state aid.

Some of you may ask, what else did the legislative committee do? Were there any bills that were of possible interest to the fairs that were not passed? The legislative committee considered it their duty and they considered they had enough to do if they did it right, to put through the

increased state aid. They considered that more important than anything else. There was another bill introduced in the legislature, in the House, that provided for a different method of selecting members of the Board of Agriculture, State Board of Agriculture, than that by which they are selected at the present time. The committee did not take action on that bill because they were not directed to by this body. The bill did not pass. We thought that that bill was up to the individual members of the organization. There was another bill known as the Aldrich bill which was introduced and that is all. It stopped. It is unnecessary to go into details in regard to that bill.

In closing the remarks I have to make I want to say this, that I noticed a tendency among some of the members of the legislature to favor an appropriation which would go just far enough to give their fair all the aid that could be obtained. When we asked these gentlemen why they took that action, in some cases the reply came, "our fair would only get this amount, it does not interest us to any further extent and we will vote against it." I do believe, gentlemen, in all fairness to the larger fairs in this state that they should have had more assistance from the state than they have gotten. A district fair is nothing more than a broadening of the county fair and as such it is doing the same service, and if we have exhibits of live stock at our county fairs, and we have a district fair that they bring the best of these exhibits to, the county fair and the district fair encourage them in their resolution to go to the state fair, and we want to develop the whole thing for the good of Iowa.

In conclusion I recommend to this body that their Resolutions Committee draw up a resolution thanking these various men whom I have mentioned as members of the legislature and if you see fit send a copy of that resolution to every one of the men who gave such valuable assistance in increasing state aid this year. I thank you.

President Hoffman: Gentlemen, you have heard the report of the Legislative Committee. Are there any questions? If not we will pass on to the question box. The Secretary will explain this to you.

Secretary Bacon: This is an educational meeting, and if you have any questions that are worrying you it would be a good thing for all of us if every representative or anybody interested in a fair to deposit a question in that box so we can use this as part of our time at the banquet this evening—something which we all have a chance to answer and have a chance to find out and bring it to the attention of these members.

The meeting then adjourned until 1:30 P. M.

TUESDAY, DECEMBER 13, 1921, 1:30 P. M.

President Hoffman: We will come to order. The first thing this afternoon will be an address, "Present Day Harness Racing," by W. H. Smollinger, Secretary American Trotting Association.

PRESENT DAY HARNESS RACING

By Mr. Smollinger.

I am glad to be with you. Harness racing has since the fair started been a fixed factor and is so closely allied with the fairs that I hardly see how one could get along without the other. In the early days when fairs were few and far between and when the implement manufacturers were endeavoring to get their goods before the people they hit upon the lucky plan of buying a few harness horses and staging a race at the fairs. They would go from the Wisconsin State Fair to the Iowa State Fair and down into Illinois with these horses. Later on they became so enamored with the sport that some of them became very prominent breeders. So that harness racing has been a part of the county fair and without the fairs harness racing would be sadly curtailed.

As to the popularity of harness racing, there is nothing I can say that so eloquently emphasizes its popularity as the scene which you witness each day and late afternoon where the crowd turns and leaves all other exhibits and fills your grandstand. That is only second to the splendid feeling of the treasurer when the report is received of receipts from the grandstand and his bank roll changes from an anemic to a plethoric condition. So that harness racing is the foremost attraction of the county fair and has had as much to do with the building up of the agricultural and live stock interests of the country as any one thing. It is today and always has been used as the lure to bring the farmer inside of the gates to show him by ocular demonstration what it means to use pedigreed seeds and pedigreed live stock.

When you talk about organized racing the American Trotting Association is the thing that first occurs in your mind; that is among the fairs and race tracks west of Pennsylvania. The American Trotting Association is your association and I wish to say I wish you would all take a little more interest in it. It is your organization and I do not know that any of you fully realize what you do and have done to keep harness racing going. The American Trotting Association is a voluntary association for the protection of its own members and for the keeping of records and to give aid and information to the people engaged in harness racing. There are five such organizations, four other than the American. I am glad to say that the American is the largest and the strongest of all these organizations. Fully one-third of its membership is located in the states of Illinois, Iowa, and Wisconsin. Illinois leads with membership and Iowa and Wisconsin are about a tie. The work of the office of the American Trotting Association, about from seventy to eight per cent of the work of the office is the correspondence with the horsemen. The balance of it is with the associations. I want to impress on you that the wise

policies of your Board of Directors whom you select, have been largely and altogether responsible for the signal success of the American Trotting Association. When it was first organized there were three hundred meeting in all this country and Canada that were members of an organized institution. The next year after its organization the year book reported nearly twelve hundred organizations, race tracks and fairs that were members of organized racing.

A great deal has been said about the scarcity of horses and what should be done to help the breeder and we see that constantly in the papers and often they find fault with these organizations and with the members thereof for not doing more and systematical breeding. If anybody has done anything to stimulate breeding and help the breeder it has been the county fair and particularly in the last few years as has become prevalent in Iowa, Illinois and Wisconsin, the material reduction of entry fees and the added money plan of racing, which is becoming more popular every day and securing a larger earning capacity for the harness horse. So far as the profits of the breeding are concerned we had a very good demonstration of that during this recent deflation of prices. I think you will all agree with me that all classes of pedigreed stock were largely reduced in price. That has not been true of the harness horse. I saw yesterday a filly sell that I knew very well was sold two years ago for \$200 when she was perfectly sound. She sold yesterday with blemishes on her for \$550 and she has not got a standard record even now. There is nothing that can be so profitable at the present time to the farmers and the small breeders as to breed harness horses. It is true that among the harness horses there is a large percentage that are not capable of doing what we would like to see them do on the tracks. It is also true that the horses that are not capable of performing satisfactorily have an income earning capacity as general utility horses on the farm. There is no horse bred anywhere in this country or any other that can so successfully under present farm conditions serve the farmer as the harness horse. If it were possible—and I guess there are some gasoline cultivators, and we will put them in a class with the heavy horses,—the difference between the number of hills of corn that the gasoline cultivator or large footed heavy horse will break down at the end of the row when turning him around would feed every farm horse in America. Gentlemen, I thank you.

President Hoffman: The discussion will be led by Mr. E. J. Curtain.

Mr. Curtain: Mr. President, Ladies and Gentlemen: There was not much of anything to discuss in that, he stated facts. We all agree, I guess; most everybody at least does.

We, here in Iowa, belong to the American Trotting Association, all our associations do, and we should. Two or three years ago under the conditions that existed the fairs were not paying enough for their racing to enable them to get horses to race. That caused the formation of an organization among the horse

owners called the Harness Horse Association, and that association is now quite strong; in fact, there was a meeting in Chicago yesterday of that association at which four or five hundred men attended. That association is working hand in glove with the American Trotting Association and trying to improve racing conditions. In the first place every track should be a member of the parent association, and that association of course is the American. There are several other things that the Harness Horse Association is trying to do. They are trying to get every owner of that association to race honestly, to not drop heats and not try to avoid records and all that. And they are succeeding admirably. I believe in Iowa you will all agree with me there was more honest racing and less suppression of time than any year since trotting has been organized. Now we want to try to make 1922 a little better than that. The thing we gentlemen of the fairs have to see to is that we put better judges in the judges' stand. I don't believe we try hard enough to pick out men that know something about racing. The average judge in the average stand at the county fair is not a competent judge. But he is possibly a brother secretary from the next county seat fair or possibly a man that twenty years ago owned a race horse and is not familiar with the rules; he is not familiar with present day conditions. He is an honest man, a good man, but it is a good deal like the average fair secretary being elected president, if the town is large enough, of the lawyers' club of his town, he would not make a very good president to decide disputes among lawyers. The same thing figures out at the race track. A lawyer may be a very good lawyer, but he don't know anything about judging a horse race. Try to get men in the stand that know what they are doing; not that they want to do right, but get men in there that do right because they know how to do right. Then you are stopping troubles and would have fewer cases coming up before the board in the way of suppression of time. The average horse owner is being educated now to not ask for it. I will admit a good many of them still want it, but if you have the right kind of judges in the stand they will not allow it, your racing will be clean and snappy, and we all know that without racing the county fair is not a success. People want education. The average attendant of the county fair is supposed to be there for education. But if you don't at the same time you give your education give a little racing and attractions and that kind of

stuff you do not get very much education in the man. He gets education but he is attracted by the attractions, and I consider, and I guess we most all of us do, that one foremost attraction is the races at the county fair. That is all I can say in the discussion of Mr. Smollinger's article because he stated facts.

Mr. Young: Just one question about judges, who would you suggest to put in there, what class of men?

Mr. Curtain: I would select men that own horses that are not racing if I could not get anybody else. My idea would be that you should send and get somebody that does know, that makes a business of judging races. That would be the ideal. At Des Moines at the state fair we handle it in that way. We have only one judge. We have a man, however, that is an expert, we pay him for it, and the result is we have very little trouble. Where you have judges that do not understand it they may make a ruling entirely wrong which they think is all right. My thought is to have one single judge and pay him for his work. I believe only one poor judge is better than three poor judges because he is standing out there in the lime light and he cannot divide the responsibility with two other fellows.

President Hoffman: The discussion will be continued by Mr. George White of Malvern.

Mr. White: It is a little bit embarrassing for me to get up following the two men who have just spoken on this subject.

I think these gentlemen have covered the ground very thoroughly. Mr. Smollinger spoke about the price of harness horses staying up and the other pure bred stuff decreasing. I guess we can all very plainly see why that is. Everybody else has been breeding pure-bred hogs and cattle, of draft horses there is not much breeding, and a horse that was not good for a race horse wasn't worth much for anything. Consequently fairs haven't had good horses. Horses got very scarce, that is the reason prices keep up; nobody breeding them to speak of. The early fairs at the races might have a good supply of horses, but after the middle of August you have got to go begging to get horses enough to put on the program. We are all fair managers, all like to see sport, and my suggestion would be in each community where you have got a fair get a few of your members to go out and pick up a good brood mare and get somebody to get a stallion somewhere

in the locality and they might possibly have a race horse once in a while, but bye and bye as it is nobody will have any horses.

President Hoffman: Next on the program is "Novelty and New Features for Fairs," by Louis Latta of Indianola.

Mr. Latta: The subject of my few words this afternoon is in regard to the home talent circus that we put on at the Indianola county fair. This circus was organized by myself under the rules and regulations of the fair board with a hope of putting on something that would entertain and draw a crowd of people to our fair and also make up for the money we had lost the previous year. We had been rained out, we had no money to do anything with. Several years ago I put on a small town circus of home talent at the little town of Glidden, Iowa. We had nothing but two or three clowns, a couple of horses, an animal or two, home talent, and the outcome was we had such a large crowd we could not take care of them, and our circus only amounted to about twenty minutes, we were just part of another program, but it was a big hit. So this last year I put the proposition up to our board, and they thought if we could put it on inside of so much money we could go ahead and organize it. Of course we were all after results—we wanted to make money. We advertised in the home papers we wanted talent, which we got. We got abundance of talent, we got too much. We picked the best that came to us. We put on an entertainment lasting two evenings which took in about \$1,900. The last night it rained or I think we would have taken in more than a thousand dollars more. The circus itself was two rings with a stage in between the same as you see in our big circuses, as I said before of home talent and organized the same way. We first had a manager; we had our property boss, our boss hostler, our costume and wardrobe boss, ring manager, stage manager, electrician, every part of the circus was organized under one department. Each one was subject to me. We had a parade that consisted of seven animal wagons each drawn by four or more horses, in which were the boys and girls and different ones in these costumes representing different animals. Our girl bareback riders were girls 14, 15 and 16 years old. One girl particularly had never been to a circus in her life. She started in rehearsals about the first of June, and I can leave it to people who witnessed the show that on the 17th of August, that night this girl actually turned back somersaults upon one of our own horses backs. Just such things as that talent can be worked up. The idea of this circus, or it does not need to be a circus, to my mind, is to create something new to draw your crowds. All of you gentlemen won't have in your home territory the amount of talent we happen to have at Indianola. We have a large school there, Simpson College, in which they have been teaching music for a great many years and nearly all the town people had children going to this school for musical training. We picked a chorus of forty girls, each and every one of them good looking, all could sing and all could dance. We gave this musical review. It was one of the big particular features of the circus. The reason we ran the musical review was this, I believe that at the night show county fairs, if you will get clear away from your afternoon performance and put on

something, it does not need to be home talent, but if you put on something, home talent amusement show, minstrel show or play, musical comedy or vaudeville acts in which the whole community is interested. When you get 100 to 150 people in a circus you are playing to an audience right there of a thousand people, they all have parents and all have relatives that want to see these different ones in the show, so naturally you are getting quite a start on business.

One other point I was asked to bring up here this afternoon, that was in regard to the afternoon performance. So many people get tired before the afternoon performance is over. That is one reason why the night performance of the county fair don't make money. They get tired in the afternoon at the races and afternoon performance, too many free acts, lasts until six or half past in the evening and by that time they want to get away, want to go home. My suggestion is to everybody in the afternoon put on all the races you want to and give them a number of free acts but make them snappy. Give them a lot of pep and when they go home when they are through at four or half past or five o'clock they are not tired; they have time to walk around and see some of the other shows and take an interest in the fair ground itself and visit with their neighbors and loaf around, have their supper or their box lunch. By that time they are ready to stay for the evening show and they want to take it in.

One of the big features we have at Warren county and have had for several years has been an opening day parade, it is called, or merchants' parade. This parade consists of floats, all kinds of automobiles, wagons, different things fixed up representing each merchant. It has been a big drawing card to the fair on the first day. This parade generally takes place about one o'clock and we have the band and the music goes with it, parade out to the fair ground from town. That is another added feature we have always had.

I wish to say one of the sad mistakes we made this year which we felt in our pocketbook afterwards was the fact we gave too many complimentary tickets. Too many children could not come, could not be in the show unless they were chaperoned; could not be with us because the father was afraid to have them out there at the fair ground at night unless he was there, he had to have a ticket so he could come to take his boy or girl home. Another year we are going to say that is a very good idea and we would like to sell you a ticket for him.

Gentlemen, I haven't very much else to offer to you, except this, if any of you should desire to put on a home talent burlesque circus in your community I would be most glad to offer you aid insofar as any information that I can and be glad to help you in any way. This is just some features, we like to pass them one to the other. This circus cost us about \$1,500 to put on. I thank you.

President Hoffman: The discussion will be led by J. Fred Henry, Secretary of the Warren County Fair, Indianola.

Mr. Henry: Mr. President and Gentlemen: I don't know very much about any fairs except our own fair, the Warren County Fair. I have been secretary of it three years; I was out three years, now I am in again. We have nearly always managed to have a little balance; this year have a little loss, lost some but we are going to try to make it as quick as we can with these different things we are putting on. This year we had no harness races, not because we don't like harness races but because it was hard to get horses, as this gentleman said. In the place of that we had races of nearly every other kind, foot races and horse races and different kinds of races and in the afternoon had a pageant of early Warren county. It was a little thing but brought lots of people to our fair. Four hundred children from all over the county in this pageant of school age, and it brought lots of people to our fair. We had another race that created quite a good deal of excitement. That was of a horse and Ford touring car. The only way I can convince you is to try it, a standing start; a good horse will beat the car in a standing start. It was hard to make me believe that, but they did it, on a half mile track.

Mr. Latta told you about his circus. It was a scream from start to finish. He told what we took in with it; we would have taken in another thousand dollars but for the rain. He didn't say anything about the real animals we had. We had a real bear and real mule, and about twenty to twenty-five clowns. You know we are pretty close to Des Moines, we have pretty stiff competition. I think they go to that fair, the boys down there never miss any state fairs, at least I don't. And for afternoon attractions, as Mr. Latta said, it must be different from the evening attractions to get crowds. Fireworks, we have tried that a time or two but fireworks are too expensive for us. We never can get fire works to pay. This year we had no free attraction except aeroplane. I thank you.

President Hoffman: The next is an address, "Boys' and Girls' Club Work," by Frank P. Reed, Assistant State Club Leader, Ames.

Mr. Reed: I think in this discussion or talk it might be better to include more than just the pig club exhibits, and for that reason the discussion will have to do with the carrying out of

the pig club work not only in the county fairs, but I shall deal more in general terms, more in terms of general club subjects.

Significant changes are rapidly being made in keeping abreast with changing industrial and agricultural conditions. No greater change has been made than that this convention should program that a part of its time in this busy day's meeting should be given over to the Boys' and Girls' Club Work.

Last year you listened to that excellent address of Mr. Clark of Marshalltown on Baby Beef Clubs, in which he said that the greatest educational exhibit at the county fair was the beef exhibit. Mr. Taff of Ames two years ago addressed you upon this subject and gave to you the three real purposes of club work which I think are worth repeating at this time.

- 1st. The doing of something worth while, by way of illustration: A boy in the corn, calf or sheep club will study the best methods of doing the work according to the most approved practices and keep a record of the work done and results achieved.

- 2nd. He will demonstrate to the community the thing he is doing.

- 3rd. The socialization part of the work.

A club is organized into a working group with officers from the membership in charge. A yearly program is outlined with timely topics relative to the work discussed. Each meeting is divided into

- 1st. Business session.

- 2nd. Demonstration features.

- 3rd. Recreation.

The second phase of this work is the one in which the fairs and expositions may render a special service, in giving opportunity for the boys and girls to exhibit their products which are a result of the club work. This gives a chance to compare their finished product with the products of the best agriculturists of the county.

The appropriations for the junior club work at the Iowa State Fair has grown from less than one thousand dollars distributed in 1917 under three lines of work to a premium list in 1921 of over eight thousand three hundred dollars distributed under seventeen lines of work with a superintendent in charge of each of the various lines of work.

In 1917 six club teams staged cold pack canning demonstrations in fruits and vegetables. In 1921 seventy-seven different county champion teams demonstrated ten different lines of work. These demonstrations ranged from the making of attractive collars and cuffs to the selection of the type of a calf that will make a good beef animal.

Two state champion demonstration teams were selected to represent Iowa at the Interstate Fair at Sioux City.

Two thousand one hundred and ninety-six entries were made at the Iowa State Fair in addition to the Home Economics work where the exhibits were entered by counties.

Nine hundred and fifty-two boys and girls exhibited.

Four hundred and ninety-three received prize awards.

Another interesting feature of the work is the judging contest where thirty-one different county champion teams competed in judging live stock and corn in 1921.

At the Mississippi Valley Fair at Davenport every boy and girl who had been in the calf or pig club and exhibited his calf or pig was housed and fed at the expense of the fair association. At the close of the contest 16,845 pounds of beef were sold at auction at an average price of \$12.65 per cwt. These calves were bought by different meat markets from nine different towns in Scott county.

The Interstate Fair at Sioux City is featuring both club exhibits and demonstrations. They program a club contest in both exhibits and demonstrations, paying the expense of two demonstration teams from each of the twelve mid-western states. These teams are the guests of the Interstate Fair during the week.

One hundred and seventy-eight purebred swine were exhibited at the Rockwell City Fair by the boys and girls in the pig club work. A judging contest was held where the prize awarded was a pure-bred gilt. Over fifty gilts were distributed, one of the conditions of the award being that the club member is to raise a litter of purebred pigs and to exhibit them at the fair in 1922.

The Adams County Fair offered special premiums to teams staging poultry demonstrations. Many county and district fairs pay the expenses of the champion team to the State Fair or to the Annual Short Course at Ames.

One of the greatest educational features of any fair for the improvement of live stock and farm practices is in giving opportunity to the boys and girls to display the finished products from their club work, where under guidance they have used their own initiative and followed the most approved practices in how "To Make the Best Better."

I was at the deliberations of a club meeting down in Adams county this last summer where there were nine boys out of eleven in the club meeting in the afternoon, each one having ridden a pony in to that meeting. The president was presiding and I suddenly got an inspiration to talk about something that was not on the program. Just a farm boy, who never attended high school, was presiding, and when I had finished about the first sentence I turned and I saw he wanted to say something, and he said, "Now, Mr. Reed, if you will just wait, after this business session is over we shall be glad to hear what you have to say." I don't believe the chairman here could courteously call a man to order any more than that boy sixteen years old had who had never been anywhere else but country school. In talking with his mother afterwards she said at one meeting when there were two or three matters to present a man had about killed the business session by talking too much and she said "he and I had a conversation over what he ought to do, and he had outlined the procedure which he took to call me to order, and believe me I was good thereafter. The social side it seems to me is one side we want to emphasize from the standpoint of the club.

You as members of the Fair Managers of the state are specially interested in the second feature, the demonstration feature. One of the things to emphasize is that the boy demonstrate not only in his own community but in the county fair the work he has done. If live stock work exhibit live stock, if corn, corn. If girl's work, if garments, exhibit garments, canning, food, whatever it may be. Get them to compete for prizes. I have been convinced the last two or three years it is not necessarily the amount of the prizes given to get them to compete. As an illustration of that three years ago at Sioux City, I think three, possibly four, a boy had won \$25.00, won first in the baby beef exhibit. He had won \$15 in the open class, making \$40, and sold the calf at auction. I think the calf brought twenty-three and a half cents a pound, that is when they were getting good prices. The next morning after that sale as he went down to the stock yards and turned over that calf to the packing firm that purchased it, he came back carrying the halter up to the exchange building where he had received his money for the purchase of the calf, and made this significant remark; going along with his head down, I presume he had been thinking of the time when he got home. He said, "You know I would rather have a ribbon that I won that first prize than the whole \$40 I got." In other words the fair hadn't provided a ribbon for that boy to take home with him. The significant thing was one of our club leaders at that time believed in big prizes. Then this boy said, "Do you know, when I get home I will have picked up two hundred and some dollars for that calf, and I will have that premium money, but that won't stand out and tell the boys in our community that I actually won first place down there at the fair." In other words a ten dollar bill just looks like any other ten dollar bill, but a show ribbon stood for the thing he had in mind as showing these boys he really had achieved something.

Mr. E. N. Hopkins: I want to announce to the Secretaries here, that ninety-two of these Iowa champions, boys and girls, went to Chicago and made up a delegation of 550 champions from twenty-six states and did some fine demonstration work in Chicago. It was a wonderful trip and many of your associations paid the expenses of these winners from some of the counties. I merely want to suggest that you give the boys' and girls' club work at the various fairs a chance and they will help you out, as many of you know.

President Hoffman: This discussion will be led by Mr. Andrew Stewart, President of the Rockwell City Fair.

Andrew Stewart: Our Secretary, Mr. Bacon, has asked me to explain the plan of conducting what he has kindly termed a successful pig club.

In the spring of 1920 the fair board decided it would like to put on a pure-bred gilt club similar to the Blackhawk County plan, provided it could raise the money to buy the gilts.

The Rockwell City Fair was organized in 1905 with little funds, and has been like the Irishman with his twins on his knees when asked what he was doing, replied, "Shure, I'm holding me own."

We happened to have a pure-bred hog breeder and also a banker on our fair board. The one said he would donate a gilt, the other the cash to buy one. From that start after talking the matter over with the county agent we decided to call on the pure-bred hog breeders of the county and ask their co-operation. The county agent and one of our directors visited thirty-three hog breeders of the county and thirty-two of them gave gilts, only one refusing. One young breeder said, "I think it's about time you were getting to me. I want in on this."

We did not ask the breeders to give their gilts. We sold them advertising. The breeder's name and address, also the fact that he had donated a gilt appeared in the County Farm Bureau paper with a circulation of 1,500 copies, also in ten county newspapers who were glad to receive anything of this nature as news. Fifteen hundred premium lists were issued in which the same statement appeared. At the fair, a card was placed above each pen giving the breeder's name and address.

The fair management decided to place two gilts in each of the sixteen townships. The 32 gilts were delivered at the fair August 2d, 1920. We held a judging contest by townships. The boy or girl having the highest standing in their township got first choice, the next highest second choice. There were 42 boys and 4 girls entered in the contest. Three of the girls won pigs. The boy or girl signed a contract to care for and breed the gilt to a good boar of the same breeding and return two pigs to the fair association the next year. The sow and balance of the litter then became the property of the boy or girl.

This year 26 sows and their litters were brought back, six of the sows failing to breed satisfactorily. We had 59 boys and girls in the judging contest this year. We put out our 52 gilts in the same manner as last year. The Rockwell City Fair now owns 58 purebred gilts and next year will have at least one hundred. The Fair Board considered our pig club the best feature we have had the past two years. Our county agent has taken full charge of the club, and his assistant, Mr. Jones, who has had charge of all club work in our county for the last two years, told me that the fair's pig club amounted to more than all the rest of the clubs in the county.

We have been accused by one authority of taking advantage of the boys and girls. He stated that for the investment of one pig the boy or girl must give us two. We contend that the boy or girl invests nothing but their feed and care. For example, one boy, Lester Michaels, received a gilt at our fair in 1920. In 1921 he brought her back with a litter of eight. He received \$22.00 in premiums, and after leaving two pigs with the Fair Association, he sold the six remaining pigs for \$176.50. Later he sold the sow with a litter of eight September pigs for \$75.00. This makes a total of \$273.50 for his investment of feed and care during fourteen months. Another boy won \$49.00 in premiums; \$36.50 in the open classes. One boy had bad luck. His sow proved barren, and he sold her for \$35.00. We settled with him for one gilt which cost him \$20.00. This gave the boy \$15.00 for his feed. This lad entered the contest again this year and won a gilt.

The main object of the Fair Association in organizing this club was to create a greater interest in pure-bred live stock among the boys and girls as well as among the older breeders and farmers. The interest that the patrons of the fair showed in our exhibit and judging contest proved that we had accomplished our purpose.

We have been told that you cannot get something for nothing, but this plan seems to come as near it as anything we have heard of. The breeder received advertising, the boy received a sow and litter, and the fair received two pigs.

President Hoffman: Next on the program is a paper, "Ladies' and Girls' Department Work at County and District Fairs," by Miss Ruth English, County Home Demonstration Agent, Spencer, Iowa.

Miss Ruth English: I imagine you men are interested vitally now in the question of pushing your fair for the next year so it is going to be the best, perhaps the most successful fair you have ever had, and I want to try to convince you in a few minutes this afternoon that you must not forget the girls and women. The women are functioning in most every line of work, so they are interested in the fairs, too. I want to say something about girls' club work. The first thing it is necessary to have a good leader, because you men are all busy I imagine, just the same as the women tell me they are, you want to shove the responsibility on to somebody else. The best leaders are the ones that can get suitable leaders into organization work, do these things in detail and take the responsibility from you. So you want to try to find somebody who is very capable and very sensible who can get along with people well, shoulder the responsibility of the girls' leader, so really you don't have to make a demonstration. The tendency is to shift this responsibility on to one person in each township if you can get things worked out that way. Of course that is a little ideal, but you can have two or three in your county to take the responsibility from you, and begin early enough so they can have things well rounded up by the time your fair is held.

You must have an object and all work to the object of the girls' work; we must have interest taken in these things, an interest of the parents. If we can interest these parents in the Girls' Club work it is going to draw a different type of people to your fair. I found out that this year a good many people came for the women's part of the fair that would not otherwise, and you are going to have the same thing. If we can get this club work of the girls started then their parents are going to follow them right in to see how their youngsters are doing, how they compare with the neighbors' children. Then it gives a wonderful opportunity for an inspection of their work that they have carried on through the year. I think any county that has a fair should honor that fair and should really feel as if it was their fair and that it was held for their benefit. The rural people will feel as though they had a chance to enter into competition with the town people as the town people have, therefore you can interest more of the rural people.

We have got a lot of people in this county in the rural district if you can make them feel they can leave their work not only one afternoon but every afternoon the fair is held, then your gate receipts are going to look lots better than if everyone has stayed home with washing, baking, ironing, scrubbing and all other things women have to do. The possibilities of the girls' club work as proposed should mean a demonstration. You could arrange with the leaders to get the best demonstration teams in your county to demonstrate at the fair. If these little girls ten to eighteen could show some of these grey headed women how to do things correctly they would be more eager to push the work. Perhaps if they showed people how to do things, they demonstrated things we will have more people eager to come for that purpose. Then the exhibits in that, we want to try to maintain and establish higher standards because you know yourself at your own fairs you have seen lots of things you didn't think very much of; they don't really come up to standard. So we must establish these standards and the exhibits could be much more attractive.

Then the schools, I think that is an excellent idea, if you can get the county school authorities to co-operate with you, let the youngsters give a school day, and you have them and their parents with them that day, and have them get in on the program, have their plays and songs and entertainment they can put on would appeal to all these people, and the parents of these children on the program would want to come in to see what their children were doing. Where no organization is present in your county to have one of these leaders you might say or an organization to take the responsibility perhaps you could use the city leader of boys' and girls' clubs or some extension department. Your county pays their salary the same as some of the others do, and somebody could be with you at the time of your fair to help with the work and it would be very worth while.

In the women's work in the county fair, the aim should be to establish and maintain higher standards in all of the work and then we must encourage the spirit of competition. Some of you men know right now what I am thinking, but you think you know women and you think they can't be pleased, if they don't get the prize they are through with the fair; you know a lot of women are that way. We have to educate them up different in your county newspaper columns and annual premium list to have the correct spirit of competition. If they don't get the prize one year don't have them turn away from the fair next year, but have them come back stronger than ever next year, perhaps they may find out why they failed in the first case.

The matter of the premium list is an important one. Several things must be considered in the matter of premium lists. You know after all—I was glad to hear Mr. Reed bring out that thought—it is not really so much the money that these people get as the ribbons. I went out in the country in one of the rural homes in my county and I noticed the wall, there was almost a string of blue ribbons clear around it, and I went clear around the room with this girl and she told me what she got this one on and what that one and all the others. She cared lots more for those than the real money prize. If you can get by with giving just a

little prize money and be sure that they get a blue, red or yellow ribbon, whatever you happen to select in the color line, they will be very well satisfied. This premium list must be made out carefully. The list that I looked at should be revised. Sometimes you know we pretend to please you men. You men are not capable of fixing up this premium list. You think you may be, but you are not. Not any more than I would be to judge stock and poultry. I don't know very much about that. You don't know very much about a premium list for women's work. We want to have that definitely classified. You insist on having your premium list definitely classified and you are going to save a lot of trouble at the end because you are going to know whether or not this one article is suitable for this class or not suitable for it. It is going to help the judges a lot when they come to judging. I can speak from experience on that point. Classify them carefully and you should have your classes definitely defined and there will be no falling down. The reason you fall down is this, you have somebody entering an article she thinks capable of taking a prize, she enters it and you haven't any class made for it to put it in this class or put it in the other class, and then when the judge comes to judging it is almost impossible to do justice to the exhibit because you have articles checked in that don't belong there. Then you must have a capable lady to enter these things. She must know what is not fit to be entered but at the same time not cause any trouble, and yet your standards will be raised—you can't make them mad because they won't come back but we have to sort of just pat them the right way. The "other than named" that is a class,—I remember I judged once, I had everything in it from a collar and cuff set to a dress and from a baby's cap to a bed quilt. If you can see any points of similarity to judge on you can do better than I do, I could not; it is just by guess and by gosh and mostly by gosh.

Another thing, you want to be careful that you stand pat in all your decisions. If you go to work and work out these things stay by it. If you don't it is all going to be work lost when you come right down to the end of the fair if they are going to do things other than you had planned. Having made out this list carefully defined make it stand until the fair is over and there won't be any trouble. About judging, lots of people think in the ladies' work you should have two judges work together. That is a matter of personal opinion, however. One competent person can do it very nicely. I think in your premium lists if you describe the articles, the different names in describing these different things, it is going to help the fair. They know the material then and they are going to bring it in, just the same as they do with the cattle and horses. Women work right along with the men on the same basis and all for the same purpose of raising the standards in their work.

Then the educational work is a very important thing. You are never too old to learn. That is the spirit women have, I don't know whether men have the same spirit or not, and if we can just do some educational work along with the fair maybe somebody else's husband who wants to go to the horse races and the wife would not think of going, she will go and spend her time with the exhibits and perhaps the educational work and different attractions will do so well they will come back the second day,

perhaps the race wasn't finished the first day, and if you had a demonstration of food advance work the second day friend wife will come along too. In that respect you could use the state extension department, you could furnish a tent for them and the department would furnish the rest of the food demonstration or any line of work that perhaps the committee from your county would select for that time. The usual course we give at the fair we have two thousand people in the four days, remaining through the entire demonstration, and that really means that the type of people you want to be interested in your fair because they are going to back you in your fair work.

There is nothing that takes the place of the women's work in a fair because to make a fair function as it should it has to entertain and amuse and educate the entire family; the boys' and girls' work and women's work along with the men's work makes a fine combination, and don't forget the women and girls either. There is nothing in a locality or county that takes the place of the fair work and you should start right now to think about the women's part and ask them to do these things for your fair. I am sure you don't need to worry about this next year's fair if you do these things. The farmers' wives will commence to save egg money right now so they can pay the family's admission into your fair.

President Hoffman: We are greatly indebted to Miss English for talking to us on this subject. Has anyone any questions?

President Hoffman: "Rain Insurance for County and District Fairs," by Mr. O. J. Davis, of the Home Insurance Company of New York.

Mr. Davis: I count it a great honor as well as a great pleasure to have this opportunity of speaking before this body of men on the subject of Rain Insurance, and thank you very much for the invitation.

In so far as Rain Insurance is concerned, judging from our company's experience this year, we would advise all companies desiring to accumulate great wealth to refrain from writing this class, as while we have taken in \$16,525.00 in premiums paid, our losses were \$37,075.00, or about 230 per cent. However this year's rainfall was rather abnormal as compared with the average rainfall in this state.

The object of rain insurance is to indemnify against loss of expenses or profits, or both expenses and profits occasioned by rainfall, of any event whose success is wholly or in part dependent upon fair weather. That is, the items which we insure are the expenses or profits, or both expenses and profits of such indoor or outdoor events as baseball, tennis, golf, football, track meets, boxing matches, horse races, motorcycle and automobile races, fairs, carnivals, concerts, dances, outdoor theatricals, pageants, fetes, garden parties, auction sales of real estate and cattle, amusement parks, concessions and parades. This list will give a fair idea of the scope of the coverage of rain insurance.

The usual method is to insure against loss caused by one-tenth or two-tenths inches of rain during certain stipulated hours, 24, 12, 6 or 4 hours, according to the exigencies of that particular event.

Ordinarily rainfall of less than one-tenth inch is not considered as capable of causing much loss or preventing any event or the attendance thereof. Where a very small amount of rainfall will do damage we are still able to furnish indemnity under a special form. Where an event will be postponed or abandoned by reason of rainfall it is possible to secure an abandonment form which nominates only that the event be abandoned on account of rainfall, or a certain amount of rainfall.

Rain is measured by the United States Weather Bureau, in inches or decimal fractions of an inch, and is usually recorded by the hour. The smallest measure is one-one hundredth of an inch, less than that amount is recorded as a "trace." Government records are final as to the time and the amount of rain. If the event takes place at some distance from a government weather bureau special arrangements may be made with a co-operative weather bureau observer to gauge the rainfall. Should this be impracticable a non-partisan observer may be engaged, and where none of these can be arranged for we have made a practice of taking the affidavit of two or three absolutely disinterested, responsible parties as to the hour and amount of rainfall.

Rainfall coverage is an exact contract in which the conditions of liability are well defined. Should it rain the required amount at the time and place named the liability is clear. Should the rainfall be less than the required amount, or at other hours than those specified in the policy no liability attaches to the company.

Rain insurance is a comparatively new business and is flexible, and wherever there is a practical demand, we can devise a practical means to meet it. These forms may be written specific for one event, or specific for a series of days, or all the days in a schedule may be written blanket.

Rain insurance is a special and limited time contract, and the premium must be paid at least seven days in advance of the event, and the contract is not subject to cancellation. The reason for this is obvious. While the neighbors of the Weather Man comment on the fact that when the weather prediction is fair, that gentleman is known to go forth for his daily duties with his umbrella under his arm and wearing his goloshes, yet it is an established fact that the Weather Bureau is right eighty-five times out of one hundred. Knowing that the weather can be predicted with that accuracy from twenty-four to forty-eight hours in advance, justice is apparent in the following position: It is neither fair for the company to take premium when it knows that it will not rain on the following day; neither is it fair for the assured to obtain insurance when he knows that it will rain on the next day.

The term Rainfall as used in our policies shall be understood to include snow, sleet or hail and such precipitation shall be measured as rainfall in accordance with the method pursued by the United States Weather Bureau. For instance, according to the United States Weather Bureau, it takes one inch of snow to each one-tenth inch of rainfall.

Rates are based on the average number of days of rainfall for each month in each county. As an explanation of the rates applying in different

localities, it will be interesting to note the difference in the number of average days of rainfall in the counties of Benton and Scott since the weather bureaus were established.

	Benton County	Scott County

November	6	8

Our experience with this kind of insurance, though rather discouraging this year, has made us a host of friends, and we are optimistic as expressed by the poet who wrote, "Hope springs eternal in the human breast; man never is, but always to be blest." So we are going to try it out next year and see if we can be better guessers.

President Hoffman: We have another paper on the same subject by Mr. W. J. Hatcher, of the Hartford Insurance Company, of Hartford, Conn.

Mr. Hatcher: In England for many years back, we are informed, certain Lloyds have sold this form of protection which latterly showed some tendency to depart from legitimate insurable interest and become of a more speculative nature—a mere bet against rain without tangible interest. It was not until 1919 however that the Hartford Fire Insurance Company saw that the demand for protection against the element rain had reached such proportions that something must be done to adequately provide for it. After months of investigation it began selling its policies in 1920 and is now protecting more business and events against rain in this country than any other company.

Our policies, as are those of all other companies writing rain insurance, are based on rainfall experience at the place where each event is insured—and predicated on data compiled for many years by various agencies of the United States Weather Bureau. In other words, in attempting to underwrite the rainfall hazard we are dealing with averages similarly to all other branches of insurance in which for each class a certain probability or loss expectancy is known. In rain insurance, however, there is liable to be greater variation of risk from year to year than in any other known line—at least that is true in a majority of places. On this account in order to operate without serious loss it is essential that we secure a wide distribution of liability.

We were not able to realize this distribution this year, but the ever increasing demand for rain insurance indicates we will not only soon reach

it but will in fact, unless many other companies enter this business, be obliged to consider curtailment of liability. As a matter of fact we did shut down on acceptances this year on such days as July 4th and Labor Day.

Time and experience have brought out for development a wide range of insurable interests—interests susceptible to loss by rainfall and we have been trying to solve the needs of those interests to not only provide suitable protection but to properly conserve our own interests at the same time.

Besides county and district fairs we have figured on and insured exhibitions, in and out of door entertainments, baseball, football, lawn tennis and field meets; races and contests of all kinds in fact; refreshment and amusement propositions of all kinds, both within and out-of-doors. Even a ladies ice cream lawn fete and a wedding! We have insured events having a direct and tangible income and those from which the income was indirect—wherever, in fact, an insurable interest against rain could be shown. We are figuring on building operations, highway and otherwise; also on truck merchandise deliveries affected by road conditions.

There seems to be as much room for the development of insurable interest against rain as against fire and windstorm within the limits of disablement or curtailment of business, not property damage—but, please mark this, our operations are confined to legitimate insurable interest.

A question was asked regarding what as to rainfall outside of the city in which the event is held, how wide a territory is covered?

Mr. Hatcher: We have gone out for a distance for additional rate charges, providing against cumulative rain readings. Take it here in Des Moines we might take on a policy providing one or two other gauges, but charge you more rate on account of assuming rainfall at these different stations.

Mr. Stanbery: I don't know whether you men have all got this report of Mr. Corey, but it occurs to me in this report it is summarized better than I could possibly give it to you, or any other individual.

President Hoffman: Are there any more remarks on this subject? If not we will go on with the program. Budget system for County and District Fairs, by Mr. J. P. Mullen, Vice President, Iowa State Fair.

Mr. Mullen: In giving my views on this important topic I am not unaware that the advocates of the Budget System or other similar measures that tend to lessen extravagance and lavish expenditures when out of harmony with the paying power of the producer and consumer, will always come in for attention and criticism from various interests as being too conservative. But there are times when both progressive and conservative can lay valid claims to wisdom. But considering present conditions I am

not unfriendly to reasonable conservatism in monetary expenditures when not absolutely necessary. As a basis for this opinion I will linger a while in the examination of the merits of the Budget System as a general proposition and its effects on the finances of the country through governmental legislation. The method of raising revenues to meet government expenses has on many occasions furnished us with national party issues. So the expenditures of this revenue through either the budget or departmental systems, whether in governments, private corporation or community enterprises have been discussed pro and con for many generations. But because of the serious problems that now confront us the discussion is becoming more and more intense. The adoption of the Budget System now when the questions of raising sufficient revenue from tariffs and taxation is growing more acute if not embarrassing would not, in the judgment of any sane person, prove a panacea for all our ills and should not be put forth or considered as the sole and only remedy for the relief of our people during the present liquidation after a period of doubtful prosperity and opulent extravagance. Rather would I view the system in its operation as a fundamental economic principle of government meritorious and efficient in times of prosperity as well as in times of adversity.

Viewing the question from this standpoint I recall the names of many eminent financiers and statesmen advocates of the Budget System. W. E. Gladstone, the "grand old man of England," as chancellor of the exchequer, turned to the Budget System whenever a financial crisis threatened the British Treasury. John Sherman while Secretary of Treasury in this country became an ardent champion also of this system. Ex-Governor Lowden of Illinois rendered conspicuous service during his four years administration saving his people many millions of dollars by the use of the Budget System. I might remark in passing that his great success along this line attracted the attention of the nation to such an extent that he almost reached the coveted goal of the presidency.

Ex-Congressman Good of our own state as chairman of the appropriations committee in the National Congress by the use of this system as far as the law would permit and against the opposition of powerful interests, saved the Treasury of the United States over a half a billion dollars. In the old and prevailing system of compiling appropriation bills the chairman of such committee weighing his responsibility found his greatest and most perplexing difficulty or duty in limiting or at least minimizing departmental raids on the Treasury. Still with all these advantages and economic saving in its application to government disbursements it must not be inferred that it is easy of adoption. It's a well known fact that there is now and always has been violent opposition to its use. So many interests are opposed to it. Besides departmental heads and commissions who are looking for increased appropriation for the exploitation of their own particular sphere of authority are strongly opposed to the Budget System. I might mention that this opposition is very noticeable, even dominant, in the committee room where every effort is put forth to crystalize into law through the passage of the general appropriation bill enormous sums of money for the benefit of special interests. I have here only hurriedly sketched a rough outline of this system and what can be accom-

plished by its use in keeping the expenditures relatively in line with the amount of revenue easy of access.

To my mind there is no doubt that the principles involved are sound and will ere long become the permanent law of our state and nation. Keeping in mind these beneficent results I have seriously considered if some good cannot be accomplished in the application of this system to the business end of county and district fairs or is it possible there can be any serious opposition or objections to its use through jealousy in the different departments of fair management.

To premise my advocacy of this system as a workable one and as a safety valve which I think you men ought to consider I want to state a historical fact in regard to revenue and expenditures. In young and growing countries showing any degree of prosperity the revenues rapidly increase relatively far beyond the expenses. In such instances the burden of taxation is not pressing and consequently there is little, if any, evidence of agitation about excessive governmental expenses. But on the other hand in older and more developed countries the decrease in revenue in relation to expenditures becomes more and more apparent to the point where in many instances the expense far exceeds the normal revenue. Where these conditions exist every expedient of government is invoked to replenish the treasury with the least possible annoyance to the people. But any long continuance of this burden breeds dissatisfaction among the people and in many cases financial disaster and revolution follow. Now applying these recognized facts to fair management in general we find a striking analogy in the comparison. From the published financial reports of the fair secretaries we find at a glance that some of them are growing and should without any question be reasonably ambitious of greater achievement because they have not yet exhausted the assets of their territory, while many others may possibly have garnered the almost full purchasing power of their communities. Now this classification may not be exactly correct in all cases but I think the records will show it is substantially true. Of the ninety-two fairs in the state I would place in the former class some fifteen to twenty, leaving in the latter seventy to seventy-five that have approximately reached their expected development as shown by the record. Now, of course, I am going to be very careful and not name to which class your different fairs belong. After you get home take the record of all the fairs and figure it out for yourselves. It will be more illuminating to you and much safer and possibly less embarrassing for me.

Practically, then, eighty per cent of our fairs show an almost equal yearly average in total receipts during a period of five years, weather conditions considered. It's on this large percentage of fairs where the receipts are less speculative that the budget can be utilized and the expenditures based on the average known receipts of each individual institution. There is no hope, there can be no hope, held out to the business man or institution where the expenses continually exceed the earnings. Particular emphasis should be stressed on this point for it is so easy and natural for fair managers to cross this line of safety. The management, of course, should leave nothing undone in the effort to excel and surpass, if possible, previous records in exhibits, attendance and receipts. That ambition is justified

and necessary and how pleasing it is to all concerned when the results compensate the management for their efforts. But granting all that I cannot forego the conviction to sound a note of warning against unnecessary extravagance, especially at a time when we are face to face with a new condition. While we may not like this new condition nevertheless it is here and we must meet it. To meet it successfully we must apply principles so far as successful management is concerned and they will be found to be the same principles that successful business everywhere has found necessary in the conduct of its affairs. That is the purpose of the budget.

It is said of the "Canny Scot" that he is not "stingy," but "careful" and in that light I ask that you construe my thought. I think its an axiom in business that goods well bought are half sold, and if fair managers forget this axiom and purchase recklessly and more than their people can buy or are at least willing to pay for it's not only a bad bargain but usually proves a costly one. For if you cannot sell your show to the people at a profit the venture is a losing one and an unsightly deficit springs up to stare you in the face for the balance of the year.

It's seldom any manager buys all he wants, but that should not be his motto. Better that he buys that only which he can reasonably expect to pay for.

Some fairs because of larger territory and bigger towns to draw from are enabled and expected to put on a big expensive show, while it would be rank suicide for others who are not so favorably situated to attempt so pretentious an affair.

Rivalry between fairs of these two classes will end in inevitable disaster for one of them. The years 1919 and 1920 were fruitful of record attendance and receipts and while we would all wish for their continuance it is very doubtful if a recurrence of such prosperity will again gladden our hearts for some time.

We are a rural people and fair patronage in Iowa is mostly from the farm and I think every one is aware that during this period of liquidation the farmer is the greatest sufferer. Bearing this in mind the wise manager will arrange the size and expense of his show so that it will be salable to his community, and by the strict application of the Budget System to the expenditures in relation to the receipts as based on the average total yearly revenue for a period of years prior to 1919, will enable the fairs to tide over and greatly lessen the effects of lean years if they should be in store for us, so that you will be in a position to take full advantage and function with greater glory in the fat years that surely await you.

President Hoffman: Gentlemen, we are honored with the presence of Hon. Henry C. Wallace, Secretary of the United States Department of Agriculture. Mr. Wallace intended to speak to us tomorrow but has been called back to Washington, and will talk to us this afternoon.

Mr. Wallace: Gentlemen, I am glad of an opportunity to meet with the Iowa State Board of Agriculture and the representatives of the County Fair Association.

I was interested in what the preceding speaker said of the relation of your county fairs to the agriculture of the state. He said very truly that the prosperity of your fairs depended upon the prosperity of the farm.

I presume that what you would like to hear from me is the conditions as we see them down there. I have not any prepared speech. I have made a few notes to talk to you on some of the different things that have come up down there in the way of giving an account of my stewardship to you people to whom I really owe my allegiance. I don't want to talk to you on the general depression of agriculture; you realize it here. I suppose at times you have felt it more severely out here than anywhere else. I want to say this to you that this depression is general through practically all the United States. It is true that some large sections have suffered perhaps more than others. The farmers of the east for example have not felt it so severely as in this great corn belt surplus producing section. There are two reasons for that. Their agriculture is more diversified in a way and they have not felt the full burden of the freight rate advance as you have out here; in other words they are nearer the market. Another reason for it, their land is not nearly as valuable, not worth nearly as much per acre. And there is still another reason: a good many of them, at least the territory to the south, are accustomed to take things very comfortably and have not been accustomed to push as hard to get ahead as we have in this western country. Throughout the south, the cotton producing section; throughout the range country of the west; throughout the small grain country of the southwest and northwest, this depression has been felt just as much as in Iowa. In the northwest conditions are even worse.

One of the first duties, practically the first duty laid upon me was to loan two million dollars to the grain farmers of the northwest, particularly Montana and North Dakota. Congress made the appropriation on March 3rd and on March 5th when I took office the first duty I had was to say how we would handle that loan. They simply turned it over to us to be paid out to the farmers of these sections to be used for buying seed grain and under such rules and regulations as we might prescribe. We loaned that to more than 13,000 individual farmers and got it all out in time for spring seeding. Now we are in the process of collecting it and I want to say to you in some parts of the northwest conditions are very, very serious. Many of these people are in actual want for food and for clothing and for the ordinary necessities of life. I am saying this to you not to try to paint a dark picture, but to try to make you see that the Iowa farmer is in about the same boat as farmers of other sections of the country. Naturally you want to know what we are trying to do about it, what we are doing about it there, and I think there is a feeling over the country that not all is being done that can be done or that should be done.

The first thing Congress undertook to do in the way of relief was the enactment of the emergency tariff. Ordinarily when we have a great surplus a tariff is not supposed to do so much good; the surplus itself ought

to constitute a sufficient measure of protection against the importation of the same sort of things. We had a most unusual situation; while prices here were ruinously low last spring yet we had a constant flow of stuff into this country. Wool, for example, furnishes a very good illustration. Wool was selling at a ruinously low price; we had a great surplus piled up, notwithstanding that we were getting over sixty million pounds of wool a month coming into the United States. The reason for it was simply this, that this was the only country that had a market at all and these people were sending it here because they could not sell it anywhere else. So the imposition of the tariff duty did help some and it has helped I think along other lines. The second measure was enabling joint stock land banks to get into business by allowing them to spring their interest rate on the bonds they sold without making the same advance in interest rate to the borrower and the decision of the Supreme Court which allowed them to get back into business, and this law which made their bonds more marketable, because at that time bonds were not as marketable as they are now, resulted in making large sums available as loans on real estate and helped to that extent. Another measure was the provision for the increase of the capitalization of the farm loan bank, authorizing the treasurer to spend as much as twenty-five million dollars so as to bring that capitalization up to the legal limit, and the farm loan banks as joint stock banks have been functioning. Within the last three months farm loan banks marketed sixty million dollars of bonds at par. Captain Smith of that board tells me he anticipates no trouble marketing at least twelve million dollars worth of bonds in a month, which means spending that much in loans on farm mortgages. Then the act which amended the war corporation law and which empowered that corporation to immensely extend its loans has been very helpful. Up to last month some sixty-five million dollars, if I remember rightly, of money had been loaned for export purposes, and under the new powers given by the law enacted by Congress probably seventy-five million dollars—I am not undertaking to quote the exact figures,—have already been loaned for relief within the state. Now I understand that there is a feeling that that money has not gotten down to the individual farmer as rapidly as had been hoped for. There is a feeling also that the corporation might properly loan to the individual farmer. I don't think that feeling is entertained by anyone who understands the difficulties of such proceeding. It is simply out of the question for the corporation to undertake to deal with the individual farmer here and there. It is impossible to set up a machine short of years that could function in that way. The money has been helpful in this way, that it has been gotten out to relieve the stress of the banks in the agricultural districts, and the process of getting it out is being simplified just as rapidly as possible. We have got a tremendous organization back there now and putting in large numbers of additional men, and the machine is being brought into action more rapidly than those of us who were in close observation of the work had even hoped, and as time goes on, especially if the bankers themselves avail themselves of the opportunities offered by that act the results cannot help but be very helpful in relieving this whole situation of agricultural credit stress. Those were the laws which Congress enacted looking towards relief

of the credit situation. I think they have been more helpful than people generally realize.

In addition to these laws they enacted a law which for the first time brought the packers, and the stock yards and the live stock commission merchants under Federal supervision. That law is now in force, but part of it is being held up temporarily by an appeal to the courts for the purpose of testing the constitutionality of the law. The appeal has been made by the commission merchants. There were reports when the law was enacted that the teeth had been taken out of it, that the amendments adopted by the Senate had almost emasculated the law. There is nothing to that kind of talk at all. It is a very strong law. It gives all the supervision and all the power that anyone who is sensible of his responsibility under it cares to exercise to begin with. It gives power to go in and examine that whole business, meat packing and live stock marketing, all along the line and if it stands the attack now being made upon it, within a year or two we will be able to speak from accurate knowledge of the conditions affecting live stock marketing and meat packing. It gives the supervising agency authority to go so far as to fix charges in the stock yards and fix commission rates, authority which has never been given over any large business except in times of war.

As I say the commission merchants have attacked the constitutionality of the law on the ground that they are not interstate agencies and that therefore Congress has no right to impose restrictions which that law imposes. The case comes up as a test case from the Chicago yard. Every time we have one of these periods of agricultural depression there are always large numbers of people who attribute low prices very largely to the operations of the boards of trade. All of us practically here can look back to the depression previous to this and remember this same sort of agitation. There has never been enough exact knowledge about the operation of these future exchanges to justify such legislation as has often been proposed and certainly no knowledge which would justify putting them out of business forthwith as some people think should be done. The act which Congress passed gives us the same sort of authority over the exchanges and very much the same authority that the packing and stock yards act gives over the packers. It gives us authority to go in and examine everything that is going on on these boards of trade; to study the effect of future trading on prices; to go into the books of every individual concern. We have authority to require them to make such reports as we think are necessary to enable us to get at what is going on there, and if that law stands up within a year or two we ought to be able to express an intelligent opinion based on solid facts as to the effect of future trading on these open exchanges. That law also has been attacked by a small group of traders on the Chicago board of trade who are attacking the constitutionality of the law, and on much the same grounds as the attack on the packer law. The Supreme Court yesterday issued a decree which suspends in part all activities in enforcing that law and then has set the case for hearing on its merits on January 3rd.

I am speaking of these things to try to make it plain that the people in Congress have been trying sincerely to do whatever seemed to be practical

to do to help this whole agricultural situation. I think there is no well considered measure that seemed to be practical which has been proposed there which has not met favorable support and which will not become law.

There are two matters pending which I assume will be acted upon favorably. One of them is to clear away the obstructions to the formation of farmers' co-operative marketing organizations. As you know, now and then in this state and the other state the officers of such organizations have been arrested by over-zealous local attorneys on the ground they were a combination in restraint of trade, and this law is designed to take away any excuse for that sort of thing. It has passed the House and is on the Senate calendar and I assume will be acted on at an early date. The other bill is a proposal to put agricultural representation on the Federal Reserve Board, and that grows out of the feeling on the part of a large number of people that the policy of deflation which was inaugurated by the Board a little more than a year ago has had a disastrous effect upon agriculture and has been in considerable part responsible for the severe drop in agricultural prices without corresponding drop in other prices. What will happen as to that law I do not know. Naturally the bankers feel that the Federal Reserve Board should be composed of bankers, it is to administer the credit machinery of the country and only men of wide banking experience should be on it. On the other side of the question they point to the fact on the Bank of England Board there is not a banker, it is composed of representatives of the various businesses and industries, and that the administration of the credit machinery in that country is with due regard to all industries and businesses. Clearly if the federal reserve board is to be a board simply to administer credit, without undertaking to administer that credit in a way to influence business, then it is a bankers business. If on the other hand it is to be the sort of an institution which undertakes to encourage or depress business according to its judgment, then I think the argument is good that representatives not only of agriculture but manufacturing and labor and other business interests should have a seat on the Board. That matter is going to come up for discussion this winter and it will be a very interesting discussion.

So much for what Congress has done. And I want to say again that if Congress has not done more it is not for lack of desire to do more to solve this whole situation. The difficulty has been to determine what is the practical thing to do, what will work, what will do more good than harm. That is the difficulty of the whole affair. It is not an easy matter to bring about all at once a condition of prosperity following such a period as we have been through. Here we had thirty million men in the field with guns in their hands set to work to kill one another; taken from the walks of business. We had practically all the civil population of the world working and planning for that war work and to support these men in the field; a complete disorganization of all our ways of doing things up to that time, and you cannot expect in going through a period such as this that there is not going to be some disturbance in getting these men back and started again in the walks of business.

We must take to ourselves a good deal of the blame for not anticipating such a thing as has come upon us; and we are to blame here in Iowa as we

are elsewhere. Haven't you men in this room heard men talk two years ago that you would never see low prices of grain and live stock in Iowa again, that we were on a permanent war level of prices and you would never see cheap food again? You heard men talk also, not only farmers but bankers and business men, that Iowa land would never stop until it went to a thousand dollars an acre. I heard that. I talked in twenty different counties in Iowa in the spring and early summer of 1920. I tried to talk and say what all scholars and economists said, prices were on a war level and we would go through the same period we had gone through after every war, and they used to say to me: "Wallace, you are all right, but you have got this thing sized up entirely wrong. This land won't go back again, it is never going to stop until it gets to a thousand dollars an acre." I think all of you have heard the same kind of talk. I see no use in bemoaning a fact, but I say we ought to have seen something of this severe period of restoration which has come upon us, we are in part to blame just as everybody else is; not any more to blame than other people for not anticipating some of it.

Now I want to tell you what the Department of Agriculture tried to do. The Department of Agriculture for forty years has been seeking increased production. We have searched the world for new plants and animals. We have studied in every field of scientific research for ways of cheapening production, increasing production, to produce better. The Department had not given the same attention to what I call the business side of farming; had not studied the economic side, and it seemed to me that side of the department work needed strengthening. Very shortly after I went there I began to strengthen that by combining various economic units in the department, getting them together where they knew one another's work, one man knew what the other man was working on, was given inspiration working together. I sent men over the seas to look into the foreign market. Our trouble we all said came from two causes: first, we had stimulated production as a result of war demand in the hope and in the expectation no matter if peace did come there was the starving world overseas to take all we produced at a good price, and then we felt when peace did come and these people did undertake to come back to normal times, they did like every sensible man did in his own business, they found they were about broke and they said "we won't buy anything that we don't have to buy, we will wear our old clothes. We will not eat more than we need and we will go to work and pay off these debts." So our foreign demand decreased while our production had increased and our costs of production were the highest ever known.

Then the trouble came to this country and our industries began to slow down, men were thrown out of work, our consumption at home decreased, so you had a situation where forty per cent of our people depending on agriculture were selling their products at far less than cost of production and are still going down to pre-war prices, while things they had to have maintained a war level. I sent men overseas to seek cotton exports, meat exports, grain exports and other products to see where we could sell our stuff. People had been saying all we needed to do was to give these people credit and they would buy our stuff. We found that was not true.

There was no way by which we could extend credit and get business and increase materially the stuff we sold overseas. Those people were doing exactly what we were doing here. The markets were full and they were not buying as they had done in days past, buying and storing there, they were buying a hand to mouth market, they didn't want to take any they didn't need in the next two or three weeks. That is exactly the same thing each one of us did.

I think our investigations overseas have been helpful; they will be especially helpful to us in the future. We have not been able to greatly stimulate our sales over there although I may say this that until the last two months our exports of agricultural products have been very, very much above exports in years just preceding the war. And until these people get back on a pre-war basis and especially until they get their financial system stabilized and quit printing money turned out on the printing presses, until they stop doing that we must expect a slow trade from over there.

Then at home as I say I have reorganized the economic work of the department with a view to not only study this present emergency but looking into the future and trying to anticipate such periods as this or less severe periods, and guard against them. I feel very, very deeply that if our department of agriculture and our agricultural colleges and our farmers' organizations had given even a half as much study to the economics of agriculture and the things which influence prices and the operation of the law of supply and demand and kept in touch all the time with foreign production and foreign consumption and various factors influencing the demand for our products—if they had given even half as much thought to that as they gave to increased production, we could have anticipated in large part this trouble that has come upon us. I think that our whole method of agricultural education and work of the experiment stations and work of the federal department of agriculture itself and the work of your state boards of agriculture have got to be reorganized and reconstructed with a view to getting an understanding of these great fundamental forces that influence agricultural prosperity. We find ourselves just in about the same situation the people of Paris were in when the shells of that great gun began to fall; they didn't know where they came from, didn't know what was hitting them, and it took them a little time to find out and locate it and see where the trouble was. We have been in about that same condition in this period of agricultural depression; we haven't been able to size up our trouble, see what it was hitting us. We have gone through three of them in my life time and we have come out of every one of them without realizing or knowing what was behind them, and studying the business side of agriculture.

I hope we will not come out of this without fully appreciating the importance of marketing our crops intelligently, of adjusting production to the needs of consumption and the study of all the factors which influence production and price, and if we have learned that lesson from this then the experience will not have been wholly lost. Now looking toward the future, we are going to come through this emergency, we are going to be hurt some, but the world is going to settle down and pre-war condi-

tions will largely be restored, and when we get through this as I see it we are facing an entirely new period in American agriculture. Heretofore the young man who got a tight hold of a piece of land and had enough money to buy a very modest farming equipment and had a good wife and who had in him a capacity for work, was almost certain to get ahead. He had to economize; he didn't make money one year with another on his farm operations, but that piece of land was steadily increasing in value and he could see that. He could afford to economize, he could afford to live almost penuriously because he could see he was getting ahead through the advance in that piece of land. Now we have taken up practically all of our easily tillable land. We have millions of acres which can be brought under cultivation when conditions justify, and especially when prices justify, but all of the easily tillable land has been taken up and we have come to a period now when we have skimmed the cream off of the advance in land. We have come to the point where we cannot expect these rapid advances. We have come to the point where the farmer cannot afford to lose money in his farm operations with the idea he is going to get it back through increase in value of land, because the value of land will not increase rapidly enough to enable him to do that.

So as I see it we are coming now into an entirely new period in agriculture where farming has got to be put on a solid business basis just as any other business and where one year with the other the farmer can be able to make a fair profit in addition to interest on his investment, and it is going to take the combined wisdom and judgment of the best informed men in this whole country to maintain our agriculture under those conditions. We have loaned foreign nations ten or eleven billions of dollars. I say we have loaned it in dollars. As a matter of fact we have loaned that much value in commodities. There is not enough money over there to pay even the annual interest charge on the money we have loaned them which means that if they pay back these debts they have got to pay them back in the same form in which we loaned them, in commodities of one sort or another. That means our manufacturing industries are going into a period of the most severe competition, and all the more severe because of the disparity of the money values of the United States and practically all foreign countries. This is a good country to sell in, not a good country to buy in. That means our manufacturers are against the most severe competition they have ever experienced. To meet that competition they have got to reduce production costs in every way possible. That means they are going to demand the cheapest possible food. They are going to insist on their grains and live stock products to be just as cheap as they can possibly be furnished, and they are not going to be particular as to where they come from.

Then you take the third factor; down to the south of us is a great agricultural empire, Argentine and Brazil and Uruguay constitute a tremendous agricultural empire. In Brazil they can grow anything we grow in Iowa and in addition grow a lot of tropical products we can't grow. Shipping rates to these South American countries going to our consumption centers along the eastern coast and for 250 to 300 miles this side are lower than the shipping rates from Iowa to those same points. Now you take

these three or four circumstances which I have indicated, and I say that they challenge the very best thought of our ablest men both on the farms and in the cities, because when all is said and done our national prosperity is dependent upon our farm prosperity; forty per cent of our people depend on what grows on the farm. That forty per cent, because of this present condition, their purchasing power is reduced and the effect is felt upon the remaining sixty per cent. We have come to the time when we have got to check up carefully on our marketing as well as on our production of agricultural products. Speaking of Iowa in terms of Iowa, seems to me the challenge comes up squarely to the State Board of Agriculture, to the State Agricultural College and to all other agencies interested in Iowa agriculture, including bankers, merchants and every citizen of Iowa,—because we all know Iowa is an agricultural state, the basis of our prosperity is in the Iowa farm, and it presents a problem which must have the most careful attention of all citizens of Iowa.

This tendency for the farmer and business man to regard their interests as antagonistic has got to be overcome if Iowa meets this problem ahead of it in the next twenty years. We have here thirty-five million acres of the most valuable land in all the world. Nowhere in the world is there thirty-five million acres lying in one body that equals in value of fertility the thirty-five million acres in Iowa. We have in Iowa the most intelligent farm citizens that can be found in any similar body of land in the world. Nowhere can there be found the same number of farmers having the capacity for large production and intelligent production. The problem is to organize this whole thing, reorganize the process with a view to the future. It is a problem I think the State Board of Agriculture, and you gentlemen interested in the county agricultural fairs must take to yourselves seriously. There is not any question about our coming out of this period. As I say, some of us are going to get hurt. The problem is not this emergency now, because I think most men who are familiar with all conditions which are likely to affect us now are agreed that we have reached the bottom. We may have some temporary depressions in the price of corn and some other crops, but we have a right to assume we have turned the row and are headed now towards better times. The problem is not alone this present emergency, it is a problem of the future agricultural policy of Iowa. It brings with it the challenge to every man who loves his state and loves his fellow citizens here. I would like to see the Iowa fair men and Iowa State Board of Agriculture take the lead in this. I would like to see them in a reorganization and directing of the various agencies which are standing for better agriculture. I would like to see you set up a state marketing organization which would enable us to market our crops more intelligently than we have.

The day I left Washington the manager of the Co-operative Fruit Growers of California was in my office. I said "Well, how have you done this year?" They handle mostly oranges. Oranges are a luxury. These Co-operative Growers of California marketed their oranges and made a profit on their production and on their marketing. It simply came about by attacking that marketing problem as a business organization, and does its marketing intelligently. They grade their fruit, they don't market poor

stuff, they throw it out. They have a co-operative lumber mill up in one of the California forests where they make their own boxes. They have inspectors all along the way. They operate their own refrigerator cars. They study the demands of the consumer in every large city. They do not flood the market of one city with oranges. They start a car east and they direct that car wherever they find the market for oranges is likely to be good by the time they get there. If something happens before they get to that destination, the market goes off, they stop it and send it some place else. In other words they apply business principles. In all frankness we have not done that, and have not made intelligent organization in Iowa. We have got to do that if we maintain Iowa agriculture as we must maintain it. We have got to get the Iowa farm on a basis where it yields a fair return in the money invested in land; where it yields in addition to that a fair return on the working capital; where it yields in addition a fair labor return to the man who farms, to enable him to live decently, maintain his schools and churches, maintain his lodges and bring up his children and give them educational advantages and social advantages, to take care of his wife and give her home conveniences she has a right to demand and at the same time maintain the fertility of Iowa land for the generations to come after us.

President Hoffman: I am sure we all appreciate Mr. Wallace's talk. We have all been good listeners. We will now go on with the program. Mr. Corey will talk to us on the Budget System.

Mr. Corey: Mr. Chairman and Gentlemen of the Iowa Fair Managers Convention: I assumed, when I was placed on the program with Mr. Mullen to discuss the subject of budgets, that he would cover the matter thoroughly, and I now feel that I was justified in my prediction.

This subject of budgets is one of considerable interest and of great importance to all fair managers at this time. In analyzing the financial reports of the Iowa county and district fairs, for the past year, I find they have encountered the same difficulties as the state fairs, Iowa State Fair included. The Iowa fairs, as well as the fairs of the whole country, have been riding on a wave of prosperity up until the year 1921. During the year 1921 the fairs truly reflected the financial conditions of this country. The apparent slump in attendance and receipts from an average or normal was not as great as we might at first think it was.

If you will eliminate the two abnormal years of 1919 and 1920, for the sake of comparisons, you will find the fairs had a fairly prosperous year in 1921. The trouble with a great many fair managers the past year was that we did not anticipate that the attendance and receipts were going to return to normal quite as soon as they did, and for this reason not many fair managers trimmed their expense budgets to fit the income.

I was very much interested in the report of the statistical committee of the International Association of Fairs and Expositions made to our convention in Chicago on November 30. This report showed that the attendance and receipts of practically every state or interstate fair in the United States showed a falling off. One fair showed a reduction in receipts of 49

per cent and several between 30 and 40 per cent. I wish to add here that your own state fair, according to this report, stood second only to the Minnesota State Fair in receipts, attendance and cost of operation, and paid out in cash premiums \$7,563 more than any state fair in the United States.

Referring to the reports of our ninety-two county and district fairs, we find that the expense of conducting these fairs in 1921 was \$1,223,072.66. This sum does not include \$30,772.44, the cost of maintenance of grounds and buildings, which in the end should be either added to the operating expense or deducted from the profits. The expense of operation shows an increase of about \$8000 over 1920 and there were three less fairs held. The total receipts of the fairs, including an increase of \$44,677 in state aid, were \$1,275,802. This was a decrease of \$141,802 as compared with the receipts in 1920. The net balance on hand at the close of the year, of all the fairs, showed a decrease of \$102,643, and the interest-bearing indebtedness was increased \$175,481.

These figures are not quoted as a criticism of the fair managers, but I do want to bring out the point that fairs in general have been spending too much in putting on their fairs and should reduce their expense in conformity with the reduction in attendance and receipts, which is almost certain to continue for the next few years.

This is where the budget system can be used to work out your problems. By eliminating the prosperous years of 1919 and 1920, and taking 1918 and 1921 as a basis for anticipated receipts, you can estimate somewhere near what your income should be the coming year. The budgets should be made up to come within the anticipated income. Budgets should be made up for attractions, advertising, speed program, premiums, pay rolls for all departments; in fact, every department of the fair should be on a budget basis if you hope to hold down the expense. These budgets can be worked out by the secretary or a committee with the co-operation of the superintendent of the department and, when once adopted, should be religiously adhered to.

UNIFORM ACCOUNTING

There is one other matter that I was supposed to touch upon that, in a way, will be of help in working out the budget system in future years. That is the suggesting of a uniform accounting system for the fairs. I realize that a great many of the county fair secretaries are business men and do not have the time or the necessary help to keep an elaborate system of books. I assume that what most of you are looking for is a simple system that will enable you to keep an accurate account of your receipts and disbursements properly classified with a minimum amount of work. The system I would suggest is what is known as a special column journal and ledger combined; one for a record of the receipts and one for disbursements.

As suggested by your program committee, I have worked out and had printed a sample showing one opening of each of these journals. The original entry in the journal of receipts is made direct from the receipts written either by the secretary or treasurer. The entries in the journal of expenditures are made from the voucher or check stub. This system is

used by a great many state fairs and has been found satisfactory. It is also used by a great many county fairs in some of the eastern states.

I do not believe this is the time or the place to go into detail as to the method of keeping these books. Sample openings of each have been provided for distribution at this meeting. I would be glad to have the secretaries secure a copy and make any suggestions or criticisms for improving the system. I should also like to make the suggestion that if the system appeals to you, that the secretaries club together and place an order for a number of books at the same time, and in this way secure a big reduction over the cost of a single book. I think you understand that the cost of ruling and printing one book would make it a rather expensive proposition, but by clubbing together I am of the opinion that a satisfactory price can be secured.

President Hoffman: The next on the program is "Relations of the Farm Bureau with the County and District Fairs," by Mr. E. H. Cunningham, Secretary Iowa Farm Bureau Federation.

Mr. Cunningham: Mr. Chairman and Gentlemen of the Convention: You have assigned to me a subject which is in regard to the relationship of the Farm Bureaus to the District Fairs. The interests you represent and the interests that are represented through the farm bureau are identical, and there should be a relationship there without any question so that it would redound to the benefit and bring good results both to your interests and the interests we represent through the Farm Bureau Federation. I listened to Mr. Wallace quite attentively, a very interesting talk, and yet there are some things I anticipated he might touch upon that would put a little hope into us here.

He has put the proposition up to us to meet the situation that confronts the farmer here and our interests in this state, but we are looking to the leadership to suggest a way out. I have been to Washington four or five times looking for something. They are all in the dark down there, they don't know any more about that situation, it is my opinion they know no more about the cure down there than you men do down here. There is only one thing to it in my mind we have reached the bottom probably, consequently feel better to think we have got no further to fall, have got to the end and probably going up. We have read a great deal about it, getting back to normalcy. I will tell you in my own humble way we won't get back no matter what men say on the subject, notwithstanding the articles you read by different economists, whenever you see these farmers out here selling products off the farm for what it costs to raise them and a little bit more as profit, then we will be getting back and not until that time, gentlemen. That is the proposition that confronts this country. I know you men are interested in it the same as I am. Mr. Wallace told us that we can't expect much from Europe. Gentlemen, we have got a wonderful surplus of corn here in this country and we have got to get rid of it. They tell us not to burn it; they are economists. What is the next proposition? Through the co-operation of the farmers of this state they put 1,300,000 acres of this land into corn the last four years because the government asked them to produce more, a twenty-seven and a half per

cent increase in 1917. You are all familiar with how that was done, because they had a larger yield and better farming, they broke up pastures and hay land and answered the call of the government and they fed the people of this world while the boys went to war. That condition still exists and that land is still in corn. As a business proposition, I would not want to suggest any condition that would cut down production, I would not suggest this as a method of curtailing the food supply of the world, but as a business proposition that it is only proper for these men to turn that 1,300,000 acres back into grass and let that lie idle when you know and I know the farmer will reap a larger return today from that pasture for the good old cow and will realize more from dairy products than he can possibly from his corn at present prices. They say it would be a waste to burn corn. If I lived out a great ways from town,—I would not say for a state to advocate burning food stuff, but I would leave it with the individual what to do with that surplus. They say that is not sound economy. I don't know a blamed thing about economics. If economics control this business let's burn our economics and get down to sound principles on this proposition, something practical.

On the question of relationship, you can answer that better than I can. Out there in the country Farm Bureaus are organized individually in each county. If you ask me what they should do I would say there should be close co-operation. The Farm Bureaus are there to help in any way possible the farmer in his problems and with his problems and the fair is there to show him how he can advance his own interest, it is an educational institution, you call it that, you want it to be that. It is true you have to have a balanced program, you have to entertain people as well as educate them. People condemn you for doing that thing. I don't entirely, I like a little fun. I used to like to go and see the horses go. Late years I have not seen so much of it. But you have to have these entertainments. I think you could well pattern after the state fair program that the Farm Bureau has put on in these county exhibits they put out here. These exhibits out there are popular, very popular, we find them so; they are educational; they show you what the products of the state are. Why not take the counties and take each township in each county and get them to compete a little bit on this proposition and put up a nice exhibit there at the fair.

Why not have a demonstration plot out there and demonstrate the kinds of soil fertilizers and especially this question of limeing Iowa soil so you can better grow the legumes. Two years ago this coming spring I sowed twenty acres to alfalfa. I never saw that seed, it never did come up, absolutely saw nothing of it. Someone said the soil is sour, give it lime. A year ago this spring my boy limed that, fertilized that twenty acres, and now I have got the best twenty acres of alfalfa in Iowa. That is educational. I think you could get up an educational plot.

In your relationship with the county Farm Bureau why not get together and co-operate in the way of making greater use of this club work? The very stability of this state depends upon whether you can keep these boys and girls interested in this game that is so disastrous and distressing at this time. That I think is a very good line of work for you men to

follow. Encourage it, put up your prizes. I can't tell you how to do it. You men are experienced along that line. I have had men come to me a hundred times and tell me how to run the state fair; I have been told by a thousand different ones how they could make a success. When I get out there and see the multiplicity of attractions and departments, I make up my mind these men who are actually responsible for this, getting that thing going, having it fixed and getting it out and all over in ten days is absolutely a science far far beyond me. That is the fair man's business. I don't want to tell him how to do it. The fair business is your business, you have the same thing in each county. A man has to be a genius to make a success of a fair. I am satisfied nothing could come between the county agricultural fair and the Farm Bureau, that your interests are in common. You should co-operate, and I am sure if I can help you I will be glad to do it.

I would like to answer to some extent things brought up by Mr. Wallace, —not answer them but second them. One is marketing. He suggested that these farmers must take hold and we must take hold of this question of marketing. No question about it. Every one of us that own a piece of land have known that every school house built, every road built and every kind of improvement in the community or on that farm added to the value of the farm continually, but we gave but very little consideration to this question of marketing. We were speculators in land until it reached a point where we can't expect any particular advance or any great advance in these lands, then the old speculative income value of these lands ceased. How many of you want these lands at their present income when you get down and figure this investment or what the value is. That is the proposition that faces the farmer like a stone wall, and we are not going to move again in this state until the farmer gets his expenses on a par with his income, when he is able to show a profit on his investment. Somehow he keeps things going but he must get back to the basis now where he is going to give consideration to his earnings from that farm, to the income that farm produces.

And these booms we had two years ago, I think the experience most men had with that boom two years ago it has brought them to their senses at this time, and it is a question now whether anybody is going to get away with any velvet on that proposition, and here is that mortgage that has got to be lifted; how is he going to get it out of 25 cent corn and 20 cent oats. The question is solve this proposition so this product will bring what it costs to raise it; if we don't how long do you expect the thing to continue. In Iowa men are optimists. I am an optimist, so are you. After the war it took eleven to thirteen years to get back, after the civil war, from the high point of prices and cost of production to the lowest, and here after fifty or sixty years of civilization and progress and development and enlightenment we had a war and with all that intelligence and with all that wealth and the stability of thought, large enough for the settling of the difficulties of the world, we come back home and we fell off of the roof, went back from the very peak of production of prices and cost of production to the very depths in six months. It merely shows that we have been altogether too much going on as individualists, all grasp-

ing and grasping for our own and reaching out for more. You have got to get a broader vision on this proposition if Iowa agriculture is to come back where it belongs. Iowa is not going down.

You can take these things back right to the farmer, he is discouraged, he has a right to better things. He will come to your fair and see some of these things you have there for him, there won't be any side show attractions at your fair, we have cut them out. We are trying to work out that market problem. We are going at it sane and safe. The Iowa Farm Bureau is not trying to destroy any industry or any interest in this state. If things go right for the farmer he is trying to build a better plan. The farmer must take hold of this. He is justified in going to any length until he finds a better market for that crop if he can, build a better plan, a stabler plan, one not by speculation as to valuation, but giving a better market for the crop he has; he is not only justified to do it, he is in duty bound to do it. Now forty per cent of the wheat crop is on the market by the first day of October; out of the farmers' hands; he needs the money. Money won't cure the situation, not now; money will help him, it will carry him over, but he has got this stuff all sold and shipped to market. Whenever the farmer is reasonably prosperous that prosperity will reflect itself everywhere.

President Hoffman: The paper "Concessions for County and District Fairs," by Mr. F. B. Selby, Secretary of the Wayne County Fair will be read by our secretary.

Assuming that all county and district fairs are conducted for the purpose of instructing and entertaining the people with the incidental purpose of making a profit with which to extend and improve our fair grounds; it follows that funds must be provided to pay for these means of instruction and entertainment.

Our races, free acts and other features of instruction and entertainment cost money, pay nothing directly to the fair yet are featured and advertised at considerable expense and undoubtedly are the features which bring the money to the gate.

Our concessions, properly handled, contribute to a considerable extent to the comfort of our patrons and bring in quite a revenue.

A good bunch of concessions on our grounds accommodate the people by providing the various refreshments which seem to be a necessity to every pleasure-seeking gathering of Americans; the games, rides and shows furnish amusement to many who do not seem to be attracted by anything else, while the holiday spirit is awakened in all by the sight of the imposing Ferris Wheel, the gaily decorated doll racks, the banners in front of the side shows, the smell of the frying hamburger and fresh roasted peanuts and popcorn, the blare of the merry-go-round organ, the cries of the vendors of whips, balloons and canes and the bally-ho of the side show barkers.

All these are sweet to the seasoned fair goer and put him at once in a proper frame of mind to enjoy what he has paid us for.

Now that we are in accord regarding the advantages of concessions, the discussion must be regarding the unpleasant features and how to avoid them.

The opening statement which I shall make I have no doubt will cause discussion and I fear I will not find a champion for my position; it is this:

The unpleasant features of concessions at fairs are largely the fault of the fair management or concession superintendent.

If an objectionable show or game comes to your fair, it is your fault, if the stands are not kept in an orderly and sanitary condition, it is your fault; if you have constant trouble with your concessions about conditions, it is your fault; in fact I do not know of any of the unpleasant things which occur with our concessioners which might not have been avoided by the observance of a few precautions *at the time of making contract*.

Concessioners are, as a rule, fair minded and reasonable men; out to make money in, what seems to us, a very hard way; but they understand business methods, know their rights and yours and when they are impressed with the fact that you're doing business in a business way and are giving them a fair deal and will insist on the same from them, you will not have any trouble with them.

A great part of the trouble arises from misunderstanding. Do not have any. Put every agreement in writing and be absolutely sure that the concession superintendent and concessioner understand the contract. Do not leave anything to be settled at time fair opens or at time of payment. Close the deal when contract is signed.

We have concessioners who have been with us at every fair we have held and have been of great help to us in many ways; yet each of these signs a contract in which every agreement is plainly written.

Let the contract state just how much space is allotted, its location (which should be marked on plat showing relation to entrance and other points of interest on the grounds), what charge for lights, water, policing, etc., what you agree to do and furnish, the amount to be paid and the exact time of payment and I repeat, be sure that the concessioner understands exactly what he is to get and the amount to be paid and the time of payment.

Then do with him in every respect exactly as you have agreed and you are then in position to insist that he shall do the same. He has nothing to argue about.

It is well to make a trip down the line about the time the boys are setting up, note how the set is made, see that they are on the proper spot and properly lined up. You will find that this is appreciated and in many cases will save trouble later.

When the time for making collections comes, be as punctual as a clock. See that your collector is on the job at the very time the payment is due. Do not permit him to argue in regard to any grievance the concessioner may present to him. His business is to get the money. He has no authority to settle disputes. Let him report to you.

When the report is made to you, go at once and settle the matter then and there. You have either furnished what you agreed or you have not.

If you have not, *make it right*; if you have, *get the money* or cancel contract.

Always settle for amount specified in contract. By this is meant: do not "*make right*" something you have failed to furnish by reduction in price; but furnish what you have agreed and collect full price. Any other kind of a settlement will make trouble with other men on the lot.

Here is where your written, signed and perfectly plain contract wins out.

We have found that at a four-day fair it works well to make the payments: One-third cash with contract, one-third on second day of the fair and balance on third day of the fair. This gives the boys first and second day to make second payment, the third day which is usually the big day for third payment and the fourth day for them to take in their get-away money and you to settle with the lame ducks, if you have any.

While amount we collect from concessions is not so large as many of you have, we usually have all collected at close of third day; this season we had every dollar.

It has been suggested that some plan should be devised by which all money for concessions would be paid in advance. There is no room for difference of opinion along this line. Such a plan would be ideal and make the life of the concession superintendent a bed of roses; and while I hope that the discussion may result in devising some such plan, for my part I am of the opinion that it is impossible. It would require more capital than most of our concessioners have to contract for season of say ten weeks and pay in advance. If they had that much money, they would not need to be on the road.

It is true that we may sometimes hold a spot for a man who has made first payment and fails to come, sometimes a man blows after the second day; but these are chances we must take and under normal conditions there are usually applications for space on second day of fair sufficient to take up these defaults.

It might be worth while to make contracts with those who contract in advance at the usual terms and require payment in full from those who drop in after fair opens thus stimulating advance contracts.

The Wayne County Fair and possibly others would appreciate having the representatives who have tried them give their experience in regard to carnivals at county fairs. Do they interfere with sale of other concessions? Do they please your patrons? Do they pay? Do you have any trouble in keeping them from putting on immoral shows and games of chance? Our directors do not approve of them yet we know that some good clean fairs have them. We want information.

Another thing which, in my opinion, would add to the entertainment and increase revenue at our fairs is good clean pay shows. We have not been able so far in our career to connect with anything of this kind worth while. We have too many refreshment stands and games and not enough shows. Folks can't eat all the time, they soon get enough kewpie dolls, some do not care for the rides and most any kind of a show except a snake show would be welcome.

It is to the credit of Iowa Fairs that the class of entertainment furnished and amusement offered is clean and we should always keep that in view in contracting our concessions. Our patrons pay for them just as they pay for our free acts and races and are entitled to just as high class goods. No one thing will do a county fair more harm than a lot of disreputable concessions on the ground. Our reputation is behind any concession we allow on our grounds. We advertise our free acts and races and our patrons may know what we have before coming to the fair but they do not know, say from the reputation of the fair, what will be shown on the midway.

We call ourselves educational institutions and should not offer to those who come to us for instruction anything which is degrading in its character.

We invite children and young people in particular to attend our fair and what we offer them should be entertaining but must not be in any way immoral or suggestive of immorality.

We must keep our concessions so that we may say to our patrons: send your children and young men and young women to our fair; there you will find much to instruct them, much to entertain, but nothing in the way of entertainment or amusement that will not be in every way proper and right.

There you have the job of the concession superintendent. He must get the money. His directors insist on that. He must get a variety of entertainment for our patrons. He cannot sell enough refreshment rights to pay out. His directors will not stand for a carnival company. His fair is not large enough for the big shows. He loses state aid if he permits games of chance. The county attorney of his county says that any game, even of skill, giving cash prizes is a game of chance. He must keep in the good graces of the concessioners. He must get the money. Does he earn his salary? You tell the pop-eyed world he does.

President Hoffman: The next is the election of officers. Nominations for President are in order.

Mr. Stanbery: I wish to place Mr. E. S. Estell in nomination for president. Now if there are no further nominations I move that the rules be suspended and the secretary instructed to cast the unanimous vote for Mr. Estell as president for the ensuing year.

The motion was seconded and prevailed, the secretary cast the unanimous vote for Mr. Estell and he was declared elected as president for the ensuing year.

President Hoffman: The next will be nominations for vice president.

Mr. L. W. Emery, of Spencer, was nominated and there being no other nomination a motion was made, seconded and carried that the secretary cast the unanimous vote for Mr. Emery. The secretary

having cast the unanimous vote, Mr. Emery was declared elected vice president for the ensuing year.

President Hoffman: Nominations for treasurer are in order.

Mr. Roy E. Rowland of Oskaloosa was nominated and there being no further nominations a motion was made, seconded and carried that the rules be suspended and the secretary be directed to cast the unanimous vote for Mr. Rowland. Such vote being cast by the secretary Mr. Rowland was declared elected treasurer for the ensuing year.

President Hoffman: The next is the office of secretary.

Mr. J. P. Mullin: I would like to place in nomination Mr. Roy Wilkinson, of Alta.

No further nominations being made it was moved, seconded and carried that the rules be suspended and the secretary be instructed to cast the unanimous vote for Mr. Wilkinson. The secretary having cast the vote, Mr. Wilkinson was declared elected secretary for the ensuing year.

President Hoffman: Our afternoon program is completed and if there is nothing further at this time we will adjourn until 6 o'clock this evening.

BANQUET SESSION, TUESDAY, DEC. 13, 1921, 7:30 P. M.

President Estell: Gentlemen: They have asked me to act as toastmaster here this evening. I am pleased to introduce to you the Honorable Mayor H. H. Barton, of Des Moines, as the first speaker this evening.

Mayor Barton: Mr. Toastmaster and Members and Friends of the Iowa Fair Managers Association: In the last year Des Moines has had the privilege of entertaining many gatherings, we have had many conventions, but I assure you that none of them were more welcome to our city than you are tonight. Coming as you are from the various parts of the state and being representatives of the agricultural interests of our great state, and looking you over as I do I am sure that those interests will be well taken care of by you men. It is a great pleasure to welcome you to our city and I assure you that during your stay here I hope it will be a pleasant one to you and that your deliberations will be profitable. I welcome you and greet you to our city.

President Estell: Honorable Mayor, I can assure you that I express the sentiment of every member of the Iowa Fair Managers Association when I say we deeply appreciate the hearty welcome

Des Moines gives us through your words here this evening. I believe, gentleman, that this is the fourteenth annual gathering of the Iowa Fair Managers in Des Moines. The men who came here on this fourteenth event came with an anticipation greater than any they had ever had before because they knew of the greater welcome and hospitality that greeted them here. I again thank you Honorable Mayor in behalf of our organization.

This afternoon we were favored with a very excellent address by Hon. H. C. Wallace, secretary of the United States Department of Agriculture, and you will remember in that talk he mentioned the necessity of the farm and the city working together. We have on our program this evening a gentleman who represents an organization here in this city that is doing that kind of work. They have not been doing it long but I understand that they are getting along very nicely. I am pleased to introduce to you Joseph F. Leopold of Des Moines, general secretary Iowa State Chamber of Commerce.

Mr. Leopold: Mr. Toastmaster and Gentlemen: A fair is perhaps the oldest gathering of human beings we have outside the family. It has been said in the olden days when our ancestors crawled down from the trees that the first thing we formed in the fashioning of things was the family and by tracing back through all the history that lies extant upon the written pages before us we find the earliest gatherings of mankind that they might do business on the swap and buy and sell were done in central fairs that were later termed as fairs themselves, where people met in a great aisled place, and placed their wares before all who might come that they might look and buy and learn what their neighbor had done and then perhaps buy of something that had been made or produced, and that old time institution has been brought down, down through the ages of some five or six thousand or more years to the present time, and like other lines of endeavor and co-operative movements has grown and grown, until we see it in every county, in every district, in every community in the United States that possesses a group of citizens who have any vision or who are thinking of the welfare of the people who live in that territory. It is not primarily to benefit the men who are in these enterprises, but all who live in Iowa, that we are most interested.

We have been working for some years, those of us who live in towns, wondering how we might build the cities, and we have made a very grievous error, particularly those of us who have termed ourselves city builders, because we have built some cities, built great market places and great communities largely at the expense of the rural area, and without going into any long detailed discussion we are admitting there is no denial, we have only to look at the shifting population figures to realize there is something doing along that line, and if a stop is not put to it that a grave economic question will face us in the next twenty-five to fifty years. There was a time in the history of this nation when approximately eighty-

five per cent of its people were tillers of the soil or direct producers of things to meet the needs of men, and that figure has steadily decreased with each census period in the history of this nation.

Forty or fifty years ago we found in round numbers two-thirds of our people living on the soil, and when the 1920 figures were announced that figure of forty or fifty years ago had been almost reversed and we found out in round numbers approximately two-thirds of our people lived in the city and the other one-third still upon the soil. In other words ten per cent of the people of this nation live in its three largest cities, New York, Chicago and Philadelphia. Twenty-five per cent of us live in cities of more than 100,000 population and the balance of that two-thirds or sixty per cent is scattered around in the cities, towns, villages and hamlets of less than 100,000 in size. So we are wondering what it all means and there has been a very potent and big reason for this shifting of population, for the exodus from the farm toward the town. The reason has been primarily that it has not been profitable as compared with other lines of industry and for a like measure of effort. Then too has been the fact that it has not been so profitable and it has been isolated and it requires people to stay far out and removed from other families, from their friends and from social contact, so they move to town that they may enjoy social contact, that they may have better educational facilities for their children, that they may have better opportunities to do things that they want to do and enjoy life as we do in America that comes to us when we come up to the cities and in the communities here and elsewhere.

But the fair has done perhaps more than any other one thing to stabilize, insofar as the industry has been stabilized, the business of agriculture. It has done more to give them at least one annual frolic when they might not only meet together and see and learn, but when they might get that great and important item of social contact and rub the element of suspicion out of our characters, and that is all an important thing. And it is important because those of us who live in cities likewise enjoy going to fairs, and it is doing a whole lot to break down that unseen hidden barrier that has been allowed to grow up, done much to eliminate that and break down the suspicion those of us who live in town have towards the farmer and break down the suspicion the farmer has for the city when he comes into town to purchase the commodities he needs. We have only to analyze the figures, only to look at the agricultural reports, we have only to look at the condition at the present time in the agricultural world in order to realize that the agriculturalist, the dirt farmer has not had a pathway of primroses at all.

We are told for every dollar in circulation that seventy per cent, seventy cents is fundamentally farm money, and so we say it is high time that business men in the cities as well as business men on the farm pay a little more attention to the seventy per cent of our national business. Our biggest industry is agriculture, worth more than any other industry in our nation, and you men are doing that, if you are working with the agencies and in your own institutions to see that he gets a fair deal, an open field and opportunity to market his produce and to give him a return for his labor and his investment. And then we have worked some about how we

can do it best. We have been changing and we have been shifting, we have been moving things, and it has been a gradual evolution that has come to us with a broader view point and by reason of the fact we can see a little farther than we did some years ago. But years ago when a man said that the world was round he was burned at the stake. When one man invented a telescope and bored into the heavens he was driven from his friends among strangers. And out of that has grown a faith in mankind that has knitted us closer together, and out of that period of doubt has come a period of action when we have learned to respect each other and work a little harder, and the time will come when we shall have learned that other lesson of working in harmony, that real lesson of co-operation.

It has been said that a man who owes money can, if he lies awake at night, hear the interest grow, but if he is free of obligations and of debt and if he happens to wake up in the middle of the night he can hear the grain and the grass grow. We have been worried about that situation here, we have been thinking about it. I imagine there are not a half dozen or dozen perhaps fairs in this state that through all of their work throughout the year, their race seasons and others that show a profit; perhaps I am wrong on that guess, but so many have told me that I felt I was not in error in that statement. But you are no different than anyone else. Everyone has taken his bumps. Everyone felt sad. But the ray of sunshine is coming back, and I think you men might be interested in just one little item. It was mentioned by the toastmaster that the institution I represent has been engaged insofar as it is possible in trying to do something to help the basic industry of this nation. We cannot do much it is true. It is an economic problem.

Someone a few months ago said there is an opening for a market in our sister republic to the south here. They got together a few business men, put up some money and shipped down there several carloads of fancy livestock, as good as they could find in this state, and we put it on exhibition at their National Commercial Agricultural Exposition held in the nature of a centennial birthday in celebration of the one hundredth anniversary of the Republic, and they looked and they saw and they wondered that Iowa, then almost unknown to them could produce the things that they needed so badly. They not only looked but they began to buy and in the past two or three months a little coterie of business men have been able to sell at a price fair to the farmers of this state upwards of \$200,000 worth of live stock in Old Mexico. Their agent of agriculture and chief of their bureau of animal husbandry have been with us seeing stock and fine animals for their sixteen agricultural schools. And if sometime in the near future we can build ourselves up an institution financially strong enough we believe we can sell at least fifty per cent of what these Mexicans need and they have told us there is a market there for a million dollars worth of stuff a month if we will get busy on it. And that means co-operation and you men have unconsciously played a part in that because the stuff they bought, generally speaking, was taken from your own catalogues so far as its listing was concerned, for you furnished the people who wanted to go out and buy it with the names of the exhibitors whom we thought were the proper people to approach for buying purposes.

So we are learning a little bit of the lesson of co-operation, and I want to tell you a little incident that I have cribbed from ancient history, from ancient writings, and perhaps a little from the book of Daniel which illustrates co-operation from my point of view and which I think has something to do with the way we are meeting here and in ninety-nine counties and districts men can meet in gatherings of this kind. It is through man's willingness to work together, and I know you have grown to the stature you have achieved only because you have not only been willing to work together, but that you have actually found an answer to the word "co-operation." We are told in the dim days of long ago, some 2300 years before the Christian era was founded the old time city of Ninevah with its successor the great city of Babylon, and with the coming of those days was Nebuchadnezzar with immense slave power in his hand. When he looked upon the ruined city he decided he would build an even greater one such as had never been known hitherto. He drove his large numbers of slaves under the whip, and we are also told that he erected the beautiful hanging gardens in fifteen days, and he drove them and drove them, and then says the book of Daniel when the job was finally completed it is said to the Lord of Hosts it was displeasing because the city had been built by such power and he turned Nebuchadnezzar out and the city fell. In succeeding generations again rose up another great monarch known as Belshazzar. He looked upon the ruined city of his fathers and decided it must be rebuilt. He was a great man, broad of shoulder, mighty of sinew, and he was strong-minded as well. He was so strong-minded and self-sufficient that for the rebuilding of Babylon he was the sole architect and designer, with its walls 125 feet in height and broadened out to twenty and twenty-five feet in width, and all the other wonderful features of that great city. Then again the angel reached his hands across the water and it was weighed in the balance and found wanting and another city fell because the Lord of Hosts did not like a one-man town, and that community fell never to rise again. And the last of these three communities that I have in mind is that of Jerusalem, that ancient city of the early periods, a survivor of the past and that city is supposed to have been built and that community is supposed to have been constructed by each one exerting his full measure of skill, all working and contributing to the building up of the lost cause of his people. And that city was built up through brotherly love, by each one carrying his fair share of the community burden, and built in such fashion it has endured down to the present time.

And so I say that you men are working along these lines in building. You are doing much for the education of the youth of this country. It doesn't do us much good to talk to the average audience of men and women who have achieved gray hairs, bald heads and some years, but when we look into an audience of young faces there is hope, there is light, and something comes into their eyes that makes us think we have not altogether lived and struggled and worked in vain. And when you men have a good fair, and the young manhood and young womanhood of your district come in and see the things that can be achieved through labor and brains they are given an impetus to drive forward, to go on. You give them opportunities to think and that thinking impels them to want a little more in their heads.

I want to submit a few more figures, and I wish you men might retain a few of them. Because you are doing your share, because you are working in an educational program I know you will be interested in the succeeding generation, the boyhood and girlhood, the citizens of tomorrow, on whose shoulders we shall so soon cast the heavy mantle of citizenship, the heavy burden of responsibility, and we owe it to them that these boys and girls must have a chance that comes from better learning, better training, and they can only get it when we give the people the money to build these schools, and that means that they must make a special endeavor in the rural districts. And men, in this nation each year approximately 4,100,000 boys and girls at the average age of six enter our elementary schools. If all were placed in one great school room what a wonderful sight it would be, but how wonderful too if they would stay until they finished. But by the time we get that vast army through the fifth grade approximately two million of them have dropped by the wayside and bust go through life with nothing more than a fifth grade education, except such as they can glean from the university of experience and the school of hard bumps, and 2,100,000 in round numbers, only are left, and by the time they get through the elementary school along up to the seventh and eighth grade we have left about 972,000 only and a little in excess of a half million enter high school and 196,000 of them go through. A mere fraction of one per cent get college or university training. And I give you these figures that I might further say to you that the federal government tells us that on the general average the young man or young woman with a high school training, that if he or she shall go into any business whatsoever that on the general average their earning power is between \$900 and \$1,000 more per year than he or she who must travel along without that opportunity of advanced education.

And so we are thinking about all that. You men are not only building fairs but you are building farm factories, you are not only building fairs but you are building homes; you are not only building fairs but you are building men and women, you are building citizenship, you are building school houses, for you are showing people what can be done by reason of dint of hard work and mental effort. You are building school houses, and you are building wonderful ones in Iowa; consolidated schools. I often-times think when I think of school houses and I think of these figures I have given you, I see in my mind some of the rural school houses I have seen in other states.

You men are upbuilders and optimists in the community in which you live; you show us the best at least once a year; you give us an occasion to smile; you bring to the eyes not only a great gathering of the fruits of the year's labor and show us that the harvest has not been in vain, for you teach us that to sow is to pray, and that working and building and constructing are things worth while and that we shall only reap in proportion to the effort that we have expended.

So I say to you that as secretaries and as managers of the institution which bring a profit in an indirect way to the communities you represent, I am hoping you can do bigger things in Iowa than you have ever done. I wish I might have the opportunity to be useful to each of you individually.

I hope that the institution I work for may at some time in the future be useful to you in your own bailiwick and on your own home playing grounds. But, men, the job is pretty clean cut. It don't mean anything except a little more perspiration, a little more dirtied up shirts and worn out shoes, and later on we shall be favored with the things that are worth while and the things that have been achieved in the past did not come easy at all. But now a broader vision and a little bit clearer insight have come to us, we have tidied up some and we are not going to get lost again from normal lines, and you folks carry the control in your hands to preach a little word of optimism and give a little word of cheer, if you are located in the city, and perhaps a word of optimism will help bring the things worth while to come again. There are good things here; let's work, let's think, let's brag a little, let's have some enthusiasm, let's drive, let's see if we can't instill into ourselves a personality with driving force that will take us through another year and give us that quality of leadership that will make other folks listen and will make other folks want to do something and to profit by the examples we set up in our own communities.

Mr. M. E. Bacon: At this time on our program we have the introduction to you of our officers—not an introduction because you are all acquainted with them, but we thought it a proper thing to introduce the officers elected of the Association for the year 1922. You have had introduced to you our new president, Mr. Estell, who has acted as toastmaster. I will not introduce Mr. Estell at this time. I will first introduce to you Vice President-elect Mr. L. W. Emery, the secretary of the Clay county fair, of Spencer, Iowa.

Treasurer-elect Mr. Roy E. Rowland, secretary of the Southern Iowa Fair and Exposition, Oskaloosa, Iowa.

Secretary-elect Mr. Roy E. Wilkinson, secretary Buena Vista county fair, Alta, Iowa.

President Estell: We will next have the report of the Resolutions Committee by the chairman, Mr. Chas. Barber.

REPORT OF RESOLUTIONS COMMITTEE

We, the Iowa Fair Managers in convention assembled, desire to express our sincere appreciation for the co-operation and support given our legislative committee in the granting of increased state aid by the Thirty-ninth General Assembly, and that a copy of this resolution be conveyed to each senator and representative of Iowa.

The granting of this increased aid is a recognition of the confidence our legislators have in county and district fairs as a factor in our communities in the up-building of the agriculture and live stock industry of our state.

WHEREAS: The Horseman has conducted a fair department in the interests of State, District and County Fairs for the last ten years; and

WHEREAS: The continuance of this department depends entirely upon the degree of co-operation extended it by state, district and county fairs in the future; therefore,

Be It Resolved, That the Iowa Fair Managers Association endorse the work done by this department and urge all fairs to co-operate with it in making it of still greater value to the fairs and expositions of America.

There appears to be a lack of publicity in connection with the fairs of Iowa and especially the harness races, and that the results of races are not generally published in the Iowa papers, or recognized by the Press Association; therefore,

Be It Resolved, That it be the sense of this meeting that a publicity bureau be established in connection with this organization, whose duty it will be to see that all news in connection with fairs, especially the furnishing of race summaries, be furnished the leading Iowa dailies and the Press Association, and that such committee be chosen in the same manner as the district managers.

Resolved, That the Iowa Fair Managers Association go on record as opposed to the expenditure of the funds obtained from county and district fairs as membership dues for elaborate entertainment at annual meetings. It is the belief of the members that the purpose of the organization is to further the interests of the agriculture and live stock interests of our state.

(Signed) CHAS. H. BARBER,
E. A. GILES,
R. D. HAWKS.

Mr. Barber: I move the adoption of the resolutions as read.

The motion was seconded and being put prevailed and the resolutions as read were declared adopted.

President Estell: We will now have the report of the Credentials Committee by Chairman W. S. Weary.

REPORT OF CREDENTIALS COMMITTEE

To the Members of the Iowa Fair Managers Association:

We, the Credential Committee do hereby beg to report that we find there are 73 members that answered to roll call, with 84 entitled to vote.

We do further find that the following fairs have received state aid and haven't paid their dues in this Association for 1921: Corning, Vinton, Britt, Donaldson, Sheldon and Avoca.

We do also find that the following new fairs that have received state aid and have not solicited membership in this Association: Milford, Dubuque, county fair at Dyersville and Fremont county fair at Hamburg, Iowa.

Respectfully submitted,
W. S. WEARY,
C. H. TREBBY,
H. S. STANBERY.

Mr. Weary: I move the adoption of the report.

The motion was seconded and being put prevailed, and the report was declared adopted.

President Estell: We will now listen to the reading of the report of the Auditing Committee, Mr. L. W. Emery, chairman.

AUDITING COMMITTEE'S REPORT

To Officers and Delegates of the Iowa Fair Managers Association:

Your Auditing Committee has gone over the treasurer's books of this Association and beg to submit the following report:

Receipts from dues, donations, etc., from Sept. 1919 to

Dec. 12, 1921.....	\$2,971.39
--------------------	------------

Disbursements shown by check stubs.....	2,763.88
---	----------

Balance in Adair County Bank.....	\$ 207.51
-----------------------------------	-----------

This balance O. K'd by phone by Mr. W. A. Goodman, cashier.

Respectfully submitted,

L. W. EMERY,

J. C. BECKNER, Committee.

Mr. Emery: I move the adoption of the report.

The motion was seconded and being put prevailed and the report was declared adopted.

President Estell: We will next have the report of the treasurer, Mr. F. A. Gatch.

Mr. Gatch: The treasurer's receipts have been \$2,971.39 and disbursements \$2,763.88, leaving a balance of \$207.51, added to what has been turned over by Mr. Bacon at ten o'clock this morning makes a balance of \$1,021.72. That was just up to about ten o'clock this morning, leaving a balance now of \$1,021.72, with the big end of this year's dues to be collected.

It was moved, seconded and carried that the report of the treasurer be adopted.

Mr. M. E. Bacon: Mr. President and members of the Iowa Fair Managers Association: During the meeting today I made a report and I made a recommendation calling this Association's attention to joining, or taking out membership in the American Association of Fairs and Expositions. That membership would cost you fifty dollars. The state associations of Illinois, Wisconsin and Nebraska are members of that association and I understand the association of fairs of Michigan are going to apply for membership, and as the chairman of the membership committee is here, he is president of your state board of agriculture, he can tell you in a few words the benefits that this association would derive by taking a membership

in the American Association of Fairs. Mr. Cameron, will you explain that to them please.

Mr. C. E. Cameron: Mr. Chairman and Gentlemen: Being connected with the International Association of Fairs and Expositions for a number of years, being chairman of the membership committee, we have been very strict in regard to the membership of that association from the simple fact that their rates had to be so much and that they had to hold two successful fairs. There have been several delegations from the different states of the different county fair associations to become members of it. The matter came up for discussion after the committee had discussed it very thoroughly they decided to admit them, for this reason—the associations of Illinois, Wisconsin, Indiana and Ohio are members now. Nebraska is going to make an application and spoke to me in regard to Iowa. I will tell you gentlemen the benefits that can be derived from becoming members of that association. You know the international association of fairs and expositions has a membership of all state fairs and expositions in the United States and most of Canada. Every year it gets together a bunch of men who are experts on fair matters. Now each one of these delegates is entitled to a vote in it and to have one man at this meeting. Now that way all the delegates coming to this meeting can listen to the reports of the different fairs and things of that kind, can go home and make a report at your annual meeting just what has taken place, what are the best results of these fairs. The way we look upon this matter is this, it is you gentlemen representing the Iowa Fair Managers Association that makes our fairs a success, it is through you we get the exhibits of these great state fairs all over the United States, and the membership of the International Association took that matter under consideration and thought as long as they were the people who made the state fairs through their exhibits, through influence with the state fairs in their states, that we should admit them as members in the association. I think it is a good thing. If you would send a delegate to our annual meeting of this international association of fairs and expositions, that delegate could come back and report on what has been doing all over and the state fairs are just the same but upon a larger scale than the county fairs and could come back to you with some ideas and things that I think would be a benefit to you. I think it a good thing.

Mr. Barber: I move that the Iowa Fair Managers Association make application for membership in the International Association of Fairs and Expositions.

Mr. Bacon: I would like to offer an amendment to that motion that the board of directors be directed to send a delegate.

The motion as amended was seconded, and on being put was carried.

President Estell: There is another matter Mr. Bacon has to bring up at this time.

Mr. Bacon: Another matter I mentioned in my report this morning, you remember, up until the past year we have always been holding a spring meeting in Iowa. Some of these meetings have not been attended as they should have been. It has been suggested by other people to me to put it in the report I made today and bring this matter to your attention.

President Estell: Let's have some discussion on this. It seems to me that this suggestion is a mighty good one, one that should be carried out.

A Member: The proposition presented by Mr. Bacon is one that every secretary of a fair in Iowa should give heed to. It is getting in our fair organizations so we must pay more attention to these attractions. Some of these exhibit people that are here perhaps will want to take me out and shoot me, but I am going to talk real plain. Some of the attractions being put over at these fairs in Iowa ought to be canned. The fair managers of Iowa should get together with the board of directors and standardize some of the attractions; in other words should get together and make a blue book of attractions and promoters of attractions that are responsible. This fair managers association should draw up a form of contract and do away with a whole lot of this substitution that is put over by irresponsible agencies. They are peddled around and every one of you have got on your desk right now, you have had a thousand announcements. They are growing up like weeds. Our fair last year paid good money to what we considered a reputable agency; when we got the line-up we got a bunch of junk. It was rotten. Let's pay fair prices for attractions. Let's analyse these attractions, let's see whether they will fit our communities, and let's buy attractions from attraction companies that are reputable and are in a legitimate business, and let's get some of the others weeded out. I would like to add that the state fair board of Iowa can give to the county fairs and district fairs of Iowa a whole lot of help by lending their experience in securing attractions to this organization. And we should ask their co-operation and what is not good enough for the state fair should not be good enough for the county or district fair.

President Estell: Are there any other remarks?

Mr. Barber: I vote against the spring meeting for this reason. There are three or four or five different groups of fairs that have their meetings in the spring, and you would have about twenty-five or thirty this year. Off in the northwest part we have a meeting in Sioux City every year. Fifteen or twenty meet there at headquarters. We have one in northern Iowa and so on over the state, and a great

many of the fair members on my board don't feel it is worth the expense of sending me 150 or 200 miles to attend a meeting of this kind when we are obliged to attend the district meeting representing our own race circuit. That is sometime during the spring. I don't care to attend three or four meetings in a year. We have the general meeting in our own location where ten or fifteen get together. I am sure if you have a meeting in the spring twenty-five or thirty may come, but I don't think you will get any meeting at all like you have here.

President Estell: Does anyone wish to make a motion? Are there any who wish to talk further on this subject? Do you wish to take any action in regard to the remarks made by the gentleman as to weeding out some of the attractions companies that are trying to do business in the state at the present time or do you believe that the fair secretaries should handle that matter themselves.

A Member: We are here for experience and giving our experience, and I possibly am treading on dangerous ground, but how many of you secretaries that buy fireworks take your program and check them up and see whether you get all you pay for or not? We did twice and made money both times.

President Estell: This is quite interesting. Has any one another story to tell?

A Member: I had a little experience along the same line as the gentleman who just spoke here. A year ago last fall at the time of the fair I had some attractions booked and the morning of the first day of the fair the booking agent came to the fair and he says: "Mr. Scow, it is impossible for me to furnish some of the attractions we have booked."

I said: "If you can furnish me some just as good, all well and good." He told me what he was going to furnish me. I said you can't give that kind of stuff with that amount of money. He says: "You will have to take this or we will pull the whole thing off of the grounds." That is the experience I have had with one booking agency. The same thing happened last fall, just about a week before the fair I got notice from the booking agency that there was two acts it would be impossible for them to furnish and they would have to substitute something else. You will find in their contracts that these booking agencies have a clause in there that they can substitute at any time prior to the time of your fair with any act that they are

a mind to give you, and I think that these contracts we sign up for these free acts ought to be looked over a little more carefully and not all be one-sided.

President Estell: Just as a suggestion, gentlemen, I was wondering what was your notion about this association appointing a committee possibly to confer with the state fair board in regard to the various attraction companies. I just simply offer that as a suggestion for further discussion.

A Member: Mr. Chairman, as just has been said, this is a suggestion, that a resolution or anything along that line would be of no benefit to any fair secretary. I think the proper thing when a fair secretary goes to buy free acts he has to use his own judgment, and have a contract to that effect that the attraction is one hundred per cent satisfactory to the fair board, and most of the good booking agencies will do that. There are a few agencies that do not give this kind of contracts but you go to any good booking agency and ask for a contract for one hundred per cent delivery I don't think there will be any question about it. We know there are the independent acts we buy some of us once in a while put up a bond to the effect of their appearance and also to their quality. But I think that is up to the fair secretaries and not to the state fair management.

A Member: It seems to me that the attraction man is the goat at this meeting. We bought attractions for years and often had them substitute different attractions for the one we bought, perhaps a man would die in the troupe or something like that would happen, but as yet we never had any substitution but what was better than what we originally bought.

Mr. M. E. Bacon: As I have been engaged in the attraction business off and on for about nine years and I am secretary of a fair in Iowa and have been secretary of the Iowa fairs for the past four years and I want to say this to you gentlemen, that you should not condemn all the booking offices for what one or two irresponsible booking men might do. There are four or five high-class booking offices doing business that do business on a legitimate square basis, and when they substitute in a case of substitution with you, sometimes as Mr. Stewart tells you they can't avoid it. They are on the square and when they sell an attraction they do their utmost to deliver it to you, and I will dare say any of you, I don't care what agency you deal with of the responsible ones, when they substitute they try to get you something better than what you had already con-

tracted for. There are some irresponsible people in the business and there are people that will lie to you, but that is up to your own fair committees buying your attractions. You can no doubt draw up a resolution or anything of this association and send it broadcast to the different secretaries, but it is eventually with you whether they live up to them or not. You can't enforce it, no law that says that somebody can't do business in this state. If some of you fair secretaries have been lied to, have been misled, you can tell your brother secretaries, but don't condemn all people that do business in a square, legitimate way.

A Member: I should have added while I was up, something along the line of Mr. Bacon. We have been doing business, we have bought attractions and we never have been substituted on but once and they had good reason, that was during the war when transportation fixed things so they could not get there. If you do business with a responsible agency, and there are responsible agencies, you ain't going to have any trouble about the delivery of the goods. I might also add along with my other talk we didn't have any trouble in settlement with the fireworks company. We just showed them that they didn't send according to the program and settled that way, but if we hadn't checked them out we would have been out something.

President Estell: Any further discussion, gentlemen? Does anybody wish to bring up any other unfinished business at this time? If not Mr. Bacon will take charge of the question box which is quite well filled and it looks quite interesting.

Mr. Bacon: Gentlemen, when we arranged this program and eliminated the entertainment features we have been having for the past two or three years it was suggested by the joint committee of the State Board of Agriculture and your entertainment committee to try to get something to be educational and beneficial to all you members. We have established what is known as a question box. Some of you men have deposited your questions here. When these questions are read don't be timid about answering them. We want your answer, that is what we want. Let's get together; anything you don't know and anybody does know let's benefit by his advice. The first question, "How many of the fairs are there paying their treasurer a salary, either bankers or otherwise? Mr. J. C. Beckner."

Mr. J. C. Beckner, of Clarinda: I would like to explain that question. This year it came to the annual election and the Board of Di-

rectors went to a bank and asked if they would like to have the treasurership. They said yes, for a hundred dollars. We didn't feel like paying it, so I wanted to ask this question to see who is paying any money to the treasurer, whether a banker or outside of a bank, that is what we would like to know.

Mr. Moore: The Inter-State Fair at Sioux City does not pay the treasurer any salary.

President Estell: What do you ask the treasurer to do, do you ask him to write checks?

Mr. Moore: No sir, I do the making of the checks. All we ask is for him to get the money that week, and work. He is a member of our board.

A Member: Cass county has for many years had one of the bankers as treasurer. He has been charging on a percentage basis that cost our association something around about \$125 a year. Two years ago it was shifted to an outsider and pay a salary of \$50 for handling the business.

A Member: With us, we are fortunate enough to have a Baptist preacher as treasurer. All the salary he charges each year is each one of the ministers of the county to come out to see a few good races and some of the sports.

A Member: Marshall county has had the same treasurer sixteen years. He does not issue any checks, simply takes charge of the ticket sales at the fair. We haven't paid him any salary as yet and don't expect to.

A Member: Hardin county divides the treasurership among three banks, each one takes their turn, and we do not pay anything, only the helpers at the ticket office. The treasurer looks after ticket sales and he has helpers to help in the ticket office.

A Member: The fair at Osage does not divide the account among the banks, but the banks usually have to because it is always in the red. But they don't pay any salary to their treasurer.

A Member: Carroll county has never paid any salary and has had the same treasurer for the last ten or fifteen years. He takes charge of the ticket sales, looks after that and checks it up, makes his annual report, has no pay for any part of it and loans us money at six per cent.

A Member: In addition to our treasurer in Marshall county working sixteen years without pay, being a banker he loaned us \$5,000 to get out of the hole after our last fair.

A Member: Decatur county fair don't pay any salary to the treasurer. He takes charge of the sale of tickets, taking care of the money and charges no salary.

President Estell: For the satisfaction of Mr. Beckner I want to ask all those who pay your treasurer a salary to please raise your hands. There are nine here.

Mr. Bacon: The next question is, "What is your fair asking for concessions for the year 1922? Carl Lutz, secretary Inter-State Fair at Marion, Iowa."

Mr. Beckner: I will say in the past Clarinda fair has always charged two dollars for the best stuff, and whatever they could get for the balance, per front foot.

A Member: Harrison county charges two dollars a front foot.

A Member: North Iowa Fair, Mason City, charges all the traffic will bear, from \$4.00 down to 2.50. We find out they buy the \$4.00 spots lots quicker than the cheap spots. That does not cover electricity, just the ground, \$4.00 a front foot. As soon as we can we get the \$4.00. We get cash on all contracts signed the Saturday before the fair, cash in full; the others one-fourth down.

A Member: Mr. President, from observation of fairs I have gone to there are a good many fairs set up three times as many concessions as they ought to have and charge more money for such concessions for the concessions to make money. We fill the ground up with concessions and they go away busted and they give your fair a black eye every time. We sell so much space and stop and we charge them a good big price for it. There is so much space we sell and then stop; the other fellows must go on.

Mr. Bacon: At Davenport we charge \$5.00 per front foot for our space. We get one-half down with the contract and one-half on Wednesday. This year we are going to adopt the plan of trying to get one-half down prior to the fair, and when setting up getting payment in full. Mr. Gatch was my concession man last year, had a good sale of space, had a lot of local people thought they wanted to go into the concession business, a lot of people out of work thought that was a way to make money. We had to stop selling, could not find any more space to sell. We are going to try to cut out some of our local people because they hurt your fair when they go into the concession business, they don't know the business, they come out losing money and the rest of the year they knock the fair because they didn't get rich.

A Member: The concession business is like anything else, if you know how to do it you will make money. If you don't know how to do it you lose and you lose just as sure as God made little apples.

A Member: I would like to ask Mr. Pickett how long before the fair opens do you begin to sell concessions?

Mr. Pickett: Any time, start now. I have sold some now for next year.

Mr. Bacon: We will have the next question. The next question is quite long so you will have to give your strict attention: "We had a contract with 'Wolf's Greater Shows,' William J. William, manager, to bring their concessions to our fair. They paid down \$50 and were to have exclusive rights on the rides and shows. On Monday the week of our fair we received a telegram from Mr. Wolf saying on account of railroad connections cannot make your fair, the same old excuse. What can we do with such people? Mr. C. P. Zimmermaker, secretary Cedar County Fair, Tipton, Iowa." There is one for you.

A Member: I am from West Liberty and Mr. Zimmermaker is a neighbor of mine. He made a mistake to sell the exclusive right for too little money. He ought to have got \$500 instead of \$50.

A Member: In Buchanan county the same man you speak of did the same trick with me this year. He called Mr. Zimmermaker on Monday; he called me on Tuesday, he gave me a little over a week but he went back on me just the same.

President Estell: Did anybody else have any grief of this kind? We haven't had any remedy yet.

A Member: I would suggest requiring a larger deposit on the making of the contract.

President Estell: That seems to be the best remedy we have over these men, to get all you can down, and get nearly all of it down.

Mr. Bacon: The next question, "Would it not be possible for the fair association to co-operate in purchasing entertainment in order that the vaudeville entertainment might be changed from day to day. A. C. Bryan, secretary O'Brien county agricultural exposition."

President Estell: He includes there that we had two fairs on the same week they might interchange attractions, change every day and have a regular Chautauqua circuit.

Mr. Bacon: I will try to answer that for you. Attraction people cannot travel over the country like Chautauqua people, they could not go from fair to fair from day to day or every night with all their trappings and paraphernalia. All of you who have had attractions know they come in a day or two in advance of the fair, and they have rigging and apparatus it takes them some time to get set up, it would be impossible to try to have attractions, something different traveling from fair to fair each day.

A Member: I am asking that question and I ask it because we have purely an agricultural fair, have no races, and our free entertainment is practically all our attendance. They see the stock at the fair one day they have seen it for the whole week. I was in Chicago recently and talked with the manager of the Western Vaudeville agency and talked with others. They say it would be possible to put on a middle of the week engagement, two in a week, but not change every day. I asked that to start a discussion. We are open for some fair that we could make connection close enough with.

A Member: Mr. Chairman, I don't see where the changing every day would benefit the fair. I think we all ought to know we are buying acts that are drawing crowds and doing us some good. They are only free attractions and if they are not drawing attendance what are they good for? I had an attraction this year, I don't want to mention the name, but it was a real attraction; I know of people coming back the next day and the next day to see that attraction just as much as they came to see anything else. I think we ought to buy attractions that are going to draw the crowds. I believe we can do it if we use our head a little bit. I don't see why changing every day would do a bit of good. I know people came for miles to see this one attraction I had this year. I know it brought good crowds just the same as the races. I think possibly it brought more crowds than the races.

President Estell: It seems to me that the solution of that problem is to get good acts, advertise them and draw the crowds in there. We will have the next question.

Mr. Bacon: The next question, "There is \$100 held back by the state if a fair does not have the secretary at the agricultural convention, said fair loses the \$100. Would it be possible to have this money divided among the fairs that do attend?"

Mr. Corey: I may say that this law I believe has been in effect

three years and so far there has never been anything to divide up, they have always attended and got the hundred.

President Estell: From what Mr. Corey says I don't believe we need spend any further time on this question. Even though it was divided up if one happened to stay at home we would only have a hundred dollars, getting a dollar apiece out of it.

Mr. Bacon: The next question, "Will the time come again when entrance money for horse races will be retained by the secretary? W. E. Rathbon, Eldora."

Mr. George White: Gentlemen, I hope it never does.

President Estell: Mr. Curtain, you have just come in, we have a question box, and there has been a question deposited here, "Will the time come again when entrance money for horse races will be retained by the secretary?"

Mr. Curtain: All I can say is that I hope it wont. Is that a good answer? I hope it wont, if you do I am afraid you will not have any horses at the fair; that has been the history of the fairs that tried it out. A few of them tried to and it didn't work very satisfactorily.

Mr. Bacon: The next question, "Is it advisable to issue pass out or return passes? If so, what is the best method of handling this to avoid imposition on the fair association? W. M. Clark, secretary Marshall county fair, Marshalltown.

President Estell: You mean to outside gates?

Mr. Clark: Yes sir. I understand several fairs of the state, or some fairs, that give pass-out checks, no discrimination, anyone gets a check returns any time. I would like to know whether they find that a benefit and how they guard against imposition on these pass-out checks.

President Estell: Anyone here guilty of giving pass-out checks at the outside gates and wants to admit it?

A Member: We give pass-out checks at the outside gate. Have pass-out checks for the afternoon, also different checks for the evening, Wednesday, Thursday and Friday. These pass-out checks in the afternoon are not good after three o'clock and the evening checks are not good the next day. We have different colored pass-out checks for the different days and different colored pass-out checks for the night. The gate keepers are instructed not to admit anybody with checks in the evening that are pass-out checks in the afternoon.

President Estell: May I ask do you have any circumstances in

your case, for instance, do you have automobiles parked outside and necessary for people to out and get lunch and bring it in?

A Member: We park inside the grounds until the ground is filled up, then have to park outside. We probably give 150 pass-out checks in the afternoon and very seldom any pass-out checks in the evening. They have never yet got us into trouble.

A Member: We give pass-out checks at our fair, Hardin county, good up until four o'clock. After four o'clock these pass-out checks are not good. We increased the price of our fair to 35 cents, used to be 25 cents years ago, increased the price to 35 cents and met a good deal of objection to it, cut off the attendance quite a little for a year or two, then raised it to 50 cents and then they did kick. We issued pass-out checks so they could go up town any time they wanted to during the day, but not good after four o'clock. We don't issue any pass-out checks in the evening at all, never shall. We never had any trouble but once. A couple of boys came in and got pass-out checks and went up town and sold them for ten cents apiece. We got rid of that trouble and haven't discovered any serious trouble since that. Most everybody goes out during the day once and comes back.

A Member: Just assume I come up to your fair and pay my way in. I want to go out in the course of the afternoon and they give me a pass-out check. How can they hinder or know whether I come in myself on that pass-out check or turn it over to somebody else and they come in and the association loses half a dollar. I absolutely know that that is worked at our fair at times. What I am getting at is if we are to issue any pass-out checks at all it seems to me impossible to get along without them in some cases being imposed upon by the people turning around and giving the pass-out check to somebody else.

Mr. Bacon: I will try to answer that question in the method that was used at Clay county when I was secretary there. We had a stamp made with the name of the fair with a moveable date on. When anybody went out,—we didn't want to issue pass-outs—when anybody went out we took this stamp and stamped them on the wrist, and they had to show that to get back in.

Mr. C. E. Cameron: In my own connection with the Buena Vista county fair at Alta we have always given out a pass-out check. It is done because we want to accommodate, and we are probably differently situated than others, we have a park just across the road from the fair ground, and of course people bring their dinner with

them and go over and eat there and then come back to the fair. I tell you if you accommodate these people that want to go out, I don't believe there is one pass-out check in a hundred that is abused, and for ninety people you accommodate they are all friends of your fair, and if anything happens they want to go out or have to go out and then have to pay you an extra fifty cents these people are not helping you and are not friendly as they should be. The way we do at Alta we have a different colored pass-out check every day; for instance, we start out Tuesday with a white one, Wednesday with a red one and follow with a blue one and so on the check cannot be abused. A man that will stand outside waiting for a pass-out check to get in is not going to go to the fair at all and somebody has paid fifty cents to go into the fair and that abuse would be very little. And I think that every good fair for the convenience of the people, and especially the common people and things of that kind, ought to go the limit to accommodate them in every way when the abuse will be very small in coming back on these pass-out checks. As a rule nobody is going to go home from the fair when the program is not over and as a rule he gets the biggest part of your program, your attractions and everything in the afternoon and at five o'clock the show being over we issue no more pass-out checks after that. Just think for a moment how small the per cent would be of somebody trying to get in. If a man will stand out there an hour trying to get in he will go around some place and crawl under the fence anyway. I think the pass-out check is a benefit for every county fair because it is people from the country and the community where you are doing business you want to accommodate if you possibly can and make it as convenient for them to go in and out; they may want to go to the train to meet some friend or something of that kind, or an engagement, I think we can't go too far for the convenience of the people who attend our fairs. I am talking about the ordinary country fair, the more convenient you make it for people to attend the fair the better they are going to be satisfied.

A Member: We have just had fair down there two years. We find our greatest trouble down there is the farmers come in with automobiles and have to go home to do chores, and when they go home to do their chores it is all over, they don't come back the second time. I think the only thing to do as Mr. Cameron says, we can't make a mistake in giving a pass-out to go out and do the chores and come back to the fair. I think we will issue them next year, so the farmer who wants to go out to do the chores will come back.

Mr. Cameron: I want to say further in regard to the pass, while the admission is fifty cents it might do, but after five o'clock the admission is twenty-five cents, then it would be no use, that admits them to the grand stand. People on the ground you can't drive them out at night. Of course we usually have a canvas we can stretch clean around the ground to shut out all these people roaming on the ground. These people could go up in the grand stand at any time for twenty-five cents. They pay the same as people outside after five o'clock.

A Member: We followed Mr. Cameron's suggestion, the only difference we charge fifty cents at the outside gate at night. After five o'clock they get a coupon entitling them to go to the grand stand. We used to give pass-out checks but they abused the privilege so we cut it out, don't issue pass-out checks.

A Member: Where pass-out checks are used wouldn't it be better to have the party the check is issued to sign his name and then when he presents that check at the gate again have him sign his name so that would be proof it was the same party using the pass-out check that went out?

President Estell: It is getting late, and while this is a very interesting subject, we have some more questions. We will proceed to the next question.

Mr. Bacon: "What is the most practical method of collecting fares for the evening entertainment where the same crowd stay on the ground from afternoon until evening?"

A Member: We have not yet held any night shows but contemplate that matter, and some of our directors asked me to ask that question and have it discussed, get it answered by those who have had experience, possibly others might be in the same position we are.

A Member: You can't clear the grounds, but if you contemplate having your night show in front of the grand stand and charge for admission, then you have solved your problem. You can clean out your grand stand and charge admission to the grand stand.

Mr. Bacon: "How many secretaries refund advance payments made by concessioners where they do not appear? W. S. Smith, secretary Lyon county fair, Rock Rapids." The answer is, none.

Mr. Smith: The reason I asked that question, it came up this fall with a man who said he had backed out of probably twenty-five or thirty Iowa fairs, didn't go at all. I got several letters from him

stating he got his money back from all Iowa fairs except one. I was wondering whether he was a liar or who.

Mr. Bacon: Next question: "Have any of the fairs put on a theatrical play in front of the grand stand at night as a free attraction instead of fireworks, and if so was it satisfactory from all points."

A Member: I handed the question in, and the reason I handed it in, the free entertainment in the day time some of them stated was the same at night. I was talking with a gentleman who said up here at Strawberry Point they put on a theatrical play and he said it was a success, they were going back there this year for a return engagement. So I hunted up the representative here today from Strawberry Point, and he said that they put this company on clear across the track on a platform and he said he stood up in the grand stand to see if he could hear them, and he could hear just as plain as if they had been in an auditorium. He said they would be back next year. He said the crowd just cheered. He said it was a money-maker to them. He said they drew a crowd.

A Member: There was a company came over a few years ago and put up a tent in town and killed our night show, and we begged and pleaded with the city council and finally got them to come across and now he comes to our fair and he shows at night, splits 50-50 with us. We have a big platform across the track from the grand stand and he has a stage and scenery and everything there the same as in a theater and put chairs on the racetrack just as thick as they can be, fill that whole thing full every night of the show in good weather.

A Member: Down in Mills county we put on a musical show this fall instead of fireworks. Everybody was pleased with it. Had a stand across the track and we put a lot of extra seats down in front of the grand stand. Just put this show on instead of fireworks and it brought them out.

A Member: In Winnebago county our report of the grand stand admissions is nearly the same in the evening as it is in the day time. We put on a theatrical show three nights, three different plays. We attribute to that the cause of the crowds coming, all well pleased and they wanted that same thing over again.

Mr. Bacon: The next question: "Have any of the fair boards in arranging free attractions confined themselves to independent companies?"

President Estell: That is quite a big question, gentlemen. Independent acts I presume is what is meant. I believe this largely refers back to the discussion we had previously and if it is satisfactory with the gentleman who asked the question we will take it for granted that his question has been answered. The next question.

Mr. Bacon: "What does this body think of asking the legislature to levy a one-half mill tax to be used to help the county fairs of the state?"

Mr. Barber: I wonder if I could explain a law that Cerro Gordo county and Marshall county were instrumental in having passed last winter. In Marshall county and Cerro Gordo county acting under a law on the statute books which permits boards of supervisors to levy a half mill tax for the building of buildings or payment of debts on old buildings, our board of supervisors have levied a tax for this year and it has gone on record for three more years, and we have anticipated that levy and spent about six thousand dollars of it this year, building a fine barn and borrowing some more money and to make it sure the members of the board of supervisors are on the fair board and also on the notes.

A Member: This question has been worked on for four years. We have had it in our board of supervisors, I don't know how many men have gone and presented that, farmers, merchants, bankers and all have got the same answer. What I would like to have is this, that instead of "may" the law shall be "shall". There is a law on the books of the state of Iowa where the Farm Bureau money if they can show so many signers, how many it is I don't know. There is a law to that effect in the state of Iowa and why may we not have something along that same line. If you know how hard we have worked with our supervisors, how bad we needed this.

A Member: We are getting \$2,000 from the state. I am afraid if the legislature would insist on every county levying a tax to pay us, they would take back that \$2,000. I am in favor of not killing the goose that lays the golden egg.

A Member: Which would raise most?

A Member: I will take the \$2,000. A bird in the hand is worth two in the bush.

A Member: I think there is a lot in the board of supervisors being directors in the county fair. We got a thousand dollars last spring from the board of supervisors but I had to circulate a petition and get two-thirds of the taxpayers in Humboldt county and present that

to the board of supervisors to get our thousand dollars. This was for a period of five years. That was the first money we ever received from the county.

Mr. Emery: This county tax I think is a mighty good thing in more ways than in receiving the money. I think it is something that makes every taxpayer a partner in your fair. Most of the fairs I suppose are stock selling propositions the same as Clay county; we have probably three hundred men interested in our fair as stockholders, they are partners in the fair. Now we have got every taxpayer in Clay county as a partner in the Clay county fair. I was successful in putting this thing over and I think it is a mighty good thing in two ways, in the way of getting money out of the county and the way of getting every taxpayer interested. I think if you fellows go after the board of supervisors right you will get it. The day that this law passed our representative wired me and I went before the board of supervisors, they happened to be in session, and they turned me down cold. After that however the board met one day later on. We organized a gang and we went up there. We went before our board and got it through just fifteen minutes from the time we got in the court house. Get a good spokesman and I believe if you boys work it correctly you will get it. It is not only the money but it is getting these fellows interested, getting every taxpayer in your county a partner to the fair.

President Estell: I believe it would be rather interesting for us to know tonight how many of you men are receiving county aid at the present time. Let's see your hands. Let me see the hands of those fairs that are not receiving county aid. There are eighteen receiving county aid and fifteen that are not.

Mr. Clark: Hardin county fair receives aid from the county indirectly. For instance, we have got two, three or four carloads of crushed rock shipped up there from Marshalltown, be on the side-track right alongside of the grounds and ordered the cars spotted there. Go to the supervisors and say there are three or four carloads of crushed rock down there and they will send county teams down there and by some mistake will haul that into our fair grounds. I think the first year the fair started sixteen years ago we got \$500. That is the only direct money we ever got from the board of supervisors.

A Member: In Linn county we have two fairs, each of them receives \$500 each year.

Mr. White: I think I have been secretary seven years down there and we have got \$500 two different times. That has been about four or five years ago.

Mr. Bacon: The next question, "I believe that the county fairs ought to go into a mutual insurance so that the proposition of the state aid to the county fairs should be deducted and all these fairs that are unfortunate to have wind or more rainy days draw their association insurance to be paid according to the gate receipts showing up on the average years. I think a law ought to be passed in the legislature according to that. J. M. Olson, president Humboldt Agricultural Society."

A Member: I think that should be referred to the resolutions committee.

A Member: In regard to that, I think it advisable to wait until the insurance companies get this thing figured out. They say it is a loss. We better let them carry it until they get it figured out.

Mr. Bacon: The next question, "How many fairs are receiving county aid." That question has been answered. "Why should death defying stunts be employed by fairs? Does it increase gate receipts enough to justify expenditures?"

Mr. Stanbery: We can all answer that question. We are all interested in trying to get money in through the gates. It has been my experience nothing gets them quite so fast as something that is death defying. If they thought somebody was going to get killed in an automobile there on a certain day we would not have enough room on our grounds to hold them. That is the God's fact and it is just as unpleasant for me as it is any other fair manager in the state of Iowa to put on an attraction that is hazardous and a dangerous proposition. I shiver all the time while the things happen on the fair ground that I am representing, but as long as they bring the people and increase our gate receipts that is the thing we have got to have.

A Member: The reason I asked that question the American public is demanding more thrills. I see the managers of the amusement parks had a convention and they say they have got to get new devices, something more thrilling, more hazardous. All the world is wanting something more thrilling. My idea is why is it necessary to require a man to do something he is liable to get killed to give something spectacular and pay him a great big price to do that, will it increase the gate receipts? For instance, a man that goes up on an airplane

and turns somersaults on the wings, people see that. They don't go to the state fair to see that, they would go to the state fair anyway. We had an automobile race and almost killed some spectators. We had a motorcycle race and almost killed some men running through the fence. We cut this out and have just as big crowds and I say what is the use of hiring a man to kill himself before the people.

President Estell: This completes our program and we will now adjourn.

PART IV

Awards of the 1921 Iowa State Fair and Exposition.

HORSE DEPARTMENT

SUPERINTENDENT.....C. F. CURTISS, Ames, Iowa.

PERCHEREONS

EXHIBITORS—L. C. Altemeier, Newton; Ames Bros. & Sons, Mason City; Frank Bedell, Springville; M. C. Bitterman & Sons, Nora Springs; A. L. Champlin, Ames; W. J. Dawson, Washta; Dunhams, Wayne, Illinois; W. D. Grove & Son, South English; Wm. A. Hale, Anamosa; E. P. Hamilton & Sons, Garden Grove; Ernest L. Humbert, Corning; Iowa State College, Ames; A. & J. C. Johnson, Lynnville; Frank Keenan & Son, Shenandoah; Lee Bros., Mitchellville; N. M. Leonard, Waukee; J. C. Redman, Altoona; Rookwood Farm, Ames; J. O. Singmaster & Son, Keota; J. E. Smith & Sons, Laurel; K. A. Wilson, Norwalk.

JUDGE.....A. L. ROBINSON, Pekin, Illinois.

Stallion Five Years Old and Over (\$50, \$40, \$30, \$20, \$10)—First, J. O. Singmaster & Son on Marg 128218; second, Ames Bros. & Sons on Irida Boy 131693; third, E. P. Hamilton & Sons on Pompey 121691; fourth, Dunhams on Master 137069; fifth, Frank Keenan & Son on Primo 132990.

Stallion Four Years Old and Under Five (\$50, \$40, \$30)—First, J. O. Singmaster & Son on Maple Grove Trojan 138951; second, J. O. Singmaster on Maple Grove Thomas 132542; third, W. J. Dawson on Joli 156586.

Stallion Three Years Old and Under Four (\$50, \$40, \$30, \$20, \$10, \$10)—First, Dunhams on LeSuer 150878; second, J. O. Singmaster & Son on Maplegrove Coco 153092; third, Ernest L. Humbert on Robt. Olbert 151508; fourth, Ernest L. Humbert on Seigle 151820; fifth, Ernest L. Humbert on Governor Olbert 151508; sixth, Ernest L. Humbert on Guy-Olbert 151509.

Stallion Two Years Old and Under Three (\$50, \$40, \$30, \$20, \$10, \$10)—First, J. O. Singmaster & Son on Fairholme Lagota Jalap 157209; second, J. O. Singmaster & Son on Maplegrove King 158915; third, Dunhams on Optat 157092; fourth, Ernest L. Humbert on Minet II 157600; fifth, Ernest L. Humbert on Croford 157607; sixth, Ernest L. Humbert on Remus 162569.

Stallion One Year Old and Under Two (\$50, \$40, \$30, \$20, \$10, \$10)—First, Rookwood Farm on Jardine 165358; second, L. C. Altemeier on Maltais Wayne 166954; third, J. O. Singmaster & Son on Maplegrove Chadwick 165649; fourth, J. O. Singmaster & Son on Iowa Lagos 166841; fifth, W. J. Dawson on Deomore; sixth, M. C. Bitterman & Sons on Rivoli 164861.

NATIONAL PERCHERON BREEDERS' FUTURITY.

Stallions (\$65, \$55, \$50, \$45, \$40, \$35, \$30, \$25)—First, Rookwood Farm on Jardine 165358; second, L. C. Altemeier on Maltais Wayne; third, Frank Keenan & Son on Jalo; fourth, J. O. Singmaster & Son on Maplegrove Chadwick 165649; fifth, J. O. Singmaster & Son on Iowa Lagos; sixth, W. J. Dawson & Son on Demore; seventh, M. C. Bitterman & Sons on Rivoli; eighth, Ernest L. Humbert on Rockway.

Stallion Foal (\$40, \$30)—First, W. D. Grove & Son on Smith Creek Lagos Jr. 166587; second, M. C. Bitterman & Sons on Isaie Aurore.

Mare Five Years Old and Over (\$40, \$30, \$25, \$15, \$10, \$10)—First, J. O. Singmaster & Son on Nacelle 99068; second, Dunhams on Moniton 106664;

LE SEUL

Grand Champion Percheron Stallion. Dunhams, Wayne, Ill.

third, W. D. Grove & Son on Keota Hyacinthe 62257; fourth, M. C. Bitterman & Sons on Queen Maltais 138544; fifth, Ames Brothers & Sons on Rowe's Lassie 100934; sixth, Dunhams on Margie 127652.

Mare Four Years Old and Under Five (\$50, \$40, \$30, \$20, \$10)—First, J. O. Singmaster & Son on Hazel 146129; second, Dunhams on Lottie 142575; third, Ames Brothers & Sons on Diamond 2d 148839; fourth, M. C. Bitterman & Sons on Falcon 136475; fifth, Ames Brothers & Sons on Liberty 143265.

Mare Three Years Old and Under Four (\$50, \$40, \$30, \$20, \$10, \$10)—First, J. O. Singmaster & Son on Jallop Beauty 150130; second, Dunhams on Bora 147968; third, L. C. Altermeir on Maltais May 152485; fourth, Ernest L. Humbert on Pearl 150675; fifth, L. C. Altermeir on Diamond II 165359; sixth, M. C. Bitterman & Sons on Lady Jalap 152897.

Mare Two Years Old and Under Three (\$50, \$40, \$30, \$20, \$10, \$10)—First, J. C. Redman on Heritage 161214; second, J. O. Singmaster & Son on Maplegrove Hazel 158611; third, K. A. Wilson on Shadyland Queen 164286; fourth, Iowa State College on Maplegrove Florence 158612; fifth, J. O. Singmaster & Son on Maplegrove Topsy 158917; sixth, W. J. Dawson on Jamina 157570.

Mare One Year Old and Under Two (\$50, \$40, \$30, \$20, \$10, \$10)—First, J. O. Singmaster & Son on Maplegrove Carrie 165650; second, Dunhams on Dunhams' Calistenette 164061; third, J. E. Smith & Sons on College Gem 159319; fourth, E. P. Hamilton & Sons on Maxine 166708; fifth, W. J. Dawson on Geneva 164320; sixth, N. M. Leonard on Mary Lee 165638.

NATIONAL PERCHERON BREEDERS' FUTURITY.

Filly (\$60, \$55, \$50, \$45, \$35, \$30, \$25, \$15)—First, J. O. Singmaster & Son on Maplegrove Carrie 165650; second, Dunhams on Dunhams' Calistenette; third, E. P. Hamilton & Sons on Maxine; fourth, W. J. Dawson & Son on Geneva; fifth, Frank Keenan & Son on Flashy Marseillaise; sixth, Lee

Bros. on Lagnola; seventh, M. C. Bitterman & Sons on Blanchois; eighth, E. P. Hamilton & Sons on Gereldine.

Mare Foal (\$50, \$40, \$30, \$20)—First, Ames Bros. & Sons on Rosella Ann; second, W. J. Dawson on Queen; third, Lee Brothers on La Maxine; fourth, M. C. Bitterman & Sons on Isaie May.

Mare and Foal (50 per cent each) (\$50, \$40, \$30, \$20, \$10, \$10)—First, W. D. Grove & Son on Keota Hyacinthe and Foal 62257; second, Ames Bros. & Sons on Rowe's Marie and Foal 91156; third, Lee Bros. on Castille and Foal 150262; fourth, M. C. Bitterman & Sons on Falcon and Foal 136475; fifth, W. J. Dawson on Ruby and Foal; sixth, M. C. Bitterman & Sons on Frances and Foal 82317.

Junior Champion Stallion (\$25, Reserve Ribbon)—Champion, J. O. Singmaster & Son on Fairholme Lagota Jalop 157209; reserve, Rookwood Farm on Jardine 165358.

Senior Champion Stallion (\$25, Reserve Ribbon)—Champion, Dunhams on LeSuer 150878; reserve, J. O. Singmaster & Son on Marg 128218.

Grand Champion Stallion (\$50, Reserve Ribbon)—Champion, Dunhams on LeSuer 150878; reserve, J. O. Singmaster & Son on Fairholme Lagota Jalop 157209.

Junior Champion Mare (\$25, Reserve Ribbon)—Champion, J. O. Singmaster & Son on Maplegrove Carrie 165650; reserve, J. C. Redman on Heritage 161214.

Senior Champion Mare (\$25, Reserve Ribbon)—Champion, J. O. Singmaster & Son on Jalap Beauty 150130; reserve, J. O. Singmaster & Son on Maplegrove Hazel 158611.

Grand Champion Mare (\$50, Reserve Ribbon)—Champion, J. O. Singmaster & Son on Jalap Beauty 150130; reserve, J. O. Singmaster & Son on Maplegrove Carrie 165650.

Champion Stallion Owned in Iowa (\$25, Reserve Ribbon)—Champion, J. O. Singmaster & Son on Fairholme Lagota Jalop 157209; reserve, Rookwood Farm on Jardine 165358.

Champion Mare Owned in Iowa (\$25, Reserve Ribbon)—Champion, J. O. Singmaster & Son on Jalap Beauty 150130; reserve, J. O. Singmaster & Son on Maplegrove Carrie 165650.

Get of Sire, Three Animals, Either Sex (\$40, \$30, \$20, \$15, \$10, \$10)—First, J. O. Singmaster & Son; second, Ernest L. Humbert; third, L. C. Altemeier; fourth, E. P. Hamilton & Sons; fifth, Ames Bros. & Sons; sixth, W. J. Dawson.

Produce of Mare, Two Animals, Either Sex (\$40, \$30, \$20, \$15, \$10, \$10)—First, J. O. Singmaster & Son; second, Dunhams; third, L. C. Altemeier; fourth, E. P. Hamilton & Sons; fifth, Ames Bros. & Sons; sixth, M. C. Bitterman & Sons.

Stallion and Three Mares Under Three, Bred by Exhibitor (\$40, \$30, \$20, \$15)—First, J. O. Singmaster & Son; second, E. P. Hamilton & Sons; third, W. J. Dawson; fourth, M. C. Bitterman & Sons.

Stallion and Three Mares Any Age (\$40, \$30, \$20, \$15, \$10)—First, J. O. Singmaster & Son; second, Dunhams; third, E. P. Hamilton & Sons; fourth, Ames Bros. & Sons; fifth, W. J. Dawson.

Five Stallions (Ribbon)—First, J. O. Singmaster & Son; second, Ernest L. Humbert.

Premier Breeder's Prize (to the breeder of animals winning the largest amount in prizes in the Percheron classes) (Special Premier Breeder's Champion Ribbon or Banner)—J. O. Singmaster & Son.

Individual Breeder's Prize (to the breeder of all first prize American bred animals in regular single classes) (Special Breeder's Ribbon)—Ed Seaman on Marg 128218; J. O. Singmaster & Son on Maplegrove Trojan 138951; Dunhams on LeSuer 150878; J. O. Singmaster & Son on Fairholme Lagota Jalop 157209; Rookwood Farm on Jardine 165358; W. D. Grove & Son on Smith Creek Lagos Jr. 166587; Martin Nelson on Hael 146129; John Taylor

on Jalop Beauty 150130; J. C. Redman on Heritage 161214; J. O. Singmaster & Son on Maplegrove Carrie 165650; Ames Bros. & Sons on Rosella Ann; J. O. Singmaster & Son on Keota Hyacinthe and Foal 62257.

Exhibitor's Prize (to the exhibitor of animals winning the largest amount in prizes in the Percheron classes) (Special Premier Exhibitor's Champion Ribbon or Banner)—J. O. Singmaster & Son.

SPECIAL PRIZES.

Offered by the Percheron Society of America.

Grand Champion Stallion and Mare, Bred by Exhibitor (Trophy)—Dunhams on LeSuer 150878; J. O. Singmaster & Son on Jalop Beauty 150130.

BELGIANS.

EXHIBITORS—E. L. Beard & Son, Decorah; J. August Carlson, Ogden; W. T. Davenport, Bradgate; W. B. Donelson, Ogden; C. G. Good & Son, Ogden; J. G. Hanmer, Ames; Chas. Irvine, Ankeny; Iowa State College, Ames; John Moon, Correctionville; G. Muench, Ogden; Simon Peterson, Ogden; J. C. Ritchie, Stratford.

JUDGE.....W. J. KENNEDY, Sioux City, Iowa.

Stallion Five Years Old and Over (\$50, \$40)—First, E. L. Beard & Son on Kaiser 10140; second, W. B. Donelson on Jupiter 2980.

Stallion Four Years Old and Under Five (\$50, \$40)—First, W. B. Donelson on Pioneer Masterpiece; second, Chas. Irvine on Attraction du Fosteau 10815.

Stallion Three Years Old and Under Four (\$50, \$40, \$30, \$20)—First, J. C. Ritchie on Irvinedale De Bree Eyck 11292; second, W. B. Donelson on Jupiter N. 11746; third, Chas. Irvine on Al de Bree 11696; fourth, J. August Carlson on Casino Jr. 11933.

Stallion Two Years Old and Under Three (\$50, \$40, \$30, \$20, \$10)—First, W. B. Donelson on Farceur Hero 12023; second, Chas. Irvine on Allen 12205; third, Chas. Irvine on King 12295; fourth, John Moon on Farceur Boy 12064; fifth, E. L. Beard & Son on Frisco 11913.

NATIONAL BELGIAN BREEDERS' FUTURITY.

Stallions (\$50, \$40, \$35, \$25, \$20, \$15, \$15, \$12)—First, C. G. Good & Son on Major Farceur; second, J. C. Ritchie on Louie de Maeter; third, Simon Peterson on Farceur's King; fourth, W. B. Donelson on Juan; fifth, John M. Moon on Long Tom; sixth, C. G. Good & Son on Senator Farceur; seventh, J. August Carlson on Belmont Farceur; eighth, Charles Irvine on Irvinedale Bob 12492.

Stallion Foal (\$50, \$40, \$30, \$20, \$10)—First, C. G. Good & Son; second, Iowa State College on Belmont; third, G. E. Muench on Farceur De Lamon; fourth, J. C. Ritchie; fifth, C. G. Good & Son on Oakdale Farceur.

Mare Five Years Old and Over (\$50, \$40, \$30, \$20, \$10)—First, C. G. Good & Son on Paramount Lulu 6014; second, Chas. Irvine on Irvinedale Rica 5294; third, E. L. Beard & Son on Lucy 5719; fourth, W. B. Donelson on Carmon Queen 6112; fifth, C. G. Good & Son on Oakdale Girl 6272.

Mare Four Years Old and Under Five (\$50, \$40, \$30, \$20)—First, J. C. Ritchie on Bonnie 6553; second, John Moon on Dina Chestnut 6924; third, E. L. Beard & Son on Queenie 6306; fourth, E. L. Beard & Son on Lulu 6722.

Mare Three Years Old and Under Four (\$50, \$40, \$30, \$20)—First, J. C. Ritchie on Janette De Maeter 7053; second, Simon Peterson on Echo Dale Charlotte; third, Iowa State College on Blaviette 7750; fourth, John Moon on Marvel's Queen 7778.

Mare Two Years Old and Under Three (\$50, \$40, \$30, \$20, \$10)—First, Chas. Irvine on Irvinedale Suzett 8342; second, C. G. Good & Son on Farceurette 8186; third, C. G. Good & Son on Farcetta 8185; fourth, W. B. Donelson on Nora F. 8146; fifth, E. L. Beard & Son on Rocelia 7964.

NATIONAL BELGIAN BREEDERS' FUTURITY.

Filly (\$50, \$40, \$35, \$25, \$20, \$15, \$15, \$10, \$8)—First, W. B. Donelson on Farceola; second, W. B. Donelson on Farce Juno; third, J. August Carlson on Belmont Minnie; fourth, W. B. Donelson on Farceila; fifth, Chas. Irvine on Springvale Katherine; sixth, J. C. Ritchie on Hazel De Mactes; seventh, E. L. Beard & Son on Sandra; eighth, John M. Moon on Carmen 2d; ninth, E. L. Beard & Son on Rose Marie.

Mare Foal (\$50, \$40, \$30, \$20, \$10)—First, C. G. Good & Son on Faretta; second, Chas. Irvine on Irvinedale Lizette; third, J. August Carlson on Belmont Lorette; fourth, Chas. Irvine on Springvale Beauty; fifth, C. G. Good & Son on Farletta.

Mare and Foal (50 per cent each) (\$50, \$40, \$30, \$20, \$10)—First, Chas. Irvine on Lista and Foal; second, C. G. Good & Son on Chere and Foal 2429; third, J. C. Ritchie on Lucile and Foal 6534; fourth, Chas. Irvine on Cora and foal; fifth, Iowa State College on College Dream and Foal 6762.

Junior Champion Stallion (\$25, Reserve Ribbon)—Champion, C. G. Good & Son on Major Farceur; reserve, W. B. Donelson on Farceur Hero 12023.

Senior Champion Stallion (\$25, Reserve Ribbon)—Champion, J. C. Ritchie on Irvinedale De Bree Eyck 11292; reserve, E. L. Beard & Son on Kaiser 10140.

MAJOR FARCEUR

Grand Champion Belgian Stallion. C. F. Good & Son, Ogden, Iowa.

Grand Champion Stallion (\$50, Reserve Ribbon)—Champion, C. G. Good & Son on Major Farceur; reserve, J. C. Ritchie on Irvinedale De Bree Eyck 11292.

Junior Champion Mare (\$25, Reserve Ribbon)—Champion, Chas. Irvine on Irvinedale Suzette 8342; reserve, W. B. Donelson on Farcula.

Senior Champion Mare (\$25, Reserve Ribbon)—Champion, J. C. Ritchie on Janette De Maeter 7653; reserve, C. G. Good & Son on Paramount Lulu 6614.

Selected Exhibit in Agriculture, by Student or School (\$4, \$2)—First, Polk County, Bondurant; second, Polk County, Elkhart.

DIVISION NO. 5.

Display of Cabinet Making, One Article From Each of Three Students (\$4, \$2)—First, Poweshiek County, Brooklyn; second, Dallas County, Waukee.

Applied Farm Record From Farm Crops Class, One From Each of Five Students (\$4, \$2)—First, Buchanan County, Lamont; second, Butler County, New Hartford.

Applied Farm Record for Animal Husbandry Class, One From Each of Five Students (\$4, \$2)—First, Winnebago County, Buffalo Center; second, Clayton County, Strawberry Point.

House Dresses, One From Each of Five Students (\$4)—First, Polk County, Runnells.

Exhibit of Any Selected Manual Training Product (\$4, \$2)—First, Poweshiek County, Brooklyn; second, Dallas County, Waukee.

Exhibit of Any Selected Agricultural Product (\$4)—First, Polk County, Bondurant.

Exhibit of Any Selected Domestic Science Product (\$4, \$2)—First, Story County, Milford Twp.; second, Polk County, Bondurant.

DIVISION NO. 6.

Illustrated Booklets.

Booklet on Any Farm Animal Topic (\$3, \$2)—First, Hamilton County, Kamrar; second, Jefferson County, Fairfield.

Booklet on Any Farm Crop Topic (\$3, \$2)—First, Hamilton County, Kamrar; second, Polk County, Elkhart.

Booklet on Any Farm Operation Topic, Such as Planting, Cultivation, Care of Farm Crops, Care of Fruit Trees, Harvesting, etc. (\$3, \$2)—First, Hamilton County, Kamrar; second, Polk County, Elkhart.

Booklet on "My Own Work and Pastimes" (\$3, \$2)—First, Polk County, Willard School, Des Moines; second, Story County, Roland.

Booklet on Any "Geography" Topic (\$3, \$2)—First, Page County, Clarinda; second, Polk County, Willard School, Des Moines.

Booklet on "Gardening" (\$3, \$2)—First, Polk County, Willard School, Des Moines; second, Hamilton County, Kamrar.

Booklet on "Iowa" (\$3, \$2)—First, Page County, Clarinda; second, Hamilton County, Kamrar.

Booklet on "My Club Work" (\$3)—First, Polk County, Bondurant.

Booklet on "My Trip" (\$3, \$2)—First, Polk County, Willard School, Des Moines; second, Polk.

Booklet on Cooking (\$3, \$2)—First, Polk County, Elkhart; second, Polk County, Crocker School, Des Moines.

Booklet on Sewing (\$3, \$2)—First, Polk County, Elkhart; second, Polk County.

Booklet on Any Household Industry (\$3, \$2)—First, Page County, Clarinda; second, Cerro Gordo County, Mason City.

Booklet on "Good Citizenship" (\$3, \$2)—First, Story County, Roland; second, Page County, Clarinda.

Booklet on "My Experience in Cold Pack Canning" (\$3)—First, Polk County, Bondurant.

Booklet on "Food Conservation" (\$3, \$2)—First, Page County, Clarinda; second, Scott County, Gilbert.

Booklet on "Health Conservation" (\$3, \$2)—First, Polk County, Elkader; second, Page County, Clarinda.

Booklet on "Community Sanitation" (\$3, \$2)—First, Page County, Clarinda; second, Scott County, Gilbert.

Collection of Six Booklets by Any School (\$4, \$2)—First, Madison County, Earllham; second, Hamilton County, Kamrar.

Collection of Twelve Booklets, by Any County (\$5, \$3)—First, Page County, Clarinda; second, Polk County.

DIVISION NO. 7.

Collection of Photographs.

Exhibit of Photographs by Rural One-Room School (\$5, \$3)—First, Page County, Clarinda; second, Cerro Gordo County, Lime Creek.

Exhibit of Photographs by Consolidated School (\$10, \$5)—First, Adair County, Orient; second, Polk County, Bondurant.

Exhibit of Photographs, Including All Classes of Schools Within the County (\$10, \$5)—First, Cerro Gordo, Mason City; second, Jefferson County, Fairfield.

DIVISION NO. 8.

Collective Exhibits.

Rural One-Room School Making Collective Exhibit, Entry by Teacher, or by County Superintendent (\$12, \$9, \$6, \$3)—First, Cerro Gordo County, Lime Creek; second, Polk County, Oralabor; third, Mitchell County, Osage; fourth, Polk County, Norwoodville.

Consolidated School Making Collective Exhibit, Entry by Superintendent (\$16, \$12, \$8, \$4)—First, Grundy County, Hudson; second, Dallas County, Waukee; third, Story County, Roland; fourth, Polk County, Elkhart.

Town School (Other Than Consolidated and of Less Than Two Thousand Population) Making Collective Exhibit, Entry by Superintendent (\$16, \$12, \$8, \$4)—First, Poweshiek County, Brooklyn; second, Worth County, Joice; third, Mitchell County, Osage; fourth, Polk County, Urbandale.

County Making Collective Exhibit of Rural One-Room School Work, Entry by County Superintendent (\$16, \$12, \$8, \$4)—First, Cerro Gordo County; second, Polk County; third, Jefferson County; fourth, Page County.

PART V

Annual Convention of the Iowa Farm Bureau Federation Des Moines, Ia., January 10, 11, 1922

ANNUAL REPORT OF SECRETARY E. H. CUNNINGHAM

The year just closed has been the most disastrous in its economic effect on agriculture that the industry has ever experienced. Not only has the individual farmer suffered severely by reason of the reverses that have affected his business financially, and which in many instances are most distressing, but the industry has suffered far more by reason of the blighting effect upon the mind of the people engaged in farming, who in many instances have come to feel that the country generally is not as serious in recognizing the deplorable conditions surrounding their interests as the well phrased and oft expressed sympathies would lead them to believe. The efforts of the organization have been constant and continuous. The results, while far from satisfactory, have nevertheless advanced the status of our organization and established a better understanding between the Groups, Classes and Interests of the Nation, and especially those who have always looked upon farm organization as being destructive rather than constructive, who are coming to have a better understanding of the fundamental policies on which we are building. The work has been retarded in some instances and made more difficult generally on account of opposition from many whom we had every reason to believe should have at least allowed us to carry on in our efforts, especially since they openly profess to be the friends of agriculture.

The members of the executive committee and the executive officers have given their best efforts to your interest. It has required discreet judgment on the part of everyone. Your officers must match their wits with the large and powerful combinations of industry who have the money to command the brains and ability of the world. We hope that the conditions under which they work and the accomplishments of the past year will have careful consideration by the membership.

The executive committee during the year have held nine meetings.

President Hunt has given every minute of his time to the duties of his office.

The time given over to the field and conference work by the president occupied 146 days of his time. Eighty-five days, general farm meetings; 3 days, community meetings; 9 days, executive committee; 13 days, district meetings; 33 days, general conferences; 3 days, national convention.

The duties of the secretary during the year have, as in the years past, covered a multiplicity of activities. To enumerate everything in detail would be tiresome and would serve no particular end, as it is not with

the details that the membership is as much concerned as with the final accomplishments.

The program and budget of \$115,000.00 adopted by the delegates to the last annual convention was approved by the executive committee to carry on the work as outlined. This program was adhered to and every department supported at an expense of \$86,352.18. The saving of \$28,647.87 from the budget was largely due to the merging of duties and co-operating with interests who showed a disposition to be helpful.

The total number of public meetings conducted by men sent out direct from the federation office during the year was eight hundred fifty-five.

The legislative committee consisted of W. P. Dawson, C. W. Huntley, and J. G. Mitchell. This committee performed a service unequalled in legislative activities on behalf of agriculture.

LEGISLATIVE RECOMMENDATIONS

Two legislative questions of major importance present themselves. The first lies in code revision, and the second in the prospective report of the legislative tax committee.

Should the next General Assembly undertake to consider code revision at the regular session a very careful analysis of the proposed bills is imperative. The importance of taxation measures presented by the tax committee require no special emphasis, especially if its report undertakes a recodification of the tax law of the state.

The importance of keeping close touch with the organization and operation of cooperative associations cannot be over-emphasized.

The work of the legal department during the past year resolves itself generally into three divisions.

I. Legislative work in cooperation with the legislative committee.

II. Taxation.

III. Advisory—particularly with reference to organization of cooperative associations.

I. This division may be considered with respect, (a) to legislation prevented and objectionable statutes repealed, and (b) to new legislation.

(a) In the first class may be included:

(1) The repeal of the statute permitting banks to deduct from their capital stock the amount of government securities held for purposes of taxation (Chap. 15, Laws of 39th G. A.)

(2) The prevention of a measure which would have subjected county mutual insurance associations to the disabilities of legal reserve companies.

(3) Prevention of consideration of Code Commission's bills during regular session.

(b) (1) To provide for appeal in case of platting for assessment and taxation.

(2) Prepared and secured passage of measure to include protection of river banks in the drainage law (Chap. 45, Laws of 39th G. A.)

(3) Prepared and secured passage of a measure to compel construction of spur tracks by railroads (Chap. 86, Laws 39th G. A.)

(4) Amendment of law relative to transportation of dead animals, to permit farmers to feed to hogs animals that have not died of any con-

tagious disease, and thus prevent blackmailing of farmers by owners of rendering plants. (Chap. 99, Laws of 39th G. A.)

(5) Provision for bonded warehouses. (Chap. 119, Laws of 39th G. A.)

(6) Cooperative Associations. (Chap. 122, Laws of 39th G. A.)

(7) Exception to statute providing for limitation of indebtedness of corporations, and making possible mobilization of agricultural credit. (Chap. 131, Laws of 39th G. A.)

(8) Provision for investment by state banks and trust companies in capital of corporations organized to extend agricultural credit. (Chap. 157, Laws of 39th G. A.)

(9) Same as to savings banks. (Chap. 161, Laws of 39th G. A.)

(10) Hog cholera serum law. (Chap. 170, Laws of 39th G. A.)

(11) To permit collective bargaining. (Chap. 176, Laws of 39th G. A.)

(12) To provide for collection of crop and livestock statistics. (Chap. 178, Laws of 39th G. A.)

(13) Assisted in preparation and passage of Blue Sky Law. (Chap. 189, Laws of 39th G. A.)

(14) Pure seed law. (Chap. 236, Laws of 39th G. A.)

II. Taxation. The committee consisted of F. D. Steen, Davenport, Charles Cessna, Grinnell, and D. W. Mott, Hampton.

A feature of the taxation problem exists in the appointment of a Tax Committee by the last General Assembly consisting of four senators and four representatives. The questions of land valuation were presented to this committee and a favorable hearing given.

CREDIT

In accordance with recommendations adopted by the delegates to the annual convention in January 1921, the plan for a farm crediting system to be established in connection with the present banking system of the state was put into effect. Permissive legislation was enacted and such an institution is now being organized.

TRANSPORTATION PROBLEMS

Forty-six transportation and railroad service complaints were entered. These were handled before the Railroad Commission or taken up direct with the railroads with the results that twenty-two were fully adjusted. Ten are now pending and fourteen on which no adjustment could be had.

COST OF PRODUCTION COMMITTEE

The cost of production work as directed by the committee, consisting of Ray Redfern, Fred McCulloch, George Koch, and J. H. Schroeder, and authorized by the program of work adopted has been carried through the year, one project in Marshall County under direct management of Mr. Warwick, and one in Shelby County under Mr. Whitson. The system as carried out under supervision of E. G. Nourse of the Agricultural Economics Department is recognized as the standard for accurate cost of production and operation of farm units in this State. The value of this work will become more apparent as the work of the ensuing years become available. It has paid returns upon the investment many times over through its use in the Grain Rate case before the Interstate Commerce Commission. The total cost of this project for 1921 was \$6,811.99.

FEDERATED SHIPPERS

The affiliated working agreement with the Federation of Cooperative Livestock Shippers was terminated January 1st. This work will be carried on the coming year as a livestock department of the Federation.

IOWA STATE COLLEGE OF AGRICULTURE

To the President, the Department heads, and their staffs we feel deeply obligated for the courteous and cooperative spirit they have always manifested. We have had the closest cooperation from the Extension Department of the College. It is with this department that we come in contact more frequently in carrying on our activities. We have always endeavored to reciprocate in kind for the many courtesies that have been extended, and appreciate the splendid spirit of helpfulness on the part of Director Bliss and County Agent Leader McDonald.

The women of our organization are more and more, I am pleased to say, coming into their own. This field of endeavor, while not new in its inception, is, however, comparatively young in aggressiveness and well directed effort.

STATE DEPARTMENTS, PUBLIC BOARDS AND COMMISSION

From every department of the State we have had the closest cooperation. Problems concerning individuals, communities, and counties are constantly up for consideration. Courteous consideration and a spirit of helpfulness in all matters submitted has been our experience.

The Iowa Railroad Commission and Commerce Counsel have been most zealous in their effort to assist us in righting many discrepancies, and in some instances unjust practices on the part of transportation companies. The unwarranted assumption of authority over intra-state transportation matters by the Interstate Commerce Commission, either assumed or authorized by statute has left our State Commission helpless to do the things that common sense and justice would dictate should be done. Congress has been appealed to for legislation correcting and restoring the powers of the State Railroad Commission in all matters directly affecting the State in relation to transportation questions. To this matter the Federation has pledged its wholehearted support.

SUMMARY OF ACTIVITIES OF THE IOWA FARM BUREAU
FEDERATION FOR THE YEAR 1921

I. REPRESENTATION

The interests of farmers have been represented by the I. F. B. F.

1. At all legislative sessions of the 39th (1921) General Assembly.
2. By the I. F. B. F. working in cooperation with the A. F. B. F., particularly
 - (a) On National Legislative problems
 - (b) Before the Interstate Commerce Commission
 - (c) In taxation problems
 - (d) On Marketing plans
3. Before the Executive Council (State) in the establishing and equalization of values for taxation purposes.

4. In defending land values before Federal Court hearings in the railroad injunction suit.
5. At numerous hearings before Commerce Counsel and Board of Railroad Commissioners; also (State) Animal Health Commission.
6. In the Code Revision of two hundred fifty-three Iowa laws pending future action.
7. In important conferences and meetings with Iowa bankers, and Federal Reserve officials which resulted in relieving the critical financial situation for Iowa farmers.
8. Before State Board of Education procuring adoption of courses of study to the Practical Marketing Problems.
9. At meetings and conventions of various labor and commercial organizations whenever and wherever it seemed fitting and proper.
10. At meeting between Executive Railway heads, heads of Federation of Railway Labor, Chicago, Illinois.

II. LEGISLATIVE ACCOMPLISHMENTS

The principal legislative accomplishments of the I. F. B. F.

1. Prepared and secured the enactment of laws providing for co-operative marketing and proper financing for the farmer, encouraging permissive and corrective legislation for protecting the agricultural interests. We quote from a reprinted edition of the October, 1921, issue of the Iowa Journal of History and Politics, page 102, as follows:

"No class of people in Iowa profited more by the legislation of the Thirty-ninth General Assembly than the farmers. Working through the powerful Farm Bureau Federation the agricultural interests secured the enactment of almost all the legislation they desired."

2. The Secretary of the I. F. B. F. made several trips to Washington, D. C., during the year 1921 where he met with the Iowa Congressmen and various other officials, cooperating with the A. F. B. F. officials there, before Agricultural Commission, Congressional Committees on Federal Farm Land Bank asking minimum be raised to \$25,000.00 on loans, on Packer Control Bill, Board of Trade Bill, War Finance Corporation, etc.

III. HELP ON MARKETING PROBLEMS

1. Prepared laws passed by Thirty-ninth General Assembly which
 - (a) Legalized "Collective Bargaining."
 - (b) Provided for incorporating of "non-profit, non-stock" cooperative associations.
 - (c) Provided for bonded warehouses in Iowa.
2. Gave \$10,000.00 toward financing work of Grain Marketing Committee of Seventeen.
3. Gave \$6,500.00 toward Livestock Marketing Committee of Fifteen work.

IV. CREDIT AND FINANCING

1. Prepared and secured enactment of a law providing for the formation of a farm credits corporation which will enable farmers to

secure the long-time credit which they need, at a reasonable rate of interest.

2. Counselling with the officials of the Federal Reserve banks resulting in the continuation of credit to farmers even after the policy of calling in all loans had been adopted.

V. TAXATION

The I. F. B. F.

1. Secured information from various sources at considerable expense which was used before the State Executive Council for the purpose of reducing land values to a 1919 taxation basis for the 1921 assessments. Professor Brindley of the Iowa State College makes the statement: "The Farm Bureau Federation had the first representatives of the land owners to appear before the State Executive Council. Never before have the farmers' interests in this line been supervised before this body."
2. Secured the equalization of valuations of the various classes of livestock over the State.
3. Directed the County Farm Bureaus' Taxation Committees in appearing before the County Assessors and Boards of Supervisors to see that all local assessments were properly equalized.
4. The attorney of the I. F. B. F. represented the farmers' interests of Iowa in the hearings before the Federal Court in the injunction suit brought by the railroads.

VI. TRANSPORTATION

The principal activities in transportation matters have been:

1. Secured passage of the spur track bill, which gives Board of Railroad Commissions power to require railroads to provide spur tracks and grant sites where evidence is produced that the same is needed.
2. Secretary Cunningham appeared before the Interstate Commerce Commission at Washington in hearing for lower grain rates. Mr. Nourse also appeared. They read into the records the Cost of Production figures.
3. Presented the cases of local shipping associations and elevators before the officials of railroads so that improvement in operating service, repairing and enlarging stock yard equipment, etc., has been brought about.
4. Relieved the car shortage situation at times when local stations were unable to secure relief by conferring especially with the higher officials of the railroads when local agent was unable to get results.
5. Has appeared at all important hearings before the (State) Commerce Counsel looking toward better service and reduction and readjustment of freight rates.
6. Has helped to secure sites for elevators, warehouses, scales, etc., when local organizations were unable to get results.

VII. COST OF PRODUCTION

One of the most valuable lines of work conducted by the I. F. B. F. has been to accurately determine the cost of production on farms in Iowa.

As to the real value of these figures, Secretary Coverdale of the American Federation, has stated that this was one of the best pieces of work done anywhere in the United States since the consuming public knows that the farmer is not a "profiteer," and also farmers realize their own personal situation and can govern themselves accordingly.

The I. F. B. F. has used these figures:

1. For general publication in every newspaper or agricultural journal or any publication that wanted to use them.
2. Before the Executive Council in considering taxation.
3. Before the Interstate Commerce Commission, Washington, D. C., in asking for lower freight rates.

Their particular value to farmers is because the average farmer is not in a position to go into the detail required, though he could help very materially in keeping the standard farm business record account book, and also in keeping special enterprise records, like the cost of producing some one particular crop on his own farm.

VIII. PROTECTIVE MEASURES

The following protective measures were enacted into laws by the last legislature:

1. Pure seed law known as the "uniform seed law," so that Iowa farmers have protection against buying seeds which contain obnoxious and unlawful weed seed.
2. Anti-hog cholera serum regulation law, which provides for the bonding of dealers in serum and requires manufacturers to publish on the containers the cost price of the serum, and thereby preventing the undesirable practice of "rebating."
3. Provide for county vaccinating schools so that farmers can take instructions and examinations in their local counties in order to secure permits to vaccinate their own hogs against hog cholera.
4. Has discouraged the buying of blue sky stock by requiring companies to submit answers to an analyzing questionnaire, and helped to get the blue sky law passed in the last session of the legislature.

IX. AGRICULTURAL STATISTICS

The I. F. B. F. sponsored the enactment of a law for the purpose of gathering of statistics by the assessors and providing for the assembling and dissemination of them for the entire State a short time after the assessor's work is complete. Thus accurate information as to the amount of grain and livestock on farms is available for all the people and not for any particular class as has often been the condition existing in the past.

X. PUBLICITY

The publicity activities of the I. F. B. F.:

1. It has published monthly the Messenger and sent the same to every member so that they could be familiar with the activities and development.

2. Has prepared timely news articles and sent them to local newspapers whenever there was "news" deserving general publication.
3. Has provided agricultural journals with information concerning the activities and undertakings of the organization.
4. Carried the work of the Farm Bureau to thousands of people through the many hundreds of public meetings held throughout the State at which times Federation speakers appeared.

XI. SOURCE OF I. F. B. F. FUNDS

Question: Whose money from Iowa was used in financing the Committee of Seventeen and the Committee of Fifteen work?

Answer: Only that contributed by the I. F. B. F.

Question: Did this money come from taxation sources?

Answer: Absolutely no. The Federation is supported by a fifty cent (50c) membership dues that is paid directly by the County Farm Bureaus out of the individual members dues. The Federation has never received any funds from any source other than individual Farm Bureau members.

XII. AFFILIATIONS AND PURPOSES

Question: Is the I. F. B. F. affiliated with any other organizations?

Answer: No, the I. F. B. F. is not in any way attempting to tie up with other organizations of any character. Its membership is open to all bona fide farmers whose views are governed by only high ideals and look upon agriculture as a permanent business. Further, the organization has no political or sectarian affiliations, and every member has a voice in its proceedings. Its activities are broad enough to cover every agricultural line of endeavor. It is not limited in its scope of usefulness nor breadth of vision. It can and does go over the whole field of agriculture. It invites the hearty cooperation of all agricultural and industrial organizations and stands ready to lend aid and support to any organization that has for its purpose the welfare of agriculture.

RECOMMENDATIONS FOR 1922

1. Recommend that U. S. Grain Growers as now being organized be encouraged and cooperative assistance be given in this work wherever possible in carrying out its plans in this State.

2. Recommend that special emphasis be placed upon the work of developing and making effective the plan of the National Live Stock Producers' Association during the coming year.

3. Recommend that a committee be appointed to study the question of taxation from the standpoint of State levies and expenditures as a guidance in determining the need of further legislation. Also recommend that each County Farm Bureau adopt as a part of its program of work a study of county and township taxation in order that intelligent understanding may be had as to receipts and expenditures of all public funds in the county with a view of bringing about such changes as will tend to reduce taxation to a minimum.

4. Recommend that a committee be appointed to outline a plan for a state-wide farm-to-market road system, and that the committee make a thorough investigation of the subject and invite other farm organizations

and leading farmers and taxpayers into their council in order that public sentiment may be crystalized upon some practical road plan that will give the State a system of roads at reasonable cost. We recommend that emphasis be placed upon the secondary road system and the following phases of the subject should be emphasized:

- (a) That the farm-to-market road shall be well drained, well graded, and (when approved by the taxpayers) gravelled.
- (b) That all secondary county roads shall be constructed and maintained under the authority of the county boards.
- (c) That a portion of the automobile license shall be retained by the counties for use on the secondary road system.

5. Recommend that the corn acreage reduction, if adopted, be handled through the County Farm Bureau Committees in each county. The policy to be followed to be outlined by the Executive Committee of the Federation in order that the plan may be uniform throughout the State.

6. Recommend that the convention, so far as possible, outline to the Executive Committee its desire in regard to the extent the State Federation should go in advocating and encouraging National legislation and other national problems of agriculture beyond its present policy of working with and through the American Farm Bureau Federation.

ADDRESS OF GOVERNOR N. E. KENDALL

Mr. Chairman; Ladies and Gentlemen:

I was in Washington for three days in the month of December, and at a dinner attended by all of the congressional delegation, I undertook to detail to them the deplorable plight of agriculture in Iowa. I know I have been criticized somewhat because I haven't maintained a more optimistic view of the situation. I go occasionally to dinners and banquets where some well-dressed men from the east delivers an address after a very full meal when men are more inclined to be optimistic than at other times, and he tells us that we are past the worst, that we are out of the depression and just ahead of us is the promised land. I wish I could believe that, but I know the situation in Iowa and I know that the agricultural interests of this state have got to have relief, and they have got to have it now.

I spent two hours trying to impress upon our delegation at Washington the conditions which prevail in Iowa; that men who have been regarded as solvent all through the years that have passed are now in straightened circumstances. My friends, we mine a little in Iowa, we manufacture considerably, but our basic industry is agriculture, and the stress through which we are now going doesn't merely involve agriculture, it involves every legitimate business in our state—manufacturing, mining, jobbing, wholesaling—everything is dependent upon the industry in which you are engaged, and I say that there can be no permanent prosperity in the Mississippi valley until those who produce food commodities are enabled to market them at a reasonable margin of profit.

So that it is not a question entirely of farm profits. I heard a man say the other night that the farmers enjoyed fabulous prices during the World

War and that now they must take the consequences of the depression. That is a superficial view, it is a fallacy. I grant that during the war, measured in money—mark what I say, if you please! During the war, measured in money, the prices of farm products were high, but measured in things that the farmer had to buy they were not relatively high. During that great period of strain, while the manpower on the farms was depreciated 45 per cent because the patriotic boys in agriculture went to war, while it was depreciated 45 per cent, under the injunction of work and produce, we increased the production more than 29 per cent—a magnificent tribute to the fidelity and patriotism of the men and women engaged in agriculture in our state. Now we have fallen upon perilous times. Taxes are inordinately high. I got a letter from an old man the other day. It is not a singular letter; it is a typical letter. He said that thirty-five years ago he and his young wife went out to one of the counties of northern Iowa—everything was a wild prairie, no telephones, no railroads, no electric light plants, no rural mail delivery, nothing but a vast expanse of unimproved country. They bought a little piece of land there and settled, he and his wife. After a while a baby came. They bought more land, and then another baby came, and then another and another—five in all, and he acquired a modest competence because of his integrity and frugality throughout the thirty-five years. As the children grew up he gave them an education, and one by one they married and left, and finally the old man and lady found themselves possessed of 208 acres of land as they approached the twilight of life. Active operation of the farm was impossible for them so they concluded to rent their farm and enjoy the proceeds for the remainder of their days. They rented it for five dollars an acre. The farm lay within a consolidated school district and within the zone affected by one of these great highways that had been improved, and while his rent was five dollars an acre, his taxes were five dollars an acre also, and he asked me what he should do.

Well, there wasn't anything for him to do excepting impair the principal that he has been for thirty-five years laborously assembling. That man had made all the contribution to society that any man should be asked to make. He had devoted a lifetime to developing a farm; he had established a home; he had supported a church; he had reared up a family of splendid citizens for our country, and he comes now after all these years to a time when his property will not yield him revenue sufficient to provide for his simple and frugal wants. That is simply a typical case. Our taxes have grown to be an inordinate burden upon our people, and they must be reduced.

We have got to have different principles from those we have heretofore accepted. During the war we became intoxicated with the insanity of extravagance, and that applies to you men and women who sit before me as well,—in the nation, in the state, in the county, in the school district, and in the individual.

We have 480,000 automobiles in this state. I estimate that on an average \$100 a year is spent on each for useless traveling, joy-riding, visiting that we might better devote to the reading of good books. That means approximately 50 million dollars annually that might be saved with proper

prudence, and we have got to re-establish the old principles of economy which characterized the men who made this great state in our land.

When I was in conference down at Washington, some of the congressmen there—not alone from Iowa, but some to whom I had written who I had known when I was in congress myself—I thought displayed a little impatience with me for writing so much. They said “You have given a lot of free advice,” and I said “Yes, since I have quit practicing law, my advice is free to everybody.” And they continued “You have been talking about the deplorable conditions in Iowa and elsewhere—what would you do if you were here?” and I replied “That is a fair question, and I don’t intend to try to shirk it.” “What would you do for the relief of agriculture if you were in congress and had the responsibility,” they inquired. “Well,” I said, “That is a fair question and I am going to undertake to answer it. In the first place, I would bring all the pressure in the government to bear toward a reduction of freight rates in the United States. Everybody concedes that they are extortionate at this time and they are having the effect on the farmer to throttle his market, and the businessman to impede his trade, and on the manufacturer to close down his shop.” Why, twenty years ago nobody would have expected that the time would ever come when the great carrier corporations of our country would exact such tribute as they are now receiving.

Well, I must pass from freight rates. One of the congressmen down there said “What further?” I said “We have 120-million bushels of surplus corn in Iowa—old corn—corn of 1919 and 1920. I agree that we ought to have sold it, but we didn’t sell it. Some of us were offered \$1.70 a bushel for it and we thought maybe it would go to \$2.00 and we held on; others couldn’t get freight cars to ship it. Anyhow, there is 120 million bushels of old corn there. The foreign governments owe the United States 1 billion 250 million dollars of accrued interest on loans we made them during the war,” and I said, “If I were running this thing I would collect one-half of the interest due us on foreign loans; I would come out to the Mississippi valley and would buy every bushel of corn here at 50 cents a bushel, ship it to Armenia and give it to the starving people of the world.” Why not? There isn’t a week goes by that somebody doesn’t appeal to your generosity out of your private fund to relieve distress some place in the world, and we have got to do it as humanitarian people, so let’s do it in the manner suggested and save the starving babes and at the same time create a market for the products of the farm. Let me say this to you, our situation here will not be substantially or permanently relieved merely by the extension of credit. This is not a question exclusively of credits. What we want is not some arrangement made by which we can borrow money from Peter to pay Paul. What we want is a condition created whereby we can sell what we have produced at a fair profit and liquidate old debts, instead of incurring new debts. That is what we want in Iowa. “Well,” one of those congressmen (not from Iowa, however) said, “That’s pure paternalism.” And I replied, “What is section 15-a of the transportation act except paternalism? We selected one industry in that act, and,” I said, “no matter how prostrate agriculture is, no matter how universal unemployment is, this industry must have 6 per cent on an inflated investment—what is that but paternalism?”

You ought to take action in these matters, and you ought to let the congress at Washington know how you feel upon these vital subjects that affect your prosperity. Let the government collect the interest. If Great Britain can maintain an elaborate royal family at an expense to the taxpayers of 9 million dollars a year, with castles and estates and all those things that go with royalty, then it ought to be able to pay us the interest on what it borrowed from us. And when that interest is paid we can relieve a desperate situation yonder in the Orient and we can make our farmers' situation in the Mississippi valley easier, and when the farmers get to selling their produce at a fair margin of profit, the wheels of industry will begin to revolve as in former times. We have got to have a market, and right away, unless we expect to see disaster more acute than it has been up to this time. Paternalism? Yes, it is paternalism, but in ordinary times rational minds will discountenance it, but these are not ordinary times. We are passing through desperate times, and if we can send 20 million bushels of corn to relieve starving Russia, if we can make these fabulous contributions of public moneys to relieve people five thousand miles away, can we not make something to relieve the men and women in this country to influence the return of prosperity to this country?

We talked to the farmers for years "Work and produce," "Work and produce," "Work and produce,"—a slogan that took hold of everybody's imagination, but farmers are just like other people, actuated by impulses just like other people, and are they going to work and produce unless that production shall result in a profit? I heard men advise the burning of corn and the restricting of acreage next year. I don't know what your views may be, and I am not going to conceal what mine are. I am a plain man and I speak what I believe. Whether you agree with me, or not, I say this, when three or four hundred millions of people are starving to death—your brothers and mine under the spiritual law—when those people are starving to death, the idea of restricting or destroying a food commodity is repugnant to me. There is some other method by which we can bring relief.

Well, I said another thing. We have started now with the War Finance Corporation, and I hope it may result in great benefits. I am a little apprehensive that the conditions are too oppressive to make that relief universal and general. I said to these men down there "Here is the Federal Reserve Bank law, the basic law. If I were in congress I would introduce a bill to take from that law that clause which prohibits the government from dealing directly with the borrower." Take South Dakota up here, if you please. They have a rural credits law there, operated splendidly, and we must have one in Iowa. We started on one last winter, but there were influences too powerful—.

Here is another plan that is worthy of consideration, and I hope you may consider all of the things I have said. Suppose that the United States government should announce that it would establish a dozen warehouses in Iowa and that it would issue warehouse receipts for 50 cents a bushel for every bushel of corn deposited there, those warehouse receipts to be the basis of credit with the government of the United States. There would not have to be a bushel of corn deposited in those warehouses be-

cause whenever it became understood that Uncle Sam intended to issue a warehouse receipt for whatever amount of corn was there deposited, instantly every bushel of corn in the state would appreciate to that price and we would start again the wheels of industry in our state. But that was condemned as socialistic, and, as I said a while ago concerning the other program, it would be discountenanced if conditions were normal, but I have in my mind and heart the thought that the farmers in Iowa have got to have relief and I am willing to stretch any constitution and any law in order to afford them relief at this time.

These are some of the things that I think are proper to be considered by this great organization. I congratulate the farmers of the country that they are establishing and maintaining these great organizations. I believe that there has been more accomplished for agriculture in the past three years in our national congress than in any period of years previous in the history of our country, and it has been because the Farm Bureau and the Farmers Union and the Grange and the Society of Equity and the other great organizations of agriculture have been at Washington and been on the job. These are all things that I think you ought to consider and confer among yourselves about. Take up the question of taxes and help us find some solution of the situation that now confronts us. Nobody ought to be allowed to escape his fair share of the burdens of our government, but we don't want to pay more than we should, and we don't want any discrimination made in favor of anybody.

Last summer we made and engaged in a systematic and laborous effort to ascertain the value of railroad properties in Iowa. It is true that in a great majority of cases the railroads themselves do not contribute anything toward informing the public as to what their fair value is. Some months ago the railroads themselves filed with the Interstate Commerce Commission a statement of their value for the purpose of rate-making. You know that under the transportation act it provides that rates shall be fixed upon the valuation of the railroads at such figures as would afford them a return of $5\frac{1}{2}$ or 6 per cent, so that it became necessary for the Interstate Commerce Commission to ascertain the value of the railroads of the country. They went down to Washington and filed certified statements as to their value. I remember the Burlington railroad asserted that it was worth 451 million dollars, and the Interstate Commerce Commission fixed the rates upon that valuation, and you, if you are a shipper farmer, and as a farmer you are a shipper, you are paying the present scale of freight rates upon that valuation. When we came to make our assessment last July, the whole company of railroads appeared there and I was amazed to discover that they were almost all ready to go into insolvency. They came down there and represented that while they had made that statement to the Interstate Commerce Commission, it was radically too high, and that the real value was something less than one-third of that amount. A very interesting thing occurred. I remember the Illinois Central railroad company—and I don't speak in disparagement of it, because it is a splendid company—certified to the Interstate Commerce Commission that its property was worth 284 million dollars and the rates were fixed on that basis. In the hearing before the executive council, Mr. Talbot, the tax commissioner of that railroad, represented to us that it was worth less

than 200 million dollars. I was on an Illinois Central dining car some time after that and there on the back of the menu was an open letter to the public signed by the president of the Illinois Central road who said that the valuation fixed by the Interstate Commerce Commission was vastly less than the real value of the railroad. I am referring to that as simply illustrating the method pursued by one industry in our country to escape the fair proportion of the burdens of government. What do they propose? They propose one value for rate-making purposes and a vastly smaller value for tax-fixing purposes.

I believe you do not agree to that method. Anyhow, I am going to say this, as long as I occupy my present position I do not intend to allow that transparent hokus-pokus to be perpetrated upon the people of Iowa. We are all proud of our country; we are all proud of our state; these taxes have got to be raised, and I am sorry that the congress in discharge of what they believed their duty to be removed taxes on excess profits. I believe that the men who derive excess profits should pay taxes upon them. And now what a spectacle they have presented, when they have struck down the tax on luxuries and intend to put a sales tax on all of the necessities of life that the average must pay.

I leave you this situation. You keep in communication constantly with the men who make your laws and the men who execute them.

I thank you very much indeed!

ADDRESS OF J. R. HOWARD, PRESIDENT AMERICAN FARM BUREAU FEDERATION

It is a great pleasure to be present today at this, your third annual convention of the Iowa Farm Bureau Federation. It was just a little more than three years ago that the Iowa Farm Bureau Federation had its origin at Marshalltown. It was less than three years since first steps were taken at Ithaca, New York, toward the organization of the American Farm Bureau Federation, and not two years since the National organization became permanent.

It is my purpose today to review briefly three of the lines of work which the American Farm Bureau Federation has been doing in order that you may judge whether or not our stewardship of fifty cents out of your membership fees has been well invested.

I—COOPERATIVE MARKETING

The cooperative marketing movement is a protest expressed in action against excessive margins and distributive costs. It is no new thing. It has been successfully carried on in European nations for a hundred years or more. Within less than fifty years Denmark has thrown off the yoke of the agricultural economic oppression through cooperative marketing and has so reduced distributive costs and profits that the producer receives 72 cents of the consumer's dollar, and through cooperative marketing has rebuilt her entire national prosperity.

For years there have been efforts in this country along cooperative marketing lines. Some of these have been failures, others successful.

None of these, however, have ever gotten beyond the local field. They have been fostered under a number of heads or agencies with no coordination or cooperation between them. We have not had a unified cooperative movement in America but the hit and miss cooperation.

The American Farm Bureau Federation is not and never will be a marketing organization. Its business, or mission is largely promotional and educational. We have always taken and still hold that our mission toward cooperative associations under whatever name or organization they may be functioning is that of helpfulness and not domination. Actuated by this spirit we have established committees whose members comprise representation from various successful organizations, for the study of grain, live stock, dairy, fruit and wool marketing. The reports of the grain and live stock committees have already been made to joint meetings of various farm organizations, accepted and national marketing associations are now being perfected.

Opposition is being strenuously made from two sources—one from the already firmly entrenched and established distributive agencies with whose profits cooperation will interfere. More money has been raised to defeat this work than the American Farm Bureau Federation has yet spent in all its activities. The second line of objection is internal. It comes in the main not from the farmers, but from the leaders of farmers' movements who too often are more interested in their jobs than in the welfare of the farmers themselves.

That my own skirts may be clear and that the American Farm Bureau Federation may never be accused of building up a self-perpetuating, or a political machine, I am resolved to return at the earliest moment to the ranks and carry out the aspirations of my life up in Marshall County.

In spite of opposition from without and dissension from within, the United States Grain Growers are making continual progress. A leader in Minnesota said to me the other day that the movement was ordained of God for the welfare of mankind, else it could not continue to grow in membership and favor in the face of this opposition.

The reports of last Saturday night shows that the United States Grain Growers have under five-year contract 36,500 members, and an annual marketing of nearly 80,000,000 bushels of grain. These contracts in the hands of any old line grain company would be easily worth \$2,000,000, but they are not transferable.

The work of the Central Cooperative Live Stock Commission Company at St. Paul, fostered by the Minnesota Farm Bureau Federation, as well as the Farmers' Union Cooperative Live Stock Company at Omaha, indicates the immense savings of the livestock shipper which are to be had through cooperative selling. The work of the Livestock Committee of Fifteen will be pushed forward at all terminal markets by the National Livestock Producers' Association, the directorate of which has been selected by the Executive Committee of the American Farm Bureau Federation. The stirring of dry bones of the terminal exchanges already indicates the fight is on. Material saving in producers' selling costs will result.

It is my conviction that cooperation offers the way of escape from the threat of socialism. Even some farmers who would quickest resent the

idea of the government operating their farms are clamoring for government action in other lines, not realizing this government ownership of our farms is part of the whole plan.

Cooperation is the antithesis of socialism. It is self-help as opposed to state activity. Those who make proper use of cooperation become stronger to do for themselves what they would otherwise ask the government to do for them.

Cooperation will do all that socialism can do and will still retain the priceless advantages of individual initiative. Socialists wish to discard profit. The cooperative organization substitutes the patronage or service dividend for the capital dividend. Socialists wish to have wealth more equally divided. The cooperative corporation limits the ownership of its shares thus diffusing the advantages which may come from the enterprise. Cooperation is an important agency and will become increasingly influential in minimizing profiteering and promoting a high general standard of living.

The American Farm Bureau Federation is definitely committed to the furtherance of cooperation through already organized, or yet to be organized societies.

II—TRANSPORTATION

One of the first departments which the American Farm Bureau Federation organized was that of transportation. This department has attended many hearings and functioned to the benefit of the membership in various ways. Let me, however, specifically call your attention to four things which we have done, all of which have resulted in economies of freight payments to our membership:

1. Following the passage of the Cummins-Esch Act it was incumbent upon the Interstate Commerce Commission to make a readjustment or revision of rates which would, in the judgment of the Commission, satisfy the provisions of the law regarding guarantee returns. That immediately brought up the matter of railroad valuations. The manufacturers and business interests of the country, who were able to pass their freight payments on with their invoices, were not concerned regarding costs of transportation. Those financial interests of the country which are particularly interested in railroad questions and the market for stocks and bonds were glad to see the railroads liberally dealt with. It was only the farmer whose freight bill is subtracted at his own station from the price which he receives for his commodity and who can in no way pass on charges to the next man, who was concerned. At this hearing no farm organization other than the American Farm Bureau Federation was represented. The railroads asked for a property valuation upon which their rates should be based, amounting to many millions of dollars more than the market price of all their outstanding stocks and bonds. I have in my office the record of this fight by Mr. Thorne, covering more than three thousand pages. The result of it was that the Interstate Commerce Commission lowered the carriers' asked-for valuation one billion seven hundred million dollars, or practically 10 per cent. Mr. Thorne's own estimate is that this resulted in a net saving of \$30.00 per annum to every farmer in America. At that our contention was and still is that the allowed val-

nations were excessive, and we have been gathering information which we hope will result in lower valuations at subsequent hearings.

2. Following the advances of August 25, 1920, the American Farm Bureau Federation asked immediately for reductions on some of the commodities which were hardest hit and was successful in a few cases and in particular regions. The first important reduction case was the live stock case of last April, at which we appeared in conjunction with certain live stock associations, but no other farm organization, asking immediate reduction on live stock rates. We were successful in securing a 20 per cent reduction on the longer hauls of live stock. This did not affect the Iowa producer, but was of much value to the range man.

3. In August we entered into an extensive case before the Interstate Commerce Commission at Washington for reductions on hay and grain shipments in connection with the state railroad commissions in states west of the Mississippi river. The case was filed jointly by the Commissions of the States and the American Farm Bureau Federation. No other farm organization rendered any financial assistance. None of them gave any testimony or entered any protest whatsoever with the single exception of the Grain Dealers of Nebraska, who presented one witness. This hearing lasted throughout three weeks and has resulted in a reduction of rates amounting, on an average, to 16 per cent.

4. Because of the slowness with which the Interstate Commerce Commission reached its decisions and the expense of long drawn-out hearings and because of the uncertainty of any relief regarding rates through legislation, and after conference with members of the Executive Committee recently, I called personally upon a number of railroad executives, urging upon them the seriousness of the farmer's condition, and the part which transportation had had in the whole economic depression, and urged general freight reductions as the quickest and most potent remedy.

At adjournment the executives promised they would submit this demand to the Executive Committee of the railroad executives, which they did October 8th. This Committee approved the proposition with an immediate 10 per cent reduction on agricultural products and subsequent reductions as I had asked for, but submitted it October 14th to a meeting of all the railroad executives in the country, which meeting did not at that time approve it, but which did approve later reductions as operating expenses decreased.

You are now getting, as a result of the work of the American Farm Bureau Federation, 10 per cent or more reduction on all your commodities with a definite recorded pledge for subsequent reductions as operating expenses decrease without the expense or delays of extended hearings. This reduction is effective, under agreement, for six months, and on the basis of the estimate that the farmer pays in excess of two billion five hundred million dollars freight every year, the 10 per cent reduction, alone, is saving for the farmers of America in outgoing freight many millions of dollars.

Some people raise a hue and cry against "big business," and a few have warned me to stay away from all conferences with railroad interests, packers, bankers and others of the so-called "big guns." My reply has always been that I am the representative of the biggest interest in Amer-

ica—American agriculture—and that it is the duty of those who represent, through their various organizations, the farmers of America, to sit across the table with any and every other interest where questions of large moment are to be discussed.

Our future policy is first to continue through the Interstate Commerce Commission and through conferences with railroad men to press for further material rate reductions and to continue to urge Congress to so modify the transportation laws as to do away with definite guarantees and excessive valuations, as well as the restoration of the proper authority of state commissions.

The great hope of the future in transportation for the whole Mississippi valley lies in the development of our waterways. The progress being made during the past two years on the lower Mississippi is indicative of the possibilities of both the upper Mississippi and the Missouri. We are watching this with great care.

The report of the International Joint Commission on the Great Lakes-St. Lawrence route is before Congress. This report makes it clear that by the opening of this great waterway ocean shipping and ocean rates can easily be brought 1,200 miles nearer to our farms. It is the greatest agricultural issue that has been before our nation in decades. You should lose no time in demanding quick and definite action regarding it.

III—LEGISLATION

One of the first departments established by the American Farm Bureau Federation was that of legislation.

When Congress convened last April the situation confronting both agriculture and industry had become so tense that a number of Congressmen who knew the actual condition confronting agriculture resolved it was time for something to be done for deflated agriculture in order to save not only the farmer, but the industries of the nation. They recognized the key to the situation lay largely in assisting agriculture to "come back." They sensed also the changed conditions. They realized a new era had come and with it a turn in the tide of basic productions. This resulted in the formation of that much discussed group in Congress, the agricultural bloc, which has to its credit more agricultural legislation in the extraordinary session than ever before was passed in a single sitting of Congress. Let me mention among them the aids to the Federal Land Banks, the War Finance Relief measure, the Packer Control bill, the Grain Control bill, the Farm-to-Market road law, and the emergency tariff.

Let me point out two essential differences between the agricultural bloc and the other blocs. First, the agricultural bloc is the only bloc which has been organized without selfish motive and in the interests of all our citizenry. Second, the agricultural bloc is the only bloc that has ever proceeded with its cards on the table face up and without secret or closed door caucuses.

The American Farm Bureau Federation has been faithfully and persistently pressing the needs of agriculture before Congress through the agricultural bloc, in cooperation with other agricultural societies, and through our own organization. We have had a vital part in the passing of needed

legislation as well as in the awakening of a national agricultural consciousness.

In conclusion may I draw to your attention what seems to me to be a new national alignment of farmers' thought and national farm organization activity?

There is clearly developing what is already called at Washington and by the press a radical agricultural group who advocate a policy of settling all our grievances, social, economic, or otherwise, through governmental mediums and agencies.

They believe in a thoroughly established state or national control of the regulation of human relationships.

They would settle all such problems as transportation by direct government ownership and operation of railroads and merchant marine, and bitterly oppose all farm organizations and leaders who are not of that mind.

They are beginning to talk of various artificial schemes of price fixing.

Some of them are avowedly in sympathy with the organization of new political parties, such as the Farmer-Labor movement or the plan of the Old Committee of Forty-eight or similar movements.

Do not understand that I say that such a movement has yet reached definite organization stages so far as membership following is concerned, but that the thought and tendency of certain leaders toward such an amalgamation is well defined.

These forces, in my opinion, will rapidly increase during the next few months in the event of delayed agricultural economic adjustments. When men, by strenuous and well applied labor, cannot make interest and taxes for continued periods, you must expect that many will see red.

Opposed to this group are those who are convinced by study or experience that in matters of business the state is less efficient than the individual; that while men make governments, governments cannot make men.

This group question the government's power to create or materially alter laws of fundamental economics any more than it can alter the ebb and flow of the tide.

They hold that the purpose of government is to so order conditions in fairness and equality that every individual citizen and class of citizenry can have the largest and fullest opportunity to develop the best that is in him or them.

Personally, I approve that constructive radicalism which provokes serious thought. It spells progress. It is evolution seeking the ideal trust of better things. I will go the limit regarding cooperative marketing, cooperative banking and government supervision of all public utilities; in opposition to all unjust and unfair combinations and competition, and the preventing and redressing of human wrong in every spot and place.

But I must draw the line on any and every ism that is destructive and not constructive, particularly if destructive of that greatest of all human agencies—personal initiative.

I deplore a growing tendency on the part, not only of some farmers, but other men in high places, to stress the functioning of government too much, and of the individual too little.

The nation's strength is that of its average citizen. A virile self-

relying, self-sustaining manhood and womanhood is of primary importance.

We are in government a democracy, and a democracy is a government of individuals. Submerge individualism under any form or name and your democracy is gone.

The stress of the times is terrific. The issues are momentous. They are being decided now on your own farms and in your own lives. I have the fullest faith in the future, because I have faith in you.

SPEECH OF PRESIDENT C. W. HUNT AT THE THIRD ANNUAL CONVENTION OF THE IOWA FARM BUREAU FEDERATION,
JANUARY 10-11, DES MOINES, IOWA

No nation can ever reach permanent greatness unless based on the well-being of the men and women who live out on the farm. We have been told that our farmers are more prosperous than farmers of any other nation. Whether this be true or not, it is generally accepted as true.

While it is true that our farmers today, or up till the outbreak of the world war, appeared to be better off than their fathers, after all the farm prosperity was more fancied than real.

Look up the history of the average farmer who started for himself forty years back and you will find his life was one of unremitted toil day in and day out. His accumulations of wealth are small compared with other lines of business, and are the result of persistent saving on the part of every member of the family. He has had no time for a summer outing at the lakes or winter sojourn in California or Florida. In the majority of cases he could not afford more than an eighth grade education for his children, and we find this man nearing the sunset of life broken in health, shoulders stooped, wrinkles of care on his face, and every evidence of the burden of incessant toil in his make-up as he retires to some town to await the final summons when he is at last called upon to shuffle off his mortal coil. After a few short years of retired life this man dies. The world says he has been a thrifty citizen, leaving a large estate to his heirs, who have gone to the city where they can enjoy society, good schools, fine clothes, and summer outings.

You say this picture is overdrawn, that farmers can now have automobiles, good roads, consolidated schools, community centers, fine homes with all the modern conveniences, water, electric lights, cement walks, improved machinery in the house and on the farm.

The last quarter of a century our government, both state and national, has given much attention to agricultural matters, but solely along the lines of increased production, and succeeded in many instances in doubling the former acreage yield.

This was all very well for a beginning, but efforts in the future should be spent for better business and better living conditions on the farm. The farmer must get a larger return in money, comfort and social advantages from crops grown.

The problem of farm life is and should be a national problem, for on the character of country population depends the permanent greatness of any state.

We are blessed today with a secretary of agriculture who realizes and sets out in his first report to the president of the United States the real condition of our farming population. From page twelve of his annual report I quote as follows:

"The drop in prices for crops in 1920 caused many renters to lose not only their labor for that year, but their savings as well. But for the leniency of their landlords, thousands upon thousands of other renters would have lost everything they had."

The secretary sets out clearly the attitude of other interests toward the farmer in the following statement: "The cynical or thoughtless man is disposed to say 'What have I to do with all this? Those unfortunate purchasers and renters exercised bad business judgment. They took their chance and lost. They are simply victims of business misfortune, and it is no affair of mine.'"

The solution of the present depressed condition on the farm will be found only when the price level of farm products are boosted up on a level with the price of organized labor, freight rates, interest rates, and other necessary commodities.

More than half of the farmers of Iowa are discouraged and disheartened today, and the world cannot prosper while full of hopeless, helpless farmers. The farmer knows that past debts, neither government nor private, can be paid with the present deflated dollar. Until the way is made brighter and hope and confidence is restored to the farming profession, we are simply going from bad to worse with present high interest rates, high taxes, high labor wages, and low price level for farm products. The farm indebtedness is simply being pyramided. Unless relief comes soon in the way of increased price level, the pyramid will fall of its own weight.

To gain a higher price level the farmer through his organization must develop a marketing system of his own. He has become wonderfully efficient as a producer, but the problem of marketing his products has been left entirely in the hands of the speculator and gambler with the result that marketing machinery has been built up to fill the pockets of the speculator, the commission merchant, and the money changer, leaving the farmer with a scant living and nothing in his pockets but holes.

If the farmer is to have a marketing system under his control, he must first get a system of finance adapted to his needs and under his control. You say that is dangerous? Let me ask, do not the packers control banks that answer their beck and call? Does not the Standard Oil Company control their own finances? The steel trust, etc. Then, pray, why not the farmer who produces billions of wealth every year, only to see it swallowed up by the grasping control of the money kings of our country? Paste this in your hat, or in your bonnet, where you will constantly be reminded that all of our marketing plans will fail utterly unless supported by an adequate finance. The grain marketing plan, live stock, or dairy marketing now under way will fail unless backed by sufficient finances under control of the farmers.

The grain dealers proclaim to the world that the present system of marketing is most efficient and practical. It certainly is a wonderful system that makes it possible to sell millions of bushels of grain in one

year on the Chicago Board of Trade when only a small fraction of this amount of real grain is sold at all markets in the whole United States during that period. It is also contended that the five big packers have attained perfection in the meat packing industry. This is probably true, but the economy goes into the packers' pocket. There is a wide spread between the price the feeder receives for the live animal and the price the consumer pays for the beef, pork or mutton which graces his table. The fact remains that the producer has been getting only about 40c of the \$1.00 paid by the consumer, and under present conditions he is getting a still lower ratio. There is a leak somewhere. In thinking this situation over, I have come to the conclusion that there are leaks all along the route. The pipe line connections are faulty from beginning to end. Transportation, commissions, yardage, feed, insurance, storage, dockage, shrinkage, grading, inspection, traveling salesmen, middlemen, wholesale and retail merchants, crips and dead, high freight rates and war tax. It is some wonder that we have even a grease spot left.

The farmers must gradually acquire a marketing system of their own. It has been said that the farmer does not understand the marketing game, and I think that is true, but the farmer has brains and he can learn marketing and become just as efficient in that line as he has been in the field of production. The marketing plans will necessarily develop slowly, but we must begin somewhere, so we have started to carry out plans fostered by the Farm Bureau Federation. We are going to make mistakes, but we must profit by those blunders and try not to make the same mistake twice.

The past year has been discouraging to the farmer, but plans have been started for grain, live stock and dairy marketing, and it will be our job the coming year to go on with this work, and we hope to make satisfactory progress with less mistakes than we have made in the year just closed.

As has been stated, there has recently developed determined opposition to the Farm Bureau Federation. We have been attacked by certain agricultural papers with wide circulation and by many jealous organizations. None of these attacks will stand fire when put to the test but, nevertheless, with the unrest among farmers in these trying times of world war reaction, these attacks are having their effect in adding fuel to the fire, and the coming year will be the testing period of our organization. I have little fear of the outcome.

The Iowa Farm Bureau Federation is starting on a new year. As it pauses to draw a good full breath and take into account the work ahead, it will resolve to go on pushing the marketing and financial plans already under way. It will plan to correct many mistakes made the past year, but it will have no thought of going backward or abandoning any projects already under way.

It expects to go on laboring for reduction in freight rates and trying to assist in working out a fair system for establishing taxation values. It stands for an interstate commerce law that will allow just rate reductions and the return of authority of our Iowa Railway Commission over intrastate traffic. It stands squarely behind the agricultural bloc in congress, commending it for the beneficial agricultural legislation already

passed, and pledges its support in further constructive legislation for the benefit of agriculture.

We need more knowledge and reliable data on agricultural economics and statistics in order that we may more intelligently adjust our production to the probable demand of the various farm products. We should ask the secretary of agriculture to gather and interpret such economic and statistical data. Secretary Wallace has made recommendations of this sort, and I understand the statistical department of the American Federation will gather data from the Department of Agriculture and from other agencies for their own information, and for the benefit of the State Federations as well, in order that production may be governed accordingly. You say it is sacrilegious and an economic waste to limit production on the farm to match a healthy demand?

That calls to my mind the desperate cry of class legislation that went up when the farmers began to declare their right to market the wealth they produced through the united labor of the whole family and the hired man, and the sound of alarm that the agricultural bloc would wreck the grand old parties.

I venture the statement that the large majority of legislation now on the statute books was passed by a bloc of some sort. It is only when the word agriculture is placed before the word bloc that the cry of alarm is sounded.

The manufacturing interests study demand and gauge their supply to match. The Standard Oil Company control, demand and supply, and we farmers who ride in "flivvers" pay for gas the price set by the oil magnate. I believe that what is fair for the goose is fair for the gander, and that we should begin studying the economics of agriculture and statistical data with a view of fitting our production to the world demand, and thus bring about a more stable market with a price level high enough to bring to the farmer some degree of independence.

There are many other activities that I might mention that the Federation will feel in duty bound to take an active part. I have tried to call your attention only to the most important and larger work.

I wish I could promise the farmers a prosperous year for 1922, but the world is too sick to recover so soon. The Federation has held bankruptcy in check the past year. Some farmers have already given up and must begin all over again; others will go the same road this year. But agriculture will not fail. It is useless to spend time brooding over what might have been. Out of this wreck, with our combined organized effort, I hope we may build a new agriculture that will make farm life what it should be—the healthiest, brightest and best place on earth to live.

Remember that we are building this new agriculture for the benefit of our boys and girls. They will be the men and women of tomorrow. Then let us go on and perfect this program outlined by the Farm Bureau Federation in 1922, bringing about a fair price level so that life on the farm will be less lonely, fuller of opportunity, freer from drudgery, more comfortable, happier, more attractive, so that a compelling desire to live on the farm will be aroused in our boys and girls.

ADDRESS OF DR. R. A. PEARSON
PRESIDENT IOWA STATE COLLEGE, AMES

The subject assigned to me is "Keeping Pace With Progressive Agriculture." This may be a hint that the farmer's agriculture must keep apace of the times. I suppose no one would object to that hint. But it may mean something far more than that—that this nation is to keep pace **with the aid** of progressive agriculture, and in that I verily do believe.

In this country today, with the great abundance of food such as we have never seen before, with a great supply of raw materials, with more gold than our country ever had before within its borders, there is trouble and distress. Business is slack. I saw a few months ago a railroad being torn up—a well-known railroad, the steel to be sold on the second-hand market; factories all over this nation are closed or running on part time. Normally in the United States at this time of the year we have about one and one-half million people out of employment, but carefully prepared estimates a little while ago showed that the number was at least four million out of employment.

The public is beginning to appreciate that prosperity in this country cannot come back as long as agriculture is in its present situation. The farmers of our nation are not buying. How can they when a bushel of corn will purchase on the market less than half of what it would purchase before the war? The purchasing power of a bushel of corn is less than 50 per cent of normal; the purchasing power of a hog not very much better. And, worse yet, our taxes have increased and they have to be paid out of a reduced income, and interest and debts have to be paid, leaving a smaller portion of that reduced income for the purchase of necessary supplies. And so the simple fact is that the great farming population of our nation, about 40 per cent, is not able to buy, and the little towns have slowed down in their business until it is almost stagnant, and the larger cities and transportation companies are feeling the situation accordingly.

But conditions, friends, are getting better. We have gone through the worst of it, and we can see a good many rays of light coming up over the horizon. A little more than a year ago the average index numbers of wholesale prices was 276, as compared with 100 before the war. A few weeks ago that had reduced to 151. It is now possible for farmers with the products that they have to sell to buy the normal quantity of some of the things that they have to buy, and in looking over a very interesting official report I found a few of the articles that can be purchased in normal quantity with agricultural products at present prices. I will tell you what they are—you may want to buy some: overalls, dung-forks, brooms, wooden buckets, kitchen chairs, coffee, sugar, and one or two other things. So that at last a few weeks ago we had come to the time when a farmer might put on a new suit of overalls, clean out his stable, sweep the barn floor, go in and sit down on a kitchen chair, and put his feet up on a wooden bucket and drink a cup of coffee sweetened with sugar, and feel natural again.

But I suppose, if I may continue the dark side of the picture just a

little longer, the thing that has made the farmers most unhappy in connection with prices that they have had to pay have been the prices that they have had to pay on those same things which they buy at retail and which previously they had themselves sold at wholesale. Some very interesting data on that subject have been collected by our Bureau of Labor in Washington. A few weeks ago it ran something like this: The farmers then were receiving 16 per cent more for their hogs than they received in 1913, but they were paying 97 per cent more for ham at retail, or 81 per cent more for pork chops; and at that same time the farmers were receiving 9 per cent less for their beef cattle (this was last August), but they were paying 57 per cent to 60 per cent more for their sirloin or round steak. Another comparison: they were getting 24 per cent less for their hides—green salt hides—than they got in 1913, but the wholesale price of shoes was 125 per cent above what it was in 1913. Wages in the packing plants were 86 per cent above, and in the shoe factories and woolen mills 100 per cent above, and the freight rates were 110 per cent above what they were in 1913, and the Bureau of Railroad Economics informs us that the railroad labor was receiving 126 per cent above what it got in 1913.

Some very interesting comparisons are being made. Dr. H. C. Taylor, chief of the Bureau of Markets in Washington, is bringing out some figures that it is worth while to study. He has shown that in normal times the wholesale price of ham in Chicago is practically twice the price of live hogs. That is to say, if live hogs were bringing 10c, ham at wholesale would bring practically 20c a pound. Retail prices of ham throughout the United States normally are about three and one-half times the price of live hogs on the Chicago market. But what is the situation today, or a few days ago? Figures which I am going to give you relate to last November. Wholesale prices of ham in Chicago, instead of being twice the price of live hogs, were three and one-fifth times the price of the live hogs; and the retail prices of ham throughout the country, instead of averaging three and one-half times the price of live hogs, averaged six and one-half times the price of live hogs. Those figures speak volumes! And they bring me to one of the most important statements that I intend to make this afternoon, namely, that one of the best remedies that can be applied to this situation which I have been describing, i. e., high prices of articles that the farmers have to buy as compared with what they sell—an unduly wide margin between what the farmers receive and consumers pay—one of the best remedies in my judgment for that situation is plain, pitiless publicity.

Taxes should come down decidedly. In the little city where I live we are paying 236 mills, and under present conditions it is a tremendously heavy burden, and I believe that steps should be taken to reduce taxes wherever that is possible. But I won't say that I think taxes should be reduced after some one person has delivered an eloquent address on the subject, or after the subject has been briefly debated in a debating society. I think that the subject should be left to the clearest thinking people in the community, and they should very carefully consider what they are getting for their taxes, and what they can best afford to get along without, and then cut off these latter taxes.

I want to remind you that there are two kinds of taxes which we are all paying—there is the voluntary tax which we levy upon ourselves through our chosen representatives, and there is the involuntary tax which is levied upon us by powers beyond our control. Not very many years ago the farmers encountered that proposition in a most practical way. They said, "Shall we continue to be taxed millions of dollars by the potato bug and wheat rust and the army worm and the codling moth, and so on, or shall we increase our voluntary taxes just a little and develop a corps of entomologists who will save those enormous losses?" And of course they did the latter. So we must keep in mind that there are two kinds of taxes, and sometimes we can save enormously on one side by adding slightly on the other side. I would not have that done, however, unless the benefit is very clearly evident.

Now a few words as to the different reasons why the prices of farm products are so low. Of course, every one knows it is because we have such a large supply on hand. Yes. The law of supply and demand is operating. The law was not passed by a legislature or by a congress, but by a higher power than either, and it is inexorable. We have a larger quantity, especially of some products, than we need. Why? For the simple reason that we have planted more acres than we needed to plant; and, again, for the simple reason that during these past two or three years we have been favored by remarkably good growing weather; and, again, we have this surplus because we have been flooding the market with some large accumulated stocks of food supplies that had been held by the government during the war period, and perhaps still larger supplies that were secretly concealed by individuals and organizations in many places. I saw something of that going on during the war, and I was reminded of how the squirrels as winter comes on perceive that they must lay up their food supply, and so they find the nuts and hide them away; and that is exactly what was done by more people in the United States than we like to admit, and those hoarded supplies have been coming out on the market.

The normal number of acres planted to the four or five or six leading cereals in the United States before the war was 211 million. During the war we run it up and up and up until it got to 240 million, nearly. It has been coming down gradually, but in the year 1921 the farmers of this nation planted 230 million acres in these cereals, an increase of 19 million over the normal number of acres. They planted three and one-half million acres more than normal in corn. Why? I suppose partly to make up for the cotton they were reducing so steadfastly in the south, and perhaps, also, to take the place of clover which had been killed out by hard winter or by drouth; but more probably, I think, that larger acreage was planted by force of habit. I want to say this, I believe that the farm land of our nation is being strained—it is a good term—it is being strained beyond reason by that kind of planting, and the thing we need most just now is to get clover and alfalfa and other leguminous crops upon the land that has been strained so hard. Our corn crop last year was about 300 million bushels more than normal—about 10 per cent—and the year before that another 300 million bushel surplus; and to illustrate the effect of the weather, let me remind you that in 1920, although we planted four million

acres less in corn than in 1921, we got 100 million bushels more of corn from that smaller acreage, which shows what good growing weather means in reference to the output of our crops.

What is the remedy for the surplus? Somebody says "Burn the corn." I have no objection to burning corn. If I had corn and could not get coal or other fuel for my corn, I would burn corn, but I do not think that enough corn has been burned in the state of Iowa to make the smallest fraction of a cent difference in the value of corn, or any noticeable difference in the amount of corn within the state.

Somebody else says, "Eat more corn." That would work if there were enough of us and if we each ate enough. Better than to eat corn would be to eat more meat, and the people of this nation will eat more meat when they get the benefit of reduced prices which the farmers of the nation have made possible, but which are so slow in arriving.

Somebody else says, "Store the corn." I believe in that thoroughly, and I am glad that our federal authorities, and largely through the incentive of such men as Mr. Howard and Mr. Cunningham and Mr. Hunt, have seen fit to make available more funds that can be loaned to farmers so that they can store corn. And I want to say that some of the banks in this state have come forward nobly in their efforts to assist in this matter, and some other banks have not come forward so nobly. And I hope these latter will see that it is not only to the advantage of the farmers of their communities, but to their own advantage to get busy and get some of that money and make it available. And already the question is being asked very seriously on all sides, "What are we going to do for just such loans when the federal funds are no longer available?" That is a big question, and I hope that the men who are working on it are going to work it out satisfactorily.

Well, somebody else says, "Export that tremendous surplus." I believe in that. Few people realize how much our exports are increased, and very few people know that our able secretary of agriculture, Mr. Wallace, has his scouts over in Europe now studying the markets for the purpose of finding information that will enable us to hold those markets in as large a measure as possible in succeeding years. But did you know that in 1921 we exported 300 million bushels of wheat—five times the normal exports? That is a pretty good record on export, and that is where a lot of that surplus wheat has been going. And we have exported one and one-half times the normal quantity of flour. Altogether in cereals and flour we exported 28 billion pounds in 1921, as compared with eight billion pounds normally. We exported in 1921 three and one-half times as much cereals and flour as we export normally. It is a great record! I do not know where we would have been if we had not gotten rid of that surplus. Dairy products make a particularly fine showing, and I am glad they do, because they represent a high degree of skill in handling the raw product. They are manufactured products, and in 1921 we exported almost 300 million pounds of finished dairy products, or more than eleven times the normal output from this country. Meat exports went up from one and one-half billion pounds to two billion pounds—an increase of nearly one-third. Altogether in 1921 we exported 31 billion pounds of food products, and to bring it right down to something which we will all understand,

this represents 1,500 carloads of food products for every day in the year, holidays excepted. Think of the wealth that that represents! It brought back to this nation about two billions of dollars. That great quantity of exports constituted about one-half of our exports, and every one knows that the strength of the nation lies largely upon its exports, and for that reason, and for the additional reason that we want to have a good outlet for our surplus farm products, it is important that we shall retain the export market as far as we can. Europe wants our food products, but at prices that are just a little better than they have to pay for food products from other sources. We have supplied a great quantity in years past on this basis, and we are supplying a great quantity now.

The worst suggestion that I have heard of in connection with caring for our surplus, or preventing a food surplus of the same kind in the future, is that we should reduce the agricultural educational activities of three agencies—the agricultural college, the county agents, and the agricultural journals. Such a plea is a plea for ignorance, and I do not believe it ever has been made by many, if any, real Iowa farmers. We did not have too much knowledge four years ago when we were sweating blood to produce the last pound and the last bushel that we could from our fields and from our animals.

Why was it that we lost our splendid foreign market on cheese? Forty years ago we were exporting 140 million pounds of cheese a year, regularly, but just before the war broke out it had fallen to about three million pounds, and now we have got it back to only ten million, and it was 140 million. Where has the market gone? We like to pat ourselves on the back and say "This is a great nation; our population has increased so much that we are eating all our cheese and we have nothing to export." But why did not the output of cheese increase with the population? For the simple reason that our good neighbors to the north studied cheese making and started their little dairy schools all over the country, and they taught every maker how to make good cheese just a little bit cheaper than we could make it, and they sent their cheese over to the European markets and took those markets away from us. And you know of many other products that could be referred to in the same manner. Why, do you know—you do know—that at different times during the past decade our country has imported for our consumption potatoes, butter, cheese, meats—even corn and eggs, from foreign countries.

The country that knows the most about the production of any kind of a product and can produce it at the lowest cost, is the one that has a great advantage over every other country. All foreign countries are watching us intently. They want not only to take the foreign markets away from us, and they are developing their educational campaigns to that end, but they want to come in here and take our home markets away from us. We say we can protect ourselves with tariffs, and we can to a certain extent, but not in a satisfactory manner. We say some other country is using cheaper labor than we have and therefore they have an advantage over us. True. Over in China they have cheap labor, and their system of transportation is something like this: A coolie takes 100 pounds on his back and travels 20 miles between sunrise and sunset. That is a day's work—100 pounds, 20 miles, or one ton one mile; and I

suppose the average man working on our great railroad systems carries not less than 100 tons while that coolie is carrying one ton. We are not afraid of that kind of ignorant competition. We have the inventors and scientists to show how we can meet it and beat it.

When we produce a harvester, a threshing machine, a tractor, a baby beef, we are reducing the cost of production and we are getting a stronger grip on the foreign market. When we allow hog cholera to take part of our livestock; when we allow wheat rust to take away 100 million dollars worth of wheat, we are then increasing our cost of production and losing our hold on the foreign market. I knew a farmer who produced hogs this past year at a cost of 44c a pound. That is the actual figure. It was so because of hog cholera. And I know another farmer who got his cost down somewhere in the vicinity of 4c a pound. He had knowledge and was using it. We should aim to retain a strong grasp upon the foreign market. It will not be easy. We will have to encourage our inventors and our scientists so that we can make one man in this country as efficient as two or three or ten against whom we must compete.

A few words about the relations between an agricultural college and this present situation. I want to say that the relations are most intimate. Our duty at the agricultural college is to help find new and better methods of improving quality, cheapening production and marketing, and improving country life, with the idea of conserving our greatest of all natural resources—soil fertility. The work of our agricultural college is conducted under three federal laws with several amendments. We began the teaching work about fifty years ago, and I will not dwell upon it. At first it was not popular. Today at Ames there are 1,500 young men studying agriculture, and almost all of them are planning on going onto Iowa farms. Don't make the mistake of thinking that in these days a college education in agriculture is taking young people away from the farms—it is helping to increase their interest in the farm, it is giving them fundamental knowledge with which to meet their problems when they return, and we are not overlooking the fact that they will be citizens as well as farmers.

In the experiment station some very interesting work is being done for farmers. Our men are loaded up with problems sent in to them day after day by Iowa farmers.

And the third line of work is the extension work, an old system which was given great impetus about eight years ago when the federal law was passed which made possible the installation of a county agent in every county in the state of Iowa. Do you know what those men did last year? They held educational meetings all over the state which were attended by more than a million and a half of persons. Do not say that the farmers don't want information. The time was, way back years ago, when some resented instruction, but now they know that they, like manufacturers, doctors and lawyers, have to get information that is reliable and up to date in order to keep ahead.

Just one instance to show the money value of the extension work. During the past year there have been not less than 6,000 demonstrations in poultry culling in this state. If each one of the 27 million hens in Iowa will increase her annual production just one egg by reason of the

fact that she was honored by being allowed to operate after the culls have passed out, that, I am told, would increase the income of the farmers of Iowa not less than \$500,000, and that sounds good when we remember that the price index on eggs is 156.

We cannot say too much in praise of those splendid men—upstanding fellows, truly honest in their work, and rendering a great and valuable service in this state.

Iowa State College, Mr. President, desires to cooperate very closely insofar as our fields come in contact with the work that you are doing. Together, the college and Farm Bureau organizations ought to do big things through better methods of production and marketing, and thus increase our profits. And let us remember that all such work helps our agriculture to be progressive agriculture as compared with other countries which would not only take our foreign markets but our home markets, as well.

It must be admitted by anyone who investigates that the American and the State Farm Bureaus are making good. They have accomplished great things for agriculture, and great credit is due to their officers for securing legislation such as President Howard has been telling us of.

You know that the state of Iowa has given many of her sons to national service. I might refer to "Tama Jim" Wilson, for sixteen years secretary of agriculture. But have you thought that at this time, in this period of anxiety in agriculture, the three outstanding men in national agricultural leadership are from Iowa—Secretary Wallace, President Howard and Senator Kenyon?

ADDRESS OF HOWARD G. CLARK

I am not going to stop to give you in review the difficulties that have arisen on account of the transportation law as it is now. I am not going to tell you how high this rate is, or that, or how difficult it is to get cars when there are 550,000 idle freight cars on the tracks today; but I want to find out if there isn't some solution of this problem so that we can reach it, and if we can get you to join with the rest of us to bring a wedge to bear in that particular place, let's all drive it together.

We started into this matter of transportation more than twenty-five years ago, and there are sitting in this audience men who saw the young men of that time, of which I was one, go through a baptism of fire in this state on the question of transportation and putting men into office who would see to it that transportation was brought about on the basis that it should occupy, and for my part I propose to go on with that fight if everybody else stands still.

What is the basis, the true basis of rate-making in this country? That gets right at the nub of it. If you get your basis right, you will get the right rates; if you get it wrong you will get the wrong rates. The rates went up during the war because it was an arbitrary proposition. You have had portrayed before you the situation here that existed during the war, if it needed portraying to you.

The Supreme Court of the United States in the Minnesota Rate Case laid down the true basis of rate-making, and right here let me say to you that this country has been propagandized for years and years and years

on the proposition that no rate could be made in this country under the constitution of the United States as at present constituted except on the basis now selected under the present transportation act, and my first duty shall be, if you please, to point out to you that that is not true.

Justice Hughes of the Supreme Court of the United States (the present secretary of state in the president's cabinet) wrote the opinion in that case, in which the Supreme Court of the United States drew clearly and fairly the basis of rate-making for this country. Was it that they should have a fixed return? or a fair return on the money invested, in any event? Not at all! Now, I am just going to read it out of the opinion of the Supreme Court so that there will be no misunderstanding about it. The Supreme Court of the United States, by Mr. Hughes, said that what the railroads were entitled to is a fair return on the value of the property kept for and used in transportation. Now, just left alone, that would sound rather as if after we determined what a fair return was, that then in any event they were entitled to that fair return—if we call it 5 per cent or 4 per cent, whatever rate is a fair return, they should have it. But Hughes said more than that. Hughes said—and I want to quote the language of the opinion:

“What the company is entitled to **ask**——”

Note that word “ask.”

“——is that it have a fair return on the value of the property used for the public convenience.”

He said that what the railroads were entitled to is a fair return on the value of the property kept for and used in transportation. But he said something else:

“On the other hand, what the public is entitled to demand is that the rates be not fixed in excess of the value of the service rendered.”

What does he say: “On the other hand, what the public”—that's you and me—“is entitled to demand”—do you notice the difference? One is **ask**, the other is **demand**,—“is that the rates be not fixed in excess of the value of the service rendered.” That is the true basis of rate-making. Fix your rate for the value of service rendered just like you fix mine. I am in the law business, another man is a doctor, and another man is in another business, and you are in the farming business—what are you entitled to? You are entitled to have only fair pay for the work you do. Now, the point I want to bring to you is this, that it is value of the service rendered. The railroad should have, for transporting a car of cattle from your town to Chicago what that service is worth, and no more.

Now, somebody says there might be a conflict there; that in one breath Hughes says they should have a fair return on the value of their property, and then he says the public should have charged to them no more than the service rendered is worth. There might be a conflict. Hughes decided it—he saw that. Now, what did he decide? Let me read it to you. This is what he said about this proposition:

“It is property employed in a public calling, subject to government regulation * * * there is attached to its use the condition that charges to the public shall not be unreasonable.”

In any event, therefore, the right of the public to have the service for what it is worth is paramount to the owners of the railroad to have a fair

return on their property. Have you got it? That is the true basis. "Oh," but somebody says, and I have had it said to me a good many times, "how do you arrive at what a fair compensation is?" "Well," I said, in answer to one question, "it is one thing that is certain, that if it cost a man 80c a bushel to raise a bushel of corn in Iowa, it is not worth 15c a bushel to haul it to Chicago. when you only get 28c for it down there." (Laughter.) It is not worth it! At the present time I believe the rate on that particular commodity has been reduced so that it is 18 $\frac{3}{4}$ c in this particular division on 100 pounds, or a little over 11c a bushel to haul it to Chicago. It doesn't take a philosopher to tell you that!

There is a basis for that; the Supreme Court decided it, and they set forth the elements to be taken into consideration. I want to make this plain to you, because I want to show you that the basis of rate-making in this country has been changed and that if you will get rid of all this and reinstall the old one, you will immediately get a reduction in rates. Somebody says, "How are you going to do that? The Interstate Commerce Commission now is under oath; we are law-abiding citizens and under their oath they have got to fix a rate that will produce a certain return." And my reply is, "We will take away that method of rate-fixing and install another one, and they will perform their duty, and down goes the rate." It is all moonshine to talk that, and I am going to point it out to you. Here are the specifications:

"In order to ascertain the value of this service, you will take into consideration the original cost of construction of these railroads."

That is one thing you will take.

"The amount expended in permanent improvements, the amount of market value of its bonds and stocks, the present as compared with the original cost of construction, the probable earning capacity of the property under the particular rates prescribed by statute, the sum required to meet operating expenses, and all others are to be given such weight as may be just and right in determining what is the fair value of the service."

That is specific enough for anybody! You cannot measure this like you would add two and two and two together and get the result. You have got to use your best judgment and find these things and all others that belong to it—many other things. You have got to take into consideration the value of the products you are going to haul. A man said to me just yesterday, "I was offered coal at the mines in Illinois for a dollar a ton, but it costs \$4.05 for freight to get it to its destination." Don't you see? It wasn't worth that to haul that coal. It may be worth more to haul other things than they are getting, but it wasn't worth that to haul that particular item.

It has been put forth with great stress that this law that we have is a permissive proposition—that it permits the commission to fix a compensation to produce 5 $\frac{1}{2}$ or 6 per cent. I want to say to you that it is not a permissive law, it is compulsory upon the commission. I want to read it to you, because somebody may say that that is not correct. This is section (c) on page 36 of the original act:

"In the exercise of its power to prescribe just and reasonable rates, the Commission shall initiate, modify, establish or adjust such rates so that

carriers as a whole * * * earn an aggregate annual net railway operating income equal, as nearly as may be * * *."

They shall do it! That is not permissive! They must do it! Don't you see? Now, the commission has done it.

What have you got? You have got a law which says that the commission must fix rates that must produce 6 per cent of the value found, or a little over one billion and eighty million dollars every year. That is over and above all charges—over and above all operating expenses; over and above sinking fund for maintenance of ways and structures, and sinking fund for maintenance of equipment and working capital. I want to ask you, my friends in the farming business, wouldn't you be most delighted if you could fix a rate so that you could have your working capital furnished you to make the other fellow turn it over? This is the gospel of the agricultural country, and I tell you its salvation is to get rid of it.

I put this up some time ago, and a gentleman said to me, "Mr. Clark, you cannot be right when you say that they took into consideration the getting of working capital through these rates." I replied, "Yes, I am right about it." "No, you cannot be right," he answered, and I said, "I admit it is unbelievable, but it is so." Now, let me read it to you:

"In properly appraising all these elements of value, we are mindful of the fact that the carriers are operating units and going concerns. This fact has been given due consideration in the light of the financial history of the transportation systems of the United States, as developed by the record and as known to us. The needs for working capital and materials and supplies on hand have been considered and allowance therefor has been made."

That is out of ex parte 74 (58 I. C. C. 220-229), in which the ruling was made, and that is the ruling of the commission. Where they need working capital, they are just reaching down into your pocketbook and taking out what they want and putting it into the pocket of the other fellow for working capital. Is that a fair basis for rate-making? I would say that a fair basis for rate-making is the value of the service rendered, and whenever you get away from the value of the service rendered, you go to a false economic basis and it is bound to lead some to ruin, because somebody gets the thing that he doesn't earn. That is the thing that we are working with.

How can we remedy it? I'll tell you how to remedy it. It doesn't take a genius to write a law. I think I can write one myself. All you have to say is that the congress of the United States shall repeal all these sections of this law and substitute in place thereof that the Interstate Commerce Commission, in fixing rates, shall initiate and determine rates, and put them into force, that will measure the value of service rendered. Now, that doesn't take very much time, does it? But let me tell you, my friends, it takes a lot of courage, because I know and you know the power that is brought to bear upon the man who wants to represent the public in these matters, and especially the agricultural interests—he has got to be made of iron.

The bonds of the railroads of this country are 11 billion dollars. Mind you, 11 billion dollars. I am talking by the books. I don't mean to say

by that that I am trying to tell you the last dollar—but in round numbers, 11 billion dollars. Ten billion dollars of that draws 4 per cent interest, and the other is refunding debt and draws 7 per cent. Some of it is refunding debt and draws 7 per cent, but it is 11 billion dollars, anyway. Now, you know and I know that those bonds were never sold for par—100 cents on the dollar—were they? The railroads never got into the treasury of their companies 100 cents on the dollar for those bonds. Some estimates compute that it is 85 cents on the dollar; but I am going to call it 100 cents on the dollar in my argument, for two reasons: First, for the reason that a billion or two doesn't cut much figure in these days, and, second, that these bonds are largely in the hands of men and women and children as trust estates all over the country—people we call innocent purchasers. The government has permitted it, and we will stand for it.

The outstanding stocks of the railroads prior to the present exploitation 1919 aggregated six billion 314 million dollars. You know and I know that they never sold for par—100 cents on the dollar. They never sold for 50 cents on the dollar. My friend, John Cownie, down here remembers when the stock of the Rock Island was multiplied four times in one year, and no money has gone into it since. The Lackawanna in 1920 doubled its capital stock from 45 million to 90 million without a dollar of money going into the treasury. The Burlington raised its capital stock from 110 million to 170 million in 1920 without putting a dollar into the treasury. That is what I call exploiting the public. What do you call it? What I want to get rid of, my friends, is another forty years of exploitation of the public by the transportation systems of this country, and isn't that the right thing to do?

We had six billion 314 million dollars worth of stocks. Let's call it six billion dollars, in round numbers. If we figure 50 cents on the dollar, we are very liberal, aren't we? No one will contend that they ever got 50 cents on the dollar for that stock. That would leave their stock at three billion dollars, wouldn't it? Now, let's see what that represents. The three billion dollars worth of stock represents the property owned by the railroads, first, that is kept for and used in transportation, and, second, that is owned by the railroads but not kept for or used in transportation. There are two kinds of property. The Interstate Commerce Commission has valued only the property that is kept for and used in transportation. In other words, you on your farm have your horses and your cattle, and all that, and you keep that for use in your farming industry. You have stocks and bonds that are not kept for or used in your business. Don't you see the distinction? All right! Now, the railroads have that property. It is estimated—and the vice president of one of the railroads who challenged the statements I made doesn't dispute the estimate—that that property is worth three billion dollars. That three billion dollars has been gathered by these railroads from rates. If you take that three billion dollars from the earnings of the stock, don't you see, their stock is retired, and you have the 11 billion dollars of bonds representing the value of those railroads.

I want to be more than fair, and for this argument only I am going to concede that the surplus that has been built up from year to year during all the years that these railroads have been running has been put back

into the roads. In other words, you know, if you invest one dollar and that earns some interest, and that is kept in, that is called surplus. Now, that surplus is two billion dollars, more or less, but I am going to call it two billion dollars; your bonds are 11 billion, and your total therefore is 13 billion dollars. That is the total of all of the railroads of the United States, and yet the Interstate Commerce Commission has fixed it at nearly 19 billion dollars, and you, the producers of this country, are paying 6 per cent on this six billion dollars that never went into those roads. That is done under this law. Is it fair? Is it right? Why, my friends, 6 per cent on that six billion dollars is 360 million dollars, and that is 2 per cent on the amount that they are asking for. You see it, don't you? It is perfectly plain.

It is being said that these roads are not earning this money. Well, now, I have before me the sworn statement of the railroads as published by the Wall Street Journal and I am taking the railroads' own statement for it. I am taking eleven months only, because that is all that is in—they have not given December yet, but I have figured that December will produce as much as November, so as to get twelve months. They earned 66 million dollars, net, in November, and I have called it 66 million for December. The total net railway operating income after deducting everything was 630 million dollars.

Some time ago I joined a little organization down in New York City. I didn't know just what it was when I joined it, but wanting information I would join pretty nearly anything that comes along. It is called the American Railway Statistics and Economic Department, and they point out this fact—let me show you what they do: There are a large number of these railroads, you know, that are leased by the operating company. That is to say, the operating company leases it from the owning company and they pay a rental for it. Now, when they get 6 per cent on the value of that road, if they do earn it, is it fair to charge up what they pay out for rental? But that is just what they do. And of railroads in the United States so operated, it amounted to 129 million 900 thousand dollars. I'll call it 130 million dollars. It is like renting your farm to me and I pay you \$5 an acre for it; then you go to the government and say, "I want 6 per cent on the value of that farm," and the government says, "All right, I'll give you 6 per cent on it," and 6 per cent on \$200 an acre is \$12 per acre, but you don't give the government credit for the \$5 that I pay you. You are getting that \$5 twice. That is what they have done to the extent of 120 million dollars, according to this report. You add that to the other amounts, and you have 790 million dollars.

Here is another simple little thing. They get 6 per cent on this value of 11 billion dollars represented by their bonds—they get it on all their property. They pay 4 per cent on their bonds and get 6 per cent, and that is 2 per cent more.

Now, if you reduce them down to their original value, what the value ought to be, they are getting way in excess of what they should. I am going to show to you what a road or two has done, and then I will quit. Are you interested in the Burlington railroad, or the Rock Island, to know what they are doing? Let me tell you what they are doing,—I have got figures right here.

The Rock Island has 180 million dollars of bonds; 55 million dollars of 7 per cent preferred stock. The bonds, as I have said, are largely proportionately 4 per cent, but to be fair I have figured on the basis of 5 per cent. The common stock is 75 million, figured at par. The net operating income of the Rock Island in twenty months was 20 million 897 thousand dollars. So this broken down Rock Island, after deducting 10 million 129 thousand dollars, leaves a net income for eleven months of 10 million 768 thousand dollars, or a little better than 14 per cent. Pretty good piece of property!

I just want at this point to tell you this story: They say to you, and I have heard it said, that today railroad stocks and bonds have gone down just the same as farm lands—aren't the holders of these securities losing just as much as you are losing? That sounds, at first flush, that the other fellow is getting it just as we are. Remember, the stocks and bonds of the railroads amount at par only to 17 billion, but they are getting 6 per cent—they are getting less than 6 per cent by the returns that are here, they are getting probably a little over 5 per cent now, after taking out working capital and all these funds I have told you about, or more than their par value. Now, I want to know, if you farmers are getting 6 per cent on more than the value of your ground, if you care very much how they quote it? If you were paying \$250 an acre for land and were getting 6 per cent on \$300 an acre valuation, you wouldn't care what they quoted it at, would you? That is the situation, and it is the result of the transportation act.

But it is more than that. Let me tell you what it does. It is the first time in the history of the United States of America where the legislative body of the country has classified property and made one property have preference over another. They have set aside these (I concede) 13 billion dollars worth of railroad property—they say 19 billion; they have set that off in a class against all the other property in the United States and say that that property shall have an income whether any other property shall have an income or not, or whether every other piece of property goes into bankruptcy or not. Do you see what it has done? That is the first time that that has been done. The Sherman anti-trust act was for the purpose of getting rid of it where it was done covertly, but this is the first time that the law has validated such a thing. Here is the cement trust, here is the steel trust—they fix a price where they get a return whether anybody else gets one or not, but they do it, and there may be some grumble that it was in violation of the law. They maintain a price because they have control of the market. Don't you see?

That, however, wouldn't be true of the railroads, but the legislature steps in and says, "As to this property, it shall have a return whether anyone else does or not." The assessed valuation of all the property in Iowa is about 19 billion dollars. Now, let us assume, for illustration, that the congress of the United States should pass a law tomorrow providing that all the property in the State of Iowa should have a net return of 6 per cent, and that everybody else must contribute to the things that we produce so that we will get our 6 per cent net. How many people do you think would stand it? Do you think the people of Minnesota or

Kansas would stand it? Not for a minute! But that is just what they have done. They have classified this property and given it a preference.

In what I am saying, I do not want to be understood as talking against transportation companies. Not by any means. Transportation is an absolute necessity. There is no substitute for it—for steam transportation. We must have it, and I say, in my judgment the best possible condition that it can be kept in is the cheapest way to keep it—keep it in the very highest and very greatest state of perfection; keep it so that it will serve the business in the community as it would to be, and we cannot afford to have it in any other way; but this agricultural country cannot stand this drain or preference of one property over another. It is not fair and it is not sound, and we have got to get on a sound basis.

SPEECH OF DR. K. W. STODDER

I have written a paper which will briefly sum up my subject, not animal diseases particularly, but swine diseases. I am therefore going to speak more particularly of swine diseases in Iowa.

Swine production on a large scale reaches its height here in Iowa. No area in the world of similar size produces so many million head as do the farms of Iowa, so our pork crop is a very large factor in the world's food supply. We have long held this supremacy and maintain it in a large measure because the grains produced here serve so well in making pork and our climate is favorable to the feeding of the animal to maximum weight and finish in record time.

This high record of pork production necessitates the crowding together of our animals and the continued use of the land for one crop to such an extent that we often experience disasters in the nature of parasitic and contagious disease invasion. The most important of these is hog cholera.

The losses in Iowa from this disease alone annually amount to millions of dollars. The figure is seldom less than \$3,000,000 and has been as high as \$35,000,000 in one season, yet this disease is preventable. Its prevention lies in the education of the hog owner.

The diseases and parasites of swine that can be demonstrated today as the cause of loss have long been recognized. Among the parasites seen here in Iowa are the hog louse and the mange mite, which live externally on the hog. They seldom kill, but they do seriously interfere with the welfare of the hogs and make gains cost much more than they should in many hog lots. These parasites are easily killed with dips in summer and oil in winter if a general clean-up of the pens goes hand in hand with the treatment of the individual, so it is strange indeed that hog raisers tolerate them as much as they do.

The worms so common in our hog lots live for the most part inside the body of the hog. The lung-worm, a fine white hair-like worm, is seen sometimes in our Iowa hogs, producing low vitality and dying pigs from the damage it does to the lung. Obviously no drug can reach this worm in its mature stage deep down in the lung to destroy it and not seriously damage the lung tissue. The control of this parasite lies in preventing its spread. Do this by remembering that a pig will have no lung worms unless he gets eggs of the parasites into his body. He can only get these

eggs by swallowing food or water contaminated with the droppings of infested hogs. Frequent rotation of the hog crop to new and clean lands will do more to check this parasite than all the drugs one can buy.

Since the common white worm of the intestine is also spread by the eggs, mature females producing new crops of hogs can be protected from it by the same procedure that controls the lung worm. One county in the corn belt has had as a major demonstration for some time the proper management of swine to prevent worm infestation and they have shown that practical methods of herd handling are easily instituted on any farm that will prevent these parasites from getting a foothold in the herd. Briefly stated, it is handling the hogs in clean places with frequent rotation to new pastures and lots.

Actual losses among our swine occur principally from contagious or infectious diseases, but a careful consideration of this phase of the subject does not demonstrate the discovery of any disease of swine in recent years that was not recognized by our best authorities of several decades ago. In spite of this, there are those who would have us believe many valuable and wonderful new findings have been made in recent years in the field of hog diseases.

Indeed, such emphasis has been put upon certain diseases of swine in some communities as to confound and confuse both veterinarian and hog owner until some have almost despaired of ever undertaking the matter at all. A little careful investigation of affairs will usually convince one that much of this discussion of mixed infection and new diseases of swine has been a sort of smoke-screen to cloak ignorance of the true condition existing or for a means of getting dollars by some unscrupulous individual.

Pages have been written regarding it and innumerable discussions presented by its sponsors, but their own conception of the disease seems poorly founded, for the more it is discussed the less they teach and specifics in the nature of vaccines while widely exploited as curative have failed miserably to give results.

Realizing that many are misled by the government license label on these goods, the American Veterinary Medical Association more than a year ago recommended that inspection and license be refused to all these vaccines of questionable merit and it is safe to say had this suggestion been adopted many Iowa farmers would still have some hogs to feed instead of a dead herd lost from cholera while some one was busy injecting these worthless vaccines into them under the impression they were treating a disease that did not exist.

The stockman bears most of this burden and should join with the ethical veterinarians to do all we possibly can to check this business which costs so much and permits cholera to spread all over the state.

The facts as we know them now regarding infectious diseases of swine indicate that there are three different conditions to deal with: First, hog cholera, a disease that is truly speaking a septicemia. That is to say, it is due to a virus that multiplies in the body of hogs and saturates all the body fluids, producing lesions to a greater or lesser extent in practically all organs, but no constant set of lesions in any organ. True, it usually produces visible changes of a hemorrhagic character of kid-

ney, intestine, bladder, and lymph glands, but there are cases of death from cholera virus with little change in the carcass so far as the naked eye can detect.

In this connection the history of the disease is of vast importance and should always be given due weight in arriving at a diagnosis of the nature of the disease to contend with. Remember that when a disease seems epidemic in a community and hogs are actually dying from it, there is nine chances in ten that it is hog cholera, for this infection is responsible for 90 per cent of the hogs we lose from contagious diseases. Proceed on the plan that it is safer to assume that you have cholera to deal with if you have sick hogs and that it is your task to prove that it is not cholera rather than the reverse attitude which so many assume. Surely it is not necessary to again emphasize that we can control hog cholera, but it is pertinent to say that it is indeed regrettable after science and experience has discovered and perfected a means of protecting swine against this age-old scourge that is really responsible for most of our hog losses the country should be still suffering the heavy losses it endures, yet so cheaply avoided.

When cholera is epidemic as it is today and has been for several months over a large area of the corn belt, the hog owner should remember that it is almost best to insure the herd in advance by vaccinating them while healthy, for results are not nearly so good in using anti-hog cholera serum as a curative as it is to make thrifty hogs immune to the infection of cholera.

II. SWINE PLAGUE

This is mentioned more than it used to be, and we no doubt have cases of swine plague to deal with in Iowa at times. This disease has been recognized for years both in Europe and America.

It produces its lesions in the lung tissues and in lymphatic glands. The onset is usually sudden and the animal seems quite prostrate, but the death loss is exceedingly low and recovery as rapid and complete as the start was sudden. Actual deaths from swine plague seldom exceed 5 per cent of the herd under good care and management. Several seasons of observation impel me to say that no one as yet has demonstrated either a cure or prevention for this disease. In spite of this fact, however, there has been a wide use of so-called "mixed infection" bacterin, swine plague vaccine, and hemorrhagic septicemia vaccine for swine in our hog yards the past few seasons. This would not be so lamentable were it not for the fact that in scores of cases sick herds have been assumed to have swine plague, flu or mixed infection and as a result received one to three treatments with these worthless bacterins when the filterable virus of hog cholera was at the root of the trouble and anti-hog-cholera serum used early would have saved most of the herd from death. Good money was wasted for worthless medication and hogs were permitted to die that could have been saved by intelligent diagnosis of the existing disease.

From September to April simple pneumonia, lung fever, congestion of the lungs, or whatever one wishes to term it, is a frequent cause of trouble among swine. In most cases it is because of overcrowded hog houses,

excessively tight houses where air becomes bad and floors damp before morning, or it may be seen under directly reverse conditions such as a floor up off of the ground that is as a result cold and thus causes the hogs to pile up to keep warm. Either this or the drafty floor due to roof cupolas and open doors that keep constant air currents playing over the herd while they try to sleep. See that your swine have plenty of sleeping space well bedded, not close and stuffy and not drafty. In properly ventilated buildings few cases of flu or pneumonia occur and a fatality is rare indeed, but cold winds over the floors where hogs are sleeping often results in trouble.

III. NECROBACILLOSIS

Chronic hog cholera, diptheretic, enteritis, necrotic enteritis and mixed infection of the intestines are names given to a disease that occurs somewhere along the digestive tube from mouth to intestinal tract.

Its cause is the accumulation of too much filth by the young pig as he grows. If it lodges in wounds of the gums, it multiplies, honeycombs the jawbone and produces enlargements of the face that stockmen often call "bull-nose" or pressing in on the nostril impairs the breathing and is named "sniffles." Many cases occur where the organisms do the greatest damage to the intestinal tube causing inflammation of a greater or lesser extent which may appear as a simple redness or a thickening of the intestinal wall. More severe cases show sloughing patches of whitish or yellow diptheretic membranes and flakes of yellow pus. Such pigs may eat at times and at other times be off feed. They may show scouring and diarrhea alternated with constipation, but because of the inability of the sore intestine to digest food and absorb it the most pronounced symptom is progressive emaciation, stunted growth, and in many cases death. Some forms of this disease have been mistaken for hog cholera and indeed the two infections may be coincident in the herd. Vaccination of pigs suffering from necrotic enteritis with the simultaneous treatment for cholera usually results in death to a large number. This has accounted for some so-called serum breaks. For this disease there is no specific. Vaccines have been widely used both as preventive and curative treatment. In our observation they are worthless and sometimes do a positive damage by increasing the death loss.

Prevention of the occurrence of this disease is possible. To accomplish it, rotate the pigs to new land often. Abolish the mud-hole, especially for the sow with her litter suckling. Provide clean water and clean feed in clean troughs or water-fountains that pigs cannot wash the feet in before eating and drinking. Mild cases may be checked if seen and treated in the early stages by the use of weak solutions of copper sulphate or acetic acid in water at intervals of a few days, but prevention is much easier and more satisfactory.

In conclusion, we have perhaps three infections among swine to contend with. Two of them can largely be prevented by making surroundings and conditions favorable for the development of thrift in the pigs. Feeds that are clean, fed in clean places, rations well-balanced with plenty of proteins, especially for the growing pig and breeding animals. Clean yards to minimize chances of infection and to check parasites

from multiplying. Light, airy houses without floor drafts and with deep straw beds that are not cold beneath. Exercise, too, in reason, must not be forgotten for the young and breeding stock especially.

The other trouble, hog cholera, is an infection once contracted is very likely to result in death of the individual, but hogs can be made immune to it safely and cheaply.

Surely, there is little reason for us to suffer the losses we do in our hog lots. A decade of experience, however, has taught us that disease-control in any instance rests first upon accurate diagnosis of the trouble. This necessitates ability based upon specialized study and experience. If the herd is ailing, therefore, the best advice one can give is to segregate the cause of disease. Quarantine the herd so as to reduce the spread, if it proves to be infectious. Notify the neighbors so that they can protect themselves from loss. Burn the dead. Clean and disinfect the pens and if it proves to be cholera use anti-hog cholera serum on the well and stronger hogs early and generously.

RESOLUTIONS ADOPTED

1. We wish to congratulate the officers and members of the Iowa Farm Bureau Federation on the successful accomplishment of most of the program of work and legislation as outlined in the resolutions adopted at the convention a year ago, and to commend them for their zeal and energy in promoting the interests of the farmers.

2. We commend the work of the legislative committee in the last session of the legislature as shown by the accomplishments, and for the work done in preparation for the proposed revision of the code, and urge them to prepare the new code revision work before the next session of the legislature.

3. That we endorse the recommendations for 1922 of Secretary Cunningham as outlined to this convention.

4. We again endorse the principles of cooperative marketing of farm products and urge our senators and representatives in congress to insist on early enactment of laws clearly defining such right.

5. That we commend the efforts of the U. S. Grain Growers in their purpose to provide a means for more orderly method of marketing of grain, and urge all producers to give the plan open minded consideration.

6. We approve the work of the Live Stock Marketing Committee of Fifteen, and the plan submitted for the marketing of live stock through cooperative agencies at cost, and urge all farmers and cooperative shipping associations to assist in making them a success.

7. Agriculture has long felt the want of a finance system peculiar to its needs. Believing that the Iowa Farm Credit Corporation will supply the necessary finance to make cooperative marketing possible, we urge our farmers to support the corporation to the end that the necessary capital may be subscribed at the earliest possible date.

7-A. We wish to pledge the power of our Federation to drive into active operation at the earliest possible moment the cooperative selling and financing agencies we have sponsored and which agriculture so sorely needs.

8. We suggest that a careful investigation be made of the cooperative

banking plans of the different states with a view of determining the practicability of such institution in an agricultural state.

9. We favor some plan by which the government of the United States may safely extend a long time credit to the governments of Europe to be used only for the purpose of purchasing farm and factory products and raw materials in this country.

10. We urge farmers to support all mutual insurance companies managed by them and for their own benefit.

11. We denounce the principle of guaranteeing a fixed return to railroads on a cost-plus basis, and demand of the congress of the United States that Section 15-A of the Esch-Cummins Act be repealed, and further demand the repeal or amendment of any or all parts of said act that in any way could be interpreted as authorizing the granting of fixed return to railroads.

12. We demand of congress the adoption of such amendments to the Interstate Commerce Act as amended by the Esch-Cummins bill as will define and curtail the powers of the Interstate Commerce Commission to the extent of protecting and preserving the powers of the State Railroad Commissions with relation to intrastate rates, services and facilities, and the local affairs of common carriers within the States, and as shall confine complaints before the Interstate Commerce Commission against such rates, regulations and practices, upon the ground of alleged discrimination, to persons and localities injuriously affected thereby.

13. A policy of real retrenchment and strictest economy should be adopted by all taxing bodies. The expenditure of public funds should be confined to absolute necessities. The letting of expensive road building contracts and all unnecessary construction of a public nature should be deferred.

14. We recommend legislation providing that State funds shall be deposited in each county and drawn upon by the State Treasurer for monthly disbursements on a pro rata basis. Surplus public funds should, so far as practical, be available to all communities.

15. We favor the repeal or amendment of the law which authorizes the issuance of county funding bonds without a vote of the people, so that the law can be applied only in extreme emergency cases.

16. We favor an amendment to our present road law which will permit a portion of the auto license reverting back to the secondary road fund in each county. We favor a farm-to-market road building plan under the authority of the Board of Supervisors.

17. We recommend that all the costs of construction, maintenance and relocation of primary roads be paid out of the primary road funds.

18. We pledge our continued support to the Executive Council in their endeavor to equalize the burdens of taxation.

19. We endorse the activities of the Agricultural Bloc in Congress in procuring the enactment of much needed legislation for the farmers' relief, and pledge them our continued support in their efforts to relieve the distressing situation surrounding agriculture.

20. That we present all the facts on corn reduction and acreage to our membership, and that we entrust each farmer to adjust his acreage in accordance with his own judgment.

21. We favor some plan of publicity whereby the works of the various units, township, county, state and national, can be made more available to the members.

22. We appreciate the helpfulness of our farm women in maintaining the morale of farm bureau membership, and in giving material aid to the activities of our local farm bureau units, and favor a more general movement for such cooperative work on a larger workable basis to the end that our active organization may never grow away from its natural setting of the Iowa Farm Home.

23. Realizing the great value of the advice and counsel of women in questions relating to community and home life, we recommend that the Executive Committee select from the farm women of Iowa a woman member of the committee who shall have all the privileges of ex-officio members.

24. We commend the American Farm Bureau Federation and our executive officers for their success in procuring the 16 per cent reduction in freight rates on grain and hay.

25. We will do everything in our power to aid and secure to the laboring man just wages and good working conditions when efficient service is rendered.

We are deeply concerned in assuring lawful and orderly protection to every citizen, and are unalterably opposed to organized strikes and lock-outs which interfere with the orderly conduct of business.

26. We endorse the adjusted Compensation Act for soldiers of the world war, and urge the people to support it as a public duty, as well as an act of justice.

27. We wish to endorse the resolutions adopted by the American Farm Bureau Federation at the recent annual convention at Atlanta, Georgia, placing particular emphasis on the following sections:

Tariff—We request of Congress the enactment of tariff legislation at once which will give to the farmers of America that measure of protection that may be necessary to equalize the difference between the costs of production of farm products in this country and in competing nations.

Tax—We heartily endorse the following principles as the foundation of our national tax policy.

1. The measure of ability to pay taxes for the support of the National Government is NET INCOME, and the bulk of the taxes should be levied and collected on that basis.

2. The tax should be progressive; that is, the greater the income the higher the rate.

3. As this is a country of all the people, all the people should have some part in supporting the Government; hence, a certain part of the revenue may justly be raised by means of consumption taxes.

We are opposed to the issuing of all tax free securities, and request that Congress submit a constitutional amendment to the several states to cure this defect in our tax system. We disapprove the repeal of the Excess Profit tax.

We are opposed to the principle of a General Sales Tax, or any similar plan such as the General Manufacturers' Tax. While recognizing that the first consideration in any tax measure is the raising of revenue, its collat-

eral effects must not be lost sight of and in so far as it is practicable the taxes should be so laid as to tend to the distribution of wealth in the hands of the many, and not to its concentration in the hands of the few.

Finance—We ask:

(a) Proper credit for farmers on twelve and twenty-four months' paper, instead of the short term credit now available.

(b) The proper authorization for commodity financing based upon warehouse receipts.

(c) Live Stock financing, based upon a proper pledge.

(d) Personal rural credits, secured by proper insurance features, and the creating of machinery that will allow cooperative societies to get money direct.

(e) That the Federal Board direct its policies so that Primary production may be given the consideration which it merits.

We ask:

The appointment of a committee to carefully prepare and present to Congress as the views of our membership a bill which will so amend existing laws as to secure to every American citizen an adequate and proper system of financing which shall be truly national in its character, safe, sound and administered under the direction of an independent and representative board of directors, representing every phase of our national life, so that Congress shall not only "coin money and regulate the value thereof," but will carry out the true spirit of the constitution by regulating the expansion and reduction of credit, not with a view of private gain, but in such a way as to protect the interest of all our citizens and secure and promote the public welfare.

Public Boards and Commissions—We urge that appointments on all boards and committees should be so made that the interests of agriculture may be protected and conserved.

Truth in Fabric—We ask Congress in the interests of public welfare to enact truth-in-fabric legislation.

Transportation—(a) We object to the carriers being granted more for the short haul than for the long haul in rail freight rates.

(b) We urge the development of the St. Lawrence Deep Waterway and other inland waterway projects which will make possible water transportation to many of our inland sections.

(c) We urge Congress to restore full rights to the State Railway Commissions as they existed prior to the war.

Pittsburgh Plus—We condemn the Pittsburgh plus principle, which adds a fictitious freight rate to the price of steel and other commodities, and we urge the correction of this abuse.

Organization Cooperation With Us—We invite all other farm organizations to cooperate with us to the fullest extent in our efforts to safeguard farm interests.

Arms Reduction—Offering a heartfelt prayer that the peoples of the earth may never again engage in wars or experience the horrors attendant thereto, we pledge to our Government and its representatives at the Arms Limitations Conference our utmost support, to the end that armed conflict between nations may be forever abolished from the face of the earth.

ELECTION OF OFFICERS

Officers were elected for the year 1922 as follows:

President—C. W. Hunt of Logan; Vice President—Charles E. Hearst of Cedar Falls; Secretary-Treasurer—E. H. Cunningham of Cresco.

Members of board of directors from even numbered districts:

Second District—John T. Hansen, Davenport.

Fourth District—L. S. Fisher, Edgewood.

Sixth District—I. N. Taylor, Oskaloosa.

Eighth District—J. H. Lynam, Corning.

Tenth District—J. H. Nordhausen, Manson.

Directors from odd numbered districts follow:

First District—Wm. Kitch, Mt. Pleasant.

Third District—A. L. Middleton, Eagle Grove.

Fifth District—David Mackie, Vinton.

Seventh District—Frank Justice, Berwick.

Ninth District—W. W. Latta, Logan.

Eleventh District—Oscar Heline, Marcus.

PART VI

State Food and Dairy Commissioner's Report for Year 1921

W. B. Barney, Commissioner

From our 1920 report we quote the following as to economic conditions.

Economic readjustment has been the chief problem of the past year. Disturbed and abnormal conditions, the heritage of every great war, mean a trying period of reconstruction for every nation involved—a period of economic warfare between conflicting interests during which many suffer and few are benefited. Following every great crisis comes a period of high prices and great business activity during which extravagance is the rule of the hour and a false feeling of prosperity, induced by the circulation of tremendous amounts of deflated money, gives the wage earner in particular, a feeling of financial security which history does not show to be justified. This in turn is followed by a true period of readjustment, when, because of the inability of the great mass of consumers to pay the prices established by inflation, prices again seek their normal level.

We are free to admit at this time that we have not passed through this period without serious difficulties and that this is especially true in its application to the farmer.

It is very well for some of our economists to travel over the country telling our people that the worst is over, but times in this and other agricultural districts are not going to be very much better so long as the farmer must accept from 20 to 25 cents for oats and from 30 to 35 cents for corn and 2 to 3 cents for green hides, all of which are less than pre-war prices, much less than the cost of production.

These prices lessen his purchasing power, so that he is no longer able to pay forty to sixty dollars for a suit of clothes and one to one dollar and a half for a neck-tie and eight to twelve dollars for a pair of shoes, with other articles of wearing apparel for himself and family in the same proportion.

Conditions will not be materially improved until the farmer can get at least somewhere near the cost of production, or a little profit. This he cannot do at this writing. Either his prod-

ucts must be materially increased in price or the things he is obliged to purchase must stand somewhere near the same percentage of reduction he has been obliged to accept on his products.

Corn sold as high as \$1.60 to \$1.80. We will admit that possibly this was an unreasonably high price, perhaps just as far from its real value as 25 to 30 cents is at this time. I recently overheard the following conversation between two gentlemen, coming out of a restaurant. One asked the other if he had had a good meal; the answer was that he should have had, as he had eaten three bushels of corn.

There is no reason why the railroads should get more for transporting a bushel of corn to the seaboard than the Iowa farmer gets for raising it. There has been too much alarm about some of our railroads going into bankruptcy and too little consideration given to the farmer who is, or will be, in bankruptcy. The railroads should do their share of bringing the country back to normal, the same as the farmer has had to do. An industry as well organized as our railroads, generally is quite able to protect itself. It is only through the help of the Iowa Farm Bureau that the farmer has received the protection that he has been able to get.

The dairy farmer has suffered less in the readjustment than any other branch of the agricultural industry. Dairy products have not depreciated in price in the same proportion that grain, cattle and hogs have. This matter will be treated at greater length in another part of this report.

TUBERCULOSIS IN OUR DAIRY HERDS

A great advance has been made in cleaning up our milk producing herds within the last two or three years. Possibly, in no other year have as many applications been filed requesting the tests as in the year just drawing to a close. The fact that the Thirty-Ninth General Assembly put a provision in the law giving preference to dairy herds had a good effect. Besides this, the new law gave cities and towns greater authority than they had ever before enjoyed to enact ordinances having for their purpose the regulation of the milk supply.

House File No. 361 reads as follows, and is of no little importance to those who are interested:

Cities and towns, including cities under special charter, in addition

to powers already granted, shall have within their corporate limits the power by ordinance (1) To provide for the inspection of milk, skimmed milk, buttermilk and cream, for domestic or potable use. (2) To establish and enforce sanitary requirements for the production, handling and distribution of milk, skimmed milk, buttermilk and cream for domestic or potable use. (3) To compel the tuberculin test by an accredited veterinarian for dairy cattle supplying milk for human consumption. (4) To provide for the pasteurization of milk, skimmed milk and cream, except that produced from a cow or herd of cows which have been placed and maintained under state or federal supervision for the eradication of tuberculosis, provided that, a cow or herd of cows shall be considered under such supervision when there is on file in the office of the commission of animal health an application for such supervision, and except that produced from a cow or herd of cows which have been tested and found free of tuberculosis by an "accredited" practicing veterinarian.

Any ordinance requiring a tuberculin test of a cow or herd of cows, whose milk is or shall be sold within the corporate limits of any city or town, as provided in this act, shall further provide that if such test has not been previously made, it may be applied at any time within six (6) months from the date of the passage of such ordinance, and the provisions thereof shall apply only after the expiration of said period.

For the purposes of this act an "accredited" practicing veterinarian is one who has successfully passed an examination of the bureau of animal industry of the United States Department of Agriculture and the commission of animal health of this state and is authorized to make tuberculin tests of accredited herds of cattle under the provisions of section six (6) of the uniform methods and rules governing accredited herd work which was approved by the bureau of animal industry of the United States Department of Agriculture, December 6, 1920.

Nothing in this act shall be construed as giving to such cities and towns authority to adopt ordinances in conflict with the state law, or to abrogate the authority now or hereafter vested in the state dairy and food commission.

During the early part of 1921, this department began receiving numerous requests for copies of an ordinance that would be suited to the needs of the different towns and cities throughout the state. It is perfectly easy to understand that it would be an extremely difficult matter to draw up an ordinance that would be suited to each and every city within the state, the variation in the size of the different places having much to do with conditions under which milk is produced.

I, finally, concluded to counsel with the different bodies, whose names you will find at the end of a "Proposed Milk Ordinance" which follows and is made a part of this report. With the help of the attorney general and after a number of conferences, with interested parties, we brought out what we termed

a proposed ordinance. We assume that it has met with considerable favor, as we have reason to believe that it has been enacted in one hundred or more places. Quite a number of places have made only slight changes, but this was expected.

PROPOSED MILK ORDINANCE

Issued May 18, 1921, by W. B. BARNEY, Dairy and Food Commissioner of the State of Iowa and approved by Animal Health Commission, State Board of Health, League of Iowa Municipalities, State Dairy Council.

Subject to such changes as may be deemed necessary to suit conditions in cities and towns where adopted.

AN ORDINANCE providing for the inspection of milk, skim-milk, buttermilk and cream; to establish and enforce sanitary requirements for the production, distribution and handling thereof, and to require pasteurization, and for tuberculin tests of herds supplying same, and prescribing penalties for violation.

Be it ordained by the Council of the City of Iowa:

Section 1. For the purpose of this ordinance, milk is the fresh, clean, lacteal secretion obtained by the complete milking of one or more healthy cows, properly fed and kept; cream is the portion of milk, rich in milk fat, which rises to the surface of milk on standing, or is separated from it by centrifugal force, is fresh and clean, and skim-milk is the portion of milk, poor in fat, from which the cream has been removed. The term "skim-milk" shall also include the fresh, clean, lacteal secretion of one or more healthy cows and containing less than three per cent of milk fat or less than eleven and one-half per cent of milk solids.

Sec. 2. It shall be unlawful to distribute or intend to distribute any milk, skim-milk or cream which is adulterated.

For the purpose of this ordinance, milk, cream and skim-milk shall be considered adulterated:

In case of milk, cream, and skim-milk:

First. If any water or any other substance has been added.

Second. If it contains any visible dirt or be contained in any container which is not clean.

Third. If it be obtained from any animal having disease, sickness, ulcer, abscess or running sore or which has been obtained from a cow within fifteen days before or five days after calving.

Fourth. If it be obtained from a cow stabled in an unhealthful place or fed upon any substance in a state of putrefication or of an unhealthful nature.

In the case of milk:

If it contains less than three per cent (3%) of milk fat or less than eleven and one-half per cent (11½%) of milk solids.

In the case of cream:

If it contains less than sixteen per cent (16%) of milk fat.

Sec. 3. It shall be unlawful to distribute or intend to distribute any misbranded milk, skim-milk or cream.

For the purpose of this ordinance, milk, cream and skim-milk shall be considered to be misbranded.

If it is labeled or branded so as to deceive or mislead the purchaser or if the package bears any statement, design or device which is false or misleading in any particular.

Sec. 4. It shall be unlawful to distribute or intend to distribute any milk, cream or skim-milk without obtaining a milk license from the Dairy and Food Commission of the State of Iowa and recording such license with the clerk. The clerk shall keep a permanent record of all such licenses and all revocations thereof.*

Sec. 5. It shall be unlawful to distribute or intend to distribute milk, skim-milk or cream unless the same is produced and distributed in strict compliance with the following rules and regulations:

(a) All milk shall be bottled but shall not be bottled on any delivery wagon or at any other place than in the milk house or milk plant, and shall be delivered in the original bottle. Nothing in this paragraph shall apply to consumers taking two gallons or more at one delivery.

(b) No dirty or unwashed bottles shall be received or be in the possession of any distributor of milk. Milk bottles, milk cans or other containers for milk shall not be used for any other purpose than containing milk and milk products. Bottles, cans or other containers shall not be left at any dwelling or other building under quarantine so long as quarantine is maintained; but shall be emptied into a receptacle provided by the person desiring milk at such quarantined place.

(c) All raw milk, skim-milk or cream shall be the product of a healthy cow or herd of cows as determined by a physical examination, and produced from a cow or herd of cows which have been placed and maintained under State or Federal supervision for the eradication of tuberculosis, provided that, a cow or herd of cows shall be considered under such supervision where there is on file in the office of the Iowa Commission of Animal Health an application for such supervision, or which have been tested and found free of tuberculosis by an "accredited" practicing veterinarian. A cow or herd of cows other than those placed under State or Federal supervision shall be tested for tuberculosis at least once a year, and where reactors are found, they must be removed and a retest conducted within six months. No cow or cows shall be allowed to associate with or added to a cow or herd of cows which have been found free of tuberculosis, as above provided, except such cow or cows as have been found free of tuberculosis. For the

*Under section IV of this ordinance no one distributing milk shall be required to take out a license except those distributing from a vehicle or store as provided in section 1444 C. C.

purpose of this ordinance, an "accredited" practicing veterinarian is one who has successfully passed an examination of the Bureau of Animal Industry of the United States Department of Agriculture and the Commission of Animal Health of this State and is authorized to make tuberculin tests of accredited herds of cattle under the provision of section six (6) of the Uniform Methods and Rules governing accredited herd work which was approved by the Bureau of Animal Industry of the United States Department of Agriculture, December 6, 1920. Such tuberculin test of a cow or herd of cows, whose milk is to be distributed, may be applied at any time within six (6) months from the date of the passage of this ordinance.

(d) No milk or cream shall be distributed or intended for distribution except that produced from a cow or herd of cows as provided by paragraph (c), except it shall first have been efficiently pasteurized. Milk shall be deemed to have been efficiently pasteurized when it has been subjected to a temperature of approximately 145 degrees Fahrenheit and not less than 142 degrees, and held at this temperature for at least thirty minutes. Every pasteurizing apparatus shall be equipped with a standard type automatic time and temperature recording device which shall be attached, adjusted and used in a manner prescribed by the dairy inspector. The recording chart shall be dated and filed at the pasteurizing plant, and be available for inspection by the dairy inspector. No milk produced by a cow or cows which have reacted to the tuberculin test shall be pasteurized and distributed or intended for distribution as fluid milk.

(e) Barns in which milk is produced shall be clean, well lighted and ventilated, and shall have floors constructed of cement or other impervious material. Manure shall not be allowed to accumulate within fifty (50) feet of the barn. Cows shall be clean and free from visible dirt at all times. Milking shall be done with clean dry hands into some form of small top pail with smooth seams or with a properly cleaned and sterilized mechanical milker.

(f) Milk shall be removed from the barns immediately after milking to a clean place and strained through new cotton or other clean efficient strainer. Milk shall be cooled immediately after milking to a temperature approximating that of well water or less and maintained at that temperature until delivered, except during the process of pasteurization.

(g) All milk houses, milk depots, milk plants and milk distributing vehicles shall be kept in a clean and sanitary condition at all times, in accordance with the standards and regulations fixed by the State law.

(h) All utensils which come in contact with milk shall be thoroughly washed and sterilized with live steam or boiling water or by any other effective and harmless method of sterilization approved by the dairy inspector.

(i) All persons engaged in the production, handling and distri-

bution of milk shall be free from all communicable diseases and from any contact with any communicable disease. Every operator of a dairy farm, milk depot, milk distributing plant or milk delivery wagon shall within twenty-four hours notify the mayor or dairy inspector of the presence of any communicable disease on his farm, among his employees or the families of his employees.

(j) Every producer of milk which is distributed or intended for distribution, shall within twenty-four hours notify the mayor or dairy inspector of the presence of any disease among the cows producing any of the milk distributed by him.

Sec. 6. It shall be unlawful to return any dirty or unwashed milk bottle, can or container to a distributor of milk, but all such shall be thoroughly rinsed with clean, cold water immediately after being emptied; or use any milk bottle, can or other container for any other purpose than containing milk or milk products. In case of quarantine, consumer shall provide a receptacle into which milk, skim-milk, butter-milk or cream shall be emptied.

Sec. 7 The council shall appoint a suitable person as dairy inspector at a salary to be fixed by the council by resolution. The dairy inspector shall familiarize himself with all State laws, ordinances and rules and regulations of all State officers and of the State and local Board of Health relating to the production and distribution of milk, skim-milk and cream, and shall see that all such laws, ordinances and rules are strictly enforced. He shall take samples of milk, skim-milk and cream distributed or intended for distribution for determining whether such complies with all State laws, ordinances, rules and regulations of all State officers, and of the State and local Board of Health. He shall inspect all dairies from which milk is distributed and all distributing stations and places where milk is kept for distribution, together with their equipment and employees. A complete record of all conditions found shall be filed with the mayor. The powers and duties of the dairy inspector may be exercised by, combined with or delegated to any other officer or employee by action of the council by resolution. In the discharge of his duties he shall co-operate with the State Dairy and Food Commissioner, the Animal Health Commission, and the State Board of Health.

Sec. 8. Any one violating any of the provisions of this ordinance shall, upon conviction, be subject to imprisonment not exceeding thirty days or to a fine not exceeding one hundred dollars. Whenever the fine and costs, imposed for the violation of this ordinance, are not paid, the person convicted may be committed to jail until such fine and costs are paid, not exceeding thirty days.

Sec. 9. All ordinances or parts of ordinances in conflict with this ordinance are hereby repealed.

Sec. 10. This ordinance shall be in force from and after its passage and publication as provided by law.

Dated at Des Moines, Iowa, May 18, 1921.

Approved by

DAIRY AND FOOD COMMISSION
STATE BOARD OF HEALTH
ANIMAL HEALTH COMMISSION
LEAGUE OF IOWA MUNICIPALITIES
STATE DAIRY COUNCIL

This department has nothing to do with the enforcement of the law having for its purpose the eradication of tubercular cattle. We work in close co-operation with Dr. Peter Malcolm, State Veterinarian, but all correspondence in this matter should be addressed to him.

PROPOSED DAIRY BUILDING AT FAIRGROUNDS

In my 1920 Report, I called the attention of the Legislature in the following language:

“An appropriation for the erection of a dairy building at the State Fair will be asked from the Legislature this winter. That Iowa’s great dairy industry should have only two small booths and a refrigerator display to represent it, at the greatest of all state fairs, is a matter of great surprise to visitors from other states. This apparent indifference to the dairy industry has been a source of considerable dissatisfaction to the various dairy organizations throughout the state. Complaints from exhibitors of dairy machinery and supplies are growing more numerous each year, until they have now reached the stage where threats to discontinue exhibiting are being heard. It is my opinion that this building should be second to none in the country. Besides ample space for the exhibiting of dairy machinery and supplies, it should be large enough to permit of the serving of dairy products and contain a working model of all phases of dairy manufacturing. By this, I mean that a creamery, market milk plant, ice cream factory, and cheese factory should be in actual operation each day of the fair. The opportunity to carry on educational work among the men of Iowa’s dairy plants by model factories of this kind is very great. Not only would a building of this kind possess great educational value but it would be a source of considerable revenue to the fair board.”

The above was written early in the summer, by the time the Legislature convened, agricultural products had taken such a drop and conditions were such that it seemed unwise to do anything or urge the erection of such a building, until materials and labor had declined in price in something like the same proportion as farm products.

I sincerely hope that as early as 1923 the readjustment period will have passed and times will be normal, so that the Fortieth General Assembly may deal generously with this most important matter.

DAIRY COMMISSIONERS

NAME	County From Which Chosen	Date of First Appointment	Years served
Henry D. Sherman	Jones	May 1, 1886....	1886—1890
Augustus C. Tupper	Mitchell	May 1, 1890....	1890—1894
William K. Boardman	Story	May 1, 1894....	1894—1898
*Levi S Gates	Delaware	May 1, 1898....	1898—1898
Byron P. Norton	Howard	Nov. 8, 1898....	1898—1902
Herbert R. Wright	Polk	May 1, 1902....	1902—1906

*Died October 11th, 1898. Byron P. Norton appointed to fill vacancy.

Note: Name of Office changed by Act of Thirty-first General Assembly to Dairy and Food Commissioner.

DAIRY AND FOOD COMMISSIONERS

Herbert R. Wright	Polk	July 1, 1906....	1906—1910
William B. Barney	Franklin	May 1, 1910....	1910—

DAIRY PRODUCTS

Estimates of the income, received by the State, from Dairy Products, during the past year place the figures at \$130,147,679.36, derived from the following sources:

Creamery Butter	\$47,896,805.29
Ice Cream	6,138,839.30
Market Milk	24,869,492.83
Cheese	81,113.89
Cottage Cheese	260,000.00
Farm Dairy Butter	18,528,750.00
Condensed Milk	372,678.05
Skim-milk & Buttermilk	12,000,000.00
Fertilizer	20,000,000.00

With the exception of creamery butter, you will find that the foregoing figures show a decided decrease in values, as compared with the figures given in my 1920 report. I account for this by the declining of prices on all of our markets during the past year, as well as by a decrease in the amount of some of the products manufactured.

I, naturally, expected that prices would decline this year. However, I have been more than gratified during the entire year with the condition of our Dairy Markets, especially, when compared with the market values of all other farm products and we are confident that the milch cow has saved thousands of Iowa farmers from financial ruin.

Corn, oats and other grains, as well as all forage crops produced on our Iowa farms have been selling below the cost of production. Considering the favorable market value of Dairy Products, I decided that it was an opportune time to impress upon the Iowa farmer the necessity of marketing considerable of his cheap grain, through the butterfat route, by feeding it to milch cows and with this in mind and with the help of Wallaces' Farmer and some suggestions from the Dairy Husbandry Department of the Iowa State College, we issued the following poster.

DAIRY FARMERS

ATTENTION

Market your corn and oats in the form of butterfat.

No doubt you have heard considerable protesting against the low prices which producers are receiving for corn and oats. The figures mentioned below give a comparison of the return for corn and oats when fed to milk cows and should be of interest to all having to do with the dairy industry.

Milk Cows Give the Following Values to Grains:

Butterfat Price	Corn Value	Oats Value
36	54	37
38	57.6	40
40	61	42
42	65	44.6
44	68.3	47
46	72	49.5
48	75.4	52
50	79	54.5

This value of corn and oats takes into consideration the added labor of butterfat production and investment in cattle.

SUGGESTIONS FOR FEEDING.

The Dairy Husbandry Department of the Iowa State College, suggests the following rations to feed milk cows for the promotion of butterfat production and maximum use of Iowa's surplus corn crop:

- 400 pounds cracked corn or corn and cob meal;
- 200 pounds Ground Oats;
- 100 pounds Oil Meal or Cotton Seed Meal.

One hundred pounds of ground soy beans is superior to oil meal or cotton seed meal and is being grown in some localities of Iowa. A ration not quite as satisfactory as the above may be made up of equal parts by weight of corn and cob meal, or cracked corn and ground oats. With this clover hay and corn ensilage should be fed. Generous feeding of milk cows with thoughtful management of the herd will do more to increase production of butterfat than anything and develop a higher cash market for Iowa's corn and oat crop.

STATE DAIRY AND FOOD COMMISSION.

W. B. BARNEY, Commissioner.

We are inclined to believe that the suggestions offered on this poster were more or less popular at this time, as we have issued over 60,000 copies, all of which have been distributed over the state and they were mailed out only upon request.

There has been very little change in the consumption of farm butter. However, I still believe, as I have stated in previous reports, that "While the use of good dairy butter upon the farm, or in towns adjacent to the place of its manufacture is not to be condemned, I feel that in general Iowa dairymen would profit more and more by sending a good grade of cream to the creamery, instead of converting it into butter on the farm. This applies, particularly, to dairy butter, which is traded in at the country store for merchandise, a practice which is still in vogue in many parts of this state. In many instances, these country stores receive such a large amount of dairy butter, of widely differing grades, that the only means which they have of disposing of it, is to send it to the renovating plant, where it is manufactured into low-grade butter. It is almost impossible to estimate the loss sustained from this practice but it is safe to say that it is very large."

This not only applies to the farmer, or producer, but to the country merchant as well and I am inclined to place the blame for considerable of this loss upon the merchant, for the reason, that very few, if any, merchants are making a differential in the price per pound paid for the different grades of dairy butter. We understand that a great many Iowa merchants are more or less worried over this proposition, at this time, especially in southern Iowa and I would recommend as a solution of this problem, that all Iowa farm dairy butter be paid for strictly according to grade or quality.

Reports from creameries show that over 5,000,000 pounds more of creamery butter was sold within the state than during

the previous year. We are inclined to believe that this is due to the decline in price, which has enabled a great many people of moderate means to use creamery butter, instead of oleomargarine, which was the case when butter was beyond their reach in price.

From a recent report, issued by the Internal Revenue Department, we are informed that there has been a $47\frac{1}{2}\%$ decrease in the consumption of oleomargarine, during the first nine months of the past year. We also learn from reports from the Federal Dairy Division that there has been a 19% increase in the production of dairy products, these reports are interesting, when compared with the reports from cold storage warehouses, which show that there is less creamery butter in cold storage than on the same date one year ago. This indicates that the consumer prefers butter to oleomargarine, when there is not too great a difference in the price.

This, also, confirms the fact that the American people prefer butter to any of its substitutes.

In view of the fact that we have had such an enormous increase in production, during the past year and with every indication pointing towards still greater production, during the coming year, I would recommend that the dairy interests of the state do all they can to stimulate the consumption of dairy products, by appropriating liberal amounts for advertising and educational work, especially such work as is being carried on by organizations, such as the National Dairy Council, etc.

A great amount of interest is now being taken by our Iowa Creameries in our State Butter Mark or as it is better known and more commonly called our State Brand. We have had a few more creameries each year who have applied for and qualified for the use of this Brand, however, the interest has not been as keen as we would like to have it. Market conditions at the time the Brand was originated were not as discriminate, as far as quality was concerned, as they are today and there was not much of an inducement for creameries to go to the expense and trouble of qualifying for the use of the Brand. However, the plants who have stayed by the Brand are now winning out, as market conditions have changed considerably.

I believe there is a ready market, within the state, which would be willing to pay a premium for all the State Brand Butter which will be manufactured in Iowa for some time to

come, providing, the State Brand creameries get together and arrange a plan for putting their product on our home markets.

CREAMERY BUTTER

The year 1921 shows a remarkable increase in Iowa's butter production. Iowa Creameries have manufactured 98,740,419 pounds of butter, which is 12,520,807 pounds more than was manufactured in 1920 and 1,111,631 pounds more than was manufactured in 1917, which was formerly our largest year of production, since I have been Commissioner.

Despite the fact that the market price has declined considerable during the year, the total value of creamery butter manufactured has increased, due, of course, to the increase in production. This year's output sold for \$47,896,805.29. This is \$32,351.87 more than the total value last year, making this the **Banner Year**, as far as values are concerned.

That there has been a marked improvement in the quality is not denied by any one, this condition has been brought about by several agencies, mainly, by market conditions, greater interest in grading and attention to details by our operators, increased interest in dairying on the part of all producers, which naturally, means greater interest in quality and by the increased efforts of this Department and the Dairy Manufacturing Division of the Extension Department of the Iowa State College, along with the help of all our State Dairy Organizations.

To back us up with our contention that this is also our **Banner Year**, in regard to the improvement in quality we wish to refer you to the Banner, which was won on butter exhibited at the National Dairy Show, by our Iowa creameries. (A cut of which appears elsewhere in this report, along with the men who made the butter).

A banner of this kind is offered each year by the National Creamery Buttermakers' Association. The state of Minnesota has won every banner, previously offered, I am very much gratified to know that Iowa can once more proclaim herself a quality butter producing state.

I noticed considerable more interest was being taken in the improvement of quality early in the year, especially was this true in regard to the butter scoring contests, which were held each month and after the exhibit at the Iowa State Fair and the

Dairy Cattle Congress, at Waterloo, we found such a marked improvement in the quality that we predicted Iowa had a very good chance to win the Banner at the National Show and later results proved that our prediction was correct.

I am satisfied that most of the credit for improvement in quality must be given to our creamery operators. We are each year putting more and more of our creameries in charge of wide-awake, trained and up-to-date men, more of this sort of men are becoming interested in creamery work, for the reason, that our creamery managers, directors, etc., have begun to realize that they must pay salaries that will attract first class men to this work.

To become a first class operator, it is necessary for a man to serve several years' apprenticeship and receive some Dairy School training. Helpers, or second men, as we sometimes call them, generally receive small salaries. Dairy School training costs considerable money and good wide-awake men will not spend the time or money necessary to make them first class operators, unless they receive a salary commensurate with the training required to fit them for this class of work.

CONDENSED MILK

The manufacture of condensed milk has gradually decreased in Iowa since 1919. It seems that this product continues to be a drug on the market, which condition can, probably, be accounted for by the fact that during the war there was an unlimited demand for this product. A very great amount of the output of this country was exported. During this time, (due to the enormous demand for this product), a great many new condenseries were erected, especially in some of the dairy districts of Wisconsin and some of the eastern states. Foreign demands, naturally, fell off with the close of the war, with the result that the markets of this country were flooded with condensed milk. A great many eastern plants have closed down during the past year or have installed the necessary equipment to convert their product into butter.

We are in hopes that this condition will clarify itself during the coming year and that the industry will once more get back to a normal basis.

As was reported last year, Iowa has but two condenseries, which are still operating although they have converted some of their product into butter. Their total output decreased in value during the year from \$733,521.34 to \$372,678.05.

CHEESE

The manufacture of cheese in Iowa shows a decrease of 458,640 pounds less than last year. Reports received by this department, also, show that there were but ten factories operating, as compared with seventeen one year ago and but one of these ten is in operation, at this time, the others having been closed, temporarily, due to the unsatisfactory condition of our cheese markets and the fact that they were unable to pay the producer satisfactory prices for milk.

Our ten factories, which only operated part time during the year, manufactured a total of 331,483 pounds, which was valued at \$81,113.89. This is far below the amount consumed by the state and we are sorry that conditions are such that Iowa must import a large amount of this product to supply home demands.

As I have stated before, cheese should occupy a prominent place in our dietary, especially, on account of its high nutritive value and palatability.

Iowa manufactures and consumes over 2,000,000 pounds of cottage cheese, annually, and this valuable food is becoming more popular with the housewife each year.

ICE CREAM

The ice cream industry of the state has survived another strenuous year, price reductions, high manufacturing costs and express rates, war taxes, shortage of ice and poor collections have been the cause of constant uncertainty and worry to the manufacturer and retailer, as well.

In spite of stringent financial conditions, which resulted in a great many people being out of employment, the consumption of ice cream has increased 144,000 gallons in this state during the past year.

Our factories manufactured, approximately, 5,580,763 gallons, which sold for a total of \$6,138,839.30. Although we have had a slight increase in the amount manufactured the total valuation of this product decreased \$657,103.70, due to a decline in the wholesale price.

The war tax placed upon the sale of ice cream is, undoubtedly, partly responsible for the failure of the public to consume a larger amount of ice cream. This is brought about through the tendency, on the part of certain retailers, to advance the price to the next even nickel, when a war tax of one or two cents is placed upon each dish served. That is, a dish of ice cream retailing for fifteen cents incurs a war tax of two cents. Many dealers simply advance the total price to twenty cents and absorb the war tax. Needless to say, this extra three cents are not shared with the manufacturer, and from his standpoint is harmful, since there is no gainsaying the fact that this levying of an additional five cents does keep many people from making a purchase.

I am satisfied that the tax on ice cream should be eliminated as the citizens of Iowa, at least, do not class ice cream as a luxury but consider it one of our most valuable food products.

The wholesale price was reduced by the manufacturer to some extent this year, however, I believe that most manufacturers would welcome still greater reductions, providing, they were assured that the retailers would make corresponding reductions and the public would get the benefits to be derived from such a move.

MARKET MILK

This year has seen a large increase in the production of milk, due in large part to the financial condition and the drop in price of all farm products.

The producer has found out that the dairy cow affords him a steady supply of cash which he has needed so badly. The result has been, in many cases, a production in excess of the demand, which has kept prices down to the producer and has been reflected in lower prices to the consumer. These conditions have, also, kept the price of all manufactured dairy products, as cheese, butter and condensed milk, much lower than they have been for several years.

It is apparent that these conditions will continue unless there is a greater consumption in dairy products. Educational campaigns have been made in many cities on the value of milk as a food and in every case an increased consumption has been noted. It is unfortunate that in times of low income the housewife will in most cases reduce the amount of milk for the family, in preference to any other food. She must be taught that she can better conserve the health of her family by reducing the amount of any other article of food.

One of the purposes of the National Dairy Council is to promote the consumption of market milk by teaching the public the value of milk, as a food and its necessity in the diet. Large amounts of literature and illustrated posters have been distributed to accomplish this and the results have been gratifying. Marked results have been obtained among school children, in many cities, by inducing them to drink milk each day at school. An especial effort has been made in these schools to get under-nourished children to drink milk and the records show that this class of children have made a marked improvement in their mental as well as physical condition, after taking the milk for several months.

I believe that the quality of the market milk in Iowa compares very favorably with that of any other state. A law requiring dairy cattle to be tested for tuberculosis, passed by the Thirty-Ninth General Assembly and appearing elsewhere in this report, will materially improve the quality of our milk supply. Last fall this department conducted a market milk contest, in which eleven cities entered. The scoring was made in accordance with the rules followed by the United States Department

of Agriculture, the scoring being made upon the results of chemical analysis, cleanliness and bacteria. By means of these contests we are able to locate any milk unfit for food and the cause for this condition.

With this information the inspector can give the necessary instructions for making the milk safe and in compliance with the law.

In the scoring of milk, the perfect score is as follows :

- 35 points for bacteria.
- 25 points for flavor and odor.
- 10 points for cleanliness.
- 10 points for fat.
- 10 points for solids, not fat.
- 5 points for acidity.
- 5 points for the container.

The scores in the contest are as follows :

Ottumwa	61.80
Davenport	64.08
Des Moines	76.20
Burlington	69.35
Marshalltown	63.26
Mason City	62.58
Dubuque	77.36
Sioux City	80.57
Fort Dodge	61.64
Cedar Rapids	88.93
Waterloo	68.83

While only a few of the scores are close to a perfect score of 100, it does not indicate a dangerous condition as the low scores were produced by high bacterial counts due to not cooling the milk properly, which allows the harmless lactic acid bacteria to develop in large numbers. The inspection of the market milk supply is of prime importance and the law provides that the Commissioner may appoint a milk inspector in cities of 10,000 or more population. But there is not sufficient funds to pay them for full time, thus they are placed upon a per diem basis, they receiving pay for from five to fifteen days each month, according to the population.

Much good can be accomplished by the city and state appointing the same man and employ him full time and the combined salaries insures the employment of more efficient inspectors. The state authority gives the added advantage to the city of dairy farm inspection outside the city limits which a

city inspector would not have. Dairy farm inspection is a very important part of market milk supervision, as it reaches the source of the supply where lax methods and poor equipment are often the cause of impure milk.

CREAM GRADING

Ever since the advent of the cream separator, the grading of cream has been advocated, in some form or other, and as the whole milk creameries and old fashioned skimming stations gradually began to decrease, it was generally believed by those in touch with the situation that eventually some uniform system would have to be established, governing the handling and purchasing of cream, used in the manufacture of butter.

From the standpoint of improving the quality of cream received by the creamery the use of an efficient system of cream grading is all important. Until recent years the cream grading has received very little attention by our creameries. Little, if any, grading was done and the same price was paid for good and poor cream. This has resulted in a general depreciation of the quality of the cream furnished by the farmer, there was no material inducement to the farmer to make a special effort in the care of the cream on the farm. Unless his personal pride and decency prompted him to produce a clean, sanitary and properly cooled cream, he was all too ready to follow the line of the least resistance and pay no attention to the quality of the cream he furnished. In fact, the failure of the creamery to grade cream put a premium on shiftless and careless handling of cream on the farm and on the receipt of poor cream in the factory.

In consequence of this disregard for quality of raw material, much of the butter annually reaching the market was of unsatisfactory quality, the keeping property of much of this butter was inferior, causing it to come out of storage in a deteriorated condition, large quantities of butter had to be sold under market quotations, inviting keen competition by foreign butter and butter substitutes and rendering the establishment of a reputation for American butter in foreign markets exceedingly slow and difficult.

Within the last five to ten years, the pure food wave that has swept the country awakening the public to a keener appreciation of the value of wholesome food products of good quality,

the realization on the part of the creamerymen of the necessity of supplying the market with better butter in order to dispose of it at a satisfactory margin, and the efforts of the dairy educational forces to introduce practical methods for the systematic grading of cream, have been mighty factors in focusing the attention of the creamerymen on improving their cream supply by cream grading and quality-paying.

The earliest efforts at cream grading were largely abortive. In isolated cases some concerns had the courage and determination to grade and pay on the basis of grade only. But the great majority of creameries, while acknowledging the fundamental correctness of cream grading, lacked the courage to undertake it. Their intentions foundered on the rock of competition in the cream supply territory. They lacked confidence in each other to stand by mutual agreements to start grading and quality-paying. They were fearful of losing patrons and of working into the hands of their competitors. Gentlemen's agreements, drafted in sectional and national conferences of creamerymen to grade cream, proved futile. Attempts to place legislative measures on the statute books, requiring the grading of cream, proved unconstitutional, and Government inspection of the creameries for the purpose of compelling nationwide cream grading did not materialize because of the enormity of the proposed undertaking.

While most of these proposed and apparently ideal plans failed to materialize and were automatically abandoned, one after another, the constant agitation of the subject did not fail to have its good effect. While it became clear to all practical creamerymen that the industry was not ripe as yet for an organized state- or nation-wide plan of cream grading by mutual agreement between creameries, farsighted creamerymen realized that this complex and difficult matter was a problem to be solved independently by each individual creamery and that it was to the unquestioned advantage of each individual concern to introduce cream grading in their own plants.

Today most of the really progressive creameries, large and small, are grading their cream and many of these creameries pay the farmer on the basis of quality. Those who have taken this important step are already convinced of its permanent advantages and it is only a question of time when all creameries, for their own protection, will adopt a rational system of cream

grading and paying on the basis of quality. They are bound to come to the inevitable conclusion that, in order to secure satisfactory returns from the market, they must furnish the market with good butter, that they cannot hold the patronage of the cream producer to furnish good cream unless they pay him a differential on the basis of quality, and that the paying of top prices for butterfat of poor quality must ultimately spell financial loss and ruin.

Keeping in mind the obstacles which have confronted the creamery that has been a pioneer and started a grading system and at the same time considering market conditions during the last two or three years, these conditions having, generally, been annoying to the manufacturer of lower grade butter, I decided that something should be done to stimulate more of an interest in cream grading and that some uniform grading system should be established in Iowa.

A meeting was held at this office early last winter, at which representatives of the co-operative and centralized creameries, Dairy Department of the State Agricultural College, State Dairy Council, Creamery Managers' and Secretaries' Association, State Buttermakers' Association and members of this Department were present. At this meeting the various problems relating to the grading of cream were discussed at length. The Department, after getting the judgment of the various members of the dairy industry represented at the meeting, established the following grades of cream and rules and regulations governing its purchase.

YEASTY—Cream having a flavor resembling yeast and which has a tendency to foam when cream has been held under too high temperature.

CHEESY—Cream which smells and tastes like cheese, caused by holding sour cream for too long a period at too high temperature, under conditions not sufficiently clean.

WEEDY—Cream which has the flavor of onions, rag-weed, rape, cabbage, etc.

BITTER—Bitter cream has a taste closely resembling quinine. It is cream which has been held too long at a low temperature.

The above regulations shall be observed in the purchase of all cream by creamerymen and station operators, and by producers of cream.

W. B. BARNEY,
Dairy and Food Commissioner.

Approved July 18, 1921, by Executive Council of Iowa.

TACK THIS POSTER IN A CONSPICUOUS PLACE

Clean utensils and cooling tanks will help you to have cream which will grade Extras and Firsts.

REGULATIONS FOR CREAM GRADING

Under authority granted by Sec. 4999-a-18, the following grades of cream are hereby established.

EXTRAS

Extras shall consist of sweet cream, clean in flavor and not to contain more than .2 of 1% of acidity.

FIRSTS

Firsts shall consist of cream that is clean, smooth, free of all undesirable odors, clean to the taste and only slightly sour.

SECONDS

Seconds shall consist of cream that is too sour to grade as Firsts; may contain undesirable flavors or odors to a slight degree, also that which is too old to pass as Firsts. All sour cream containing less than 25% butterfat shall be graded as Seconds.

ILLEGAL CREAM

Under the Law, cream is a food and any cream produced from an unhealthy cow or consisting in whole or in part of a filthy, rancid, decomposed or putrid substance shall not be offered for sale. Neither shall such cream be purchased.

The following undesirable flavors and odors will not be allowed except in a slight degree in cream grading Seconds, and will be turned back as illegal.

STALE OR MUSTY—Stale flavors are caused by holding cream too long or holding cream in stale cans, or using stale water in washing or rinsing cans. Musty cream is the result of holding cream in a cave, cellar, or room having stale or musty surroundings.

VERY SOUR—Cream having a very high acidity. It is the result of holding cream too long and at too high a temperature.

OILY—Oily flavor is caused by having cream near coal oil, gasoline or other similar product; also by carelessness in handling separator oil, or using cans in which any of these products have been handled.

METALLIC—Metallic flavor is that flavor which is frequently caused by cream coming in contact with rusty or poorly tinned separators, cream cans or other utensils.

EXTRAS

Extras shall consist of sweet cream, clean in flavor and not to contain more than .2 of 1% of acidity.

All containers for cream grading Extras shall be properly designated.

A space of at least 2 feet shall separate Extras from any other grade of cream.

This placard shall be tacked in a conspicuous place on the wall, immediately above the containers of cream grading Extras.

W. B. BARNEY,

Approved April 1, 1921.

State Dairy and Food Commissioner.

This card in white.

FIRSTS

This placard shall be tacked in a conspicuous place on the wall immediately above the receiving container of cream grading Firsts.

Firsts shall consist of cream that is clean, smooth, free from all undesirable odors, clean to the taste and only slightly sour.

All containers for cream grading Firsts shall be properly designated.

A space of at least 2 feet shall separate Firsts from any other grade of cream.

W. B. BARNEY,

Approved April 1, 1921.

State Dairy and Food Commissioner.

This card in blue.

SECONDS

This placard shall be tacked in a conspicuous place on the wall, immediately above the receiving container of cream grading Seconds.

Seconds shall consist of cream that is too sour to grade as Firsts, may contain undesirable flavors or odors to a slight degree, also that which is too old to pass as Firsts. All sour cream containing less than 25% butterfat shall be graded as Seconds.

All containers for cream grading Seconds shall be properly designated.

A space of at least 2 feet shall separate Seconds from any other grade of cream.

W. B. BARNEY,

Approved April 1, 1921.

State Dairy and Food Commissioner.

This card in red.

These grades are printed in card form in different colors and are posted up in the cream station at different places and the various grades placed near the card which designates the grade to which it belongs.

PURE FOOD LEGISLATION AND ITS BENEFITS

The passing of the National Food and Drug Act, in 1906, was the most beneficial legislation ever passed by Congress in the interest of the consumers of foods and drugs and honest manufacturers of these products.

Practically all of the states now have similar laws and their proper and fearless enforcement insures to the people food, which is produced and handled in a sanitary and healthful man-

ner, free from adulteration and labeled to show their true composition.

The laws of Iowa give the consumer this full protection and manufacturers vie with one another in putting out high class foods, produced under sanitary conditions and from fresh raw materials. By using these fresh raw materials and properly sterilizing the finished products, the use of preservatives has been found unnecessary, contrary to the former belief that it was impossible to keep food products for any length of time without using liberal quantities of chemical preservatives. Eternal vigilance, however, will always be the price the states and nation must pay for clean, wholesome and honestly labeled foods and drugs. As it is necessary to maintain a police force it is likewise necessary to maintain food and drug officials, to protect the consumers of these products.

Much work has been done in building up a system of co-operation between the Federal Food Authorities and the states, and much good is being accomplished in running down adulterated and misbranded products and prosecuting those responsible for placing them on the market. Under the present system, this department is notified, by the Federal Authorities, when illegal foods and drugs have been shipped into Iowa, our inspectors are then instructed to collect samples and these are sent to the Government laboratory and if found to be illegal the shipments are siezed under Government orders and the manufacturer is cited to appear, with the result that he is fined and his goods destroyed or returned to him to be relabeled to comply with the law, he giving a bond that this will be done properly. Under this system it makes it difficult for the unscrupulous manufacturer to operate for any great length of time.

While there is considerable difference in the requirement of the food laws of the various states, there is a general belief that they should be as nearly uniform, as possible, so as to avoid the extra expense of having different lots of labels and foods for the different states. The added expense of such necessity under the present condition must be borne by the consumer of these products. Many of the states have modeled their food and drug laws after the Federal Act and no doubt in the not distant future, there will be close conformity between all laws which regulate the manufacture and sale of these products, which will be much to the advantage of all concerned.

All danger does not lie in food that is knowingly adulterated by the manufacturer. Outbreaks of food poisoning are a serious menace to the public and require prompt action by food authorities.

In the last few years there have been several outbreaks, in widely separated localities, of botulism due to the presence of the bacillus botulinus in certain classes of foods. It has been found by investigators that this bacillus is widely distributed in nature and is a potential source of danger.

This bacillus itself is not poisonous but is a spore former and the poison is formed when it develops, thus the bacillus may be present in foods but unless conditions have been favorable for its growth, there is no danger in consuming the food. Boiling temperature will destroy the toxin produced by this bacillus but it will not destroy the bacillus itself, so that if the food after being heated to this temperature is kept under proper conditions, the toxin will again be produced. It is important that proper factory methods be used in preparing foods as a safeguard against this danger.

This bacillus is as liable to be found in home canned foods as those canned in factories. During the outbreak of this poisoning, in ripe olives, this department was furnished a list of shipments which had been sent into Iowa, by the Federal Authorities and we, at once, instructed the inspectors to order from sale all these shipments, which still remained on the grocers' shelves. By this quick action, possibly an outbreak of this poisoning was prevented in Iowa. This demonstrates the value of co-operation between state and Federal Food Authorities.

At times there have been attempts, in Congress, to nullify the powers of the states over its food supplies, which are shipped from other states, thus having entered inter-state commerce. The Calder Bill, now in Congress, exempts foods which have been shipped into a state, from the requirements of the state laws. This would take from the states their constitutional right to protect the health of their citizens. While a law of this kind is of doubtful constitutionality, it should not be permitted to be placed upon the statutes and every effort should be made to prevent its passage.

IMITATION EVAPORATED MILK

The Thirty-eighth General Assembly, at the solicitation of this Department, passed a law requiring all evaporated milk, made from skim-milk and cocoanut oil, to be branded "Imitation Evaporated Milk."

Owing to evils which were practiced in selling this product, it was deemed advisable to require some sort of labeling which would enable the consumer to know the nature of the product he was buying.

It was found that some grocers would sell this product for evaporated milk and were content to let the consumer think that he was getting an evaporated whole milk. By branding this product as required by law, in large prominent type, on the main label we believe the consumer is afforded a means of protection and the producer can be protected against this product by placing a tax upon each package sold.

CANNED FOODS

(E. L. Redfern—State Chemist.)

The ever increasing amount of canned foods consumed makes their inspection of prime importance. While the canners are supposed to use every precaution to produce a salable product, as a matter of self preservation, faulty packages often get by and are to be found on the market. Cans often go bad after they have left the cannery due to faulty packing or improper handling or storing by the grocer, such as in damp cellars.

The inspector must judge by the exterior appearance whether samples should be taken and submitted to the laboratory. If the ends of the can are cupped or concave they should be given a sharp rap on the edge of a table or something solid to see if the lower end comes up even or remains cupped. If the end does not remain concave there is not sufficient vacuum in the can, provided the temperature of the weather is not too high, in which case the can would likely be a "springer" i.e., the ends could be pressed back and forth. From this it will be seen that a can may be normal one week and a springer the next, due to the change of the weather.

The above conditions, when found, are no cause for alarm as such goods are perfectly good and salable.

The question of swelled goods is a more serious problem, and where such goods are found, they should be condemned and if possible, thrown on the dump in the inspector's presence. The slightest bulge in the end of a can is just cause for condemnation, as this is due to pressure from the inside from gases produced by fermentation or bacterial action, especially is this true in the case of such foods as peas, corn, etc. However, in acid fruits, swelling is often caused by the action of the fruit acids on the tin which liberates hydrogen gas in sufficient amounts to bulge the ends of the can, except where the can is leaky in which case the swelling is due to decomposition. The action of the fruit acids on the tin is also influenced by the temperature, being hastened when the goods are stored in a hot climate or under a metal roof during the hot summer months in this climate and retarded when held in a cool store room or during the winter months. It can be easily seen then how under certain conditions cans may be normal and under others "springers". Where there is doubt in the inspectors' mind regarding canned goods, an inspection of the contents of the can will solve the matter.

The number of vent holes in the top of a can is one which might be misleading. More than one vent hole is no proof that the goods have been reprocessed as some canners still seal the can before cooking and when the cans are removed from the kettles they are punctured to allow the air to escape, resoldered and put into the kettles and cooked the second time. Even a third vent hole is sometimes made when the second hole has failed to give the proper exhaust, due to particles of the contents stopping the hole. With the sanitary can whose use is becoming so common it is possible to find a vent hole although this is unusual and occurs when by mistake the brine or liquid has been left out and is placed in the sealed cans by means of a vent hole. Also some salmon and crab canners still prefer to vent the sanitary cans and give them a short cooking in the retorts before sealing. Sometimes upon opening a can of beans or peas there is a discoloration on the sides of the can and even on top of the food. This color which is usually black or nearly so is due to a very thin film of metallic sulphide in colloidal form. There is not enough of these materials present, however, to be injurious while they present a suspicious appearance and usually result in com-

plaints by the purchaser. An example of this condition came to the laboratory last fall when a lady brought in a glass quart can of corn. She had canned this herself. There was a black coloration on the surface of the contents and around the neck of the jar. An examination showed that she had used one of the new brass looking covers now sold for Mason jars which has no glass lining. The brass like appearance on the cover proved be due to lacquer and the cover was made of iron. The lacquer had broken away and exposed the iron to the contents with the result that the surface had become black and uninviting in appearance. In corn canning factories this same discoloration has sometimes appeared and is supposed to be due to the corn coming in contact with metals in the cooking kettles or pipes through which the corn is passed. The National Cannery Laboratory, under the direction of Dr. Bigelow, has put much study upon this problem and I understand has practically eliminated this trouble. The Cannery Association in recent years have done much to standardize the quality of their products and the sanitary conditions under which they are produced.

Their inspection service in the principal canning states gives them close control over their products. Reports during the last two years show that much salmon has been canned which was in various stages of decomposition with the result that the Bureau of Chemistry has condemned large quantities of salmon in various parts of the country. The cause of this practice seems to be that salmon were delivered to the cannery faster than they could be handled with the result that the fish would start to decompose before they were canned. The salmon canners have instituted an inspection service, and no doubt much of this practice will be eliminated, at least among members of the salmon canners' association.

The good work of the Bureau of Chemistry, in locating interstate shipments of canned foods, is a great help to the state authorities thereby eliminating illegal goods from the state markets and allowing the inspectors to devote more of their time to intra-state goods. The state officers' principal work on canned goods is to locate and destroy swollen goods as therein lies much danger. A survey of the Botulinus poisoning last year shows that in nearly every case the consumer or the person who cooked the spinach or who served the ripe olives admitted that they detected something was wrong with them.

Every consumer should be taught never to eat any goods that are swelled or that do not have a natural odor and taste.

The standardization of the amount of water and product to be placed in cans of the various foods by the Standards Committee will practically stop loading with water which has been practiced by some canners in the past.

IOWA EGG LAW

The purpose of the egg law is to promote fair dealing in eggs, and increase the market value of Iowa's egg crop.

As with any other produce, the market value of any lot of eggs is governed by its quality. Bad eggs are worthless; good eggs command the highest market price.

In interpreting the egg law for the purpose of issuing rules and regulations, the purpose of the law has been kept clearly in mind, and such rules and regulations formulated as will tend to put our egg crop on a quality basis and thereby secure for the Iowa farmer the best price for this cash crop. Only such restrictions have been placed on buying as are necessary to prevent bad eggs entering market channels and thus lowering the market value of good eggs. These restrictions are not intended in any way to hinder free traffic in eggs by honest buyers, but to prevent the demoralization of the market by unfair buying methods.

While reliable information, showing the number of eggs produced is not available, Iowa probably ranks first as an egg producing state. The total income received by the state from this source, during the last year, probably amounts to about \$51,376,600. The average farm price for eggs during this period was 38.6 cents, which means that 133,100,000 dozen of eggs were marketed. This does not take into account, of course, the large number consumed on the farms of the state.

The following tabulations showing the contrast between present egg prices and those of a few years ago, will be of interest:

AVERAGE PRICE PAID TO IOWA FARMERS FOR EGGS ON
THE FIRST DAY OF EACH MONTH OF THE
YEARS SHOWN

	Jan.	Feb.	Mar.	Apr.	May	June	July	Aug.	Sept.	Oct.	Nov.	Dec.
1910	28	28	21	18	18	17	16	14	17	20	22	25
1911	26	21	14	13	14	13	12	12	14	17	20	25
1912	27	28	23	17	17	16	15	16	17	19	22	25

1920	55	45	39	37	38	33	37	44	48	53	64	61
1921	49	32	21	18	16	20						

There is only one method for distinguishing good eggs from bad ones, or which can be used for the purpose of grading, and that method is candling. Of the numerous devices sold for this purpose, the single hole or two hole candle operated in a darkened room has proven the most satisfactory. Devices designed for handling more than one egg at a time permit mistakes and carelessness to creep in and, as far as this department is concerned, their use is not advised.

Rules and Regulations Governing Licensed Egg Dealers.

1. The first licensed buyer of eggs (the huckster, the local retail merchant, or others) shall candle every lot of eggs that he buys (this should be done before settlement is made).

2. The licensee shall discard all eggs known as "addled," "moldy," "black-rots," "white-rots," "blood rings," "adherent yolks," eggs with bloody or green whites, eggs incubated beyond "blood ring" stage and all other eggs commonly classed as inedible.

3. The licensee shall pay only for good, edible eggs.

4. The licensee shall return to the producer, if requested or if possible, the "rejects" for the producer's own examination.

5. The good eggs shall be kept in a cool, dry place until sold or shipped.

6. Eggs should be shipped to cold storage within forty-eight hours. If held longer than forty-eight hours they must be recandled before shipping unless they are kept at a temperature of less than sixty degrees Fahrenheit. If kept at a temperature of from forty to sixty they must be recandled if held more than seven days. If kept below forty degrees no recandling is necessary.

7. Eggs known as "large hatch spots," "heavily shrunk eggs," "settled yolks," and "leaking eggs," are fit for consumption but will not stand transportation. They should be used only by the home community.

8. All "checks" and "cracks" shell eggs should be shipped in cases stenciled that they contain crack or check shell eggs.

9. All receivers of eggs should use care and intelligence in handling them, always keeping in mind that it is a waste of eggs, fillers, flats, and valuable transportation space to ship "rejects" or other eggs of doubtful character.

10. "Rejects" shall not be sold for human consumption.

11. Eggs unfit for food must not be held in possession unless they are broken into a container and denatured so they cannot be used for human food.

The following denaturants are approved for general use; carbolic acid, creosote and crude oil.

Special denaturants for special purposes shall not be used unless approved by this office.

12. Dirty eggs and washed eggs should be used where produced. They must not be accepted at a reduction in price equivalent to their market value.

13. All merchants, dealers and hucksters shall after candling eggs place on the top layer of every case of candled eggs a certificate stating the date of candling, by whom candled, and license number of licensee. This certificate shall be of the following form: (Note—this form should not be smaller than $2\frac{3}{8}$ by $4\frac{1}{4}$ inches.)

This case of eggs is packed and candled in compliance with the Iowa Egg Law and regulations provided for therein.

Candled by
Date Name of candler

Iowa Egg License Number.....

HENERY PRODUCE CO.,
Nester, Iowa

Since the question is often asked, "Who must be licensed?" the regulation pertaining to this subject is herewith re-printed:

"WHO MUST BE LICENSED?"

The law requires the following classes of dealers to take out egg dealers' licenses:

1. All merchants, hucksters and others buying eggs from producers unless such producers are also licensed egg dealers.

2. All dealers, regardless of the nature of their business, who sell eggs in quantities in excess of one case at a time.

The following are not required to take out a license:

1. Merchants who buy all their eggs from licensed dealers and who do not sell in lots greater than one case.

2. Farmers and other producers of eggs who do not sell or trade in eggs other than those produced by them or their tenants.

3. Bakeries, restaurants, etc., buying eggs for their consumption only are not classed as engaged in the business of dealing in eggs and are, therefore, not required to secure a license to buy the eggs consumed by them.

The licenses now in force expire March 1, 1923, at which time a new license must be taken out. A suitable blank for applying for the license will be sent to each dealer having a license expiring on that date, before it expires.

RULES AND REGULATIONS GOVERNING ISSUANCE OF LICENSE

1. After May 25th, it is necessary that all dealers engaged in the business of buying, selling, dealing in or trading in eggs, except those retailers who buy direct from dealers, having an Iowa license, and who do not sell in lots greater than one case, obtain an egg dealer's license.

2. The license fee is \$1.00 for the period ending March 1st, each year.

3. A separate license must be obtained for each place of business where eggs are sold.

4. Each license is numbered and numbers are usually assigned in the same order as applications are received.

5. Farmers and other producers of eggs are not required to secure a license for the purpose of selling or trading in eggs produced by them.

6. Buying, selling, dealing in or trading eggs in violation of the egg law, by any person, firm or corporation, is an offense and renders the offender subject to a fine of not less than \$10.00 nor more than \$50.00.

WEIGHTS & MEASURES

In presenting our annual report I feel that the work has much to commend itself to right thinking people. It is a work of tremendous proportions which affects all classes of citizens, as the application and the underlying principles of the weights and measures law affect more people than do any other laws on the statute books. More stress is laid on the enforcement of weights and measures laws since they affect the class of citizens who can least afford to protect themselves.

Some of the activities should be enumerated here in order that the public may know of the great scope of the work. All scales, weights and measures in the state are inspected. In the last few years, much has been said and done regarding the inspection and regulation of gasoline measuring devices. No phase of our work has received more attention and rigid in-

spection. The work of testing the thousands of gasoline pumps and measuring devices requires much time and labor. The most encouraging feature of it being the wholehearted co-operation given by the various manufacturers of these devices and oil companies, with the result that these devices have not only been remodeled and improved upon, but a number of entirely new types have been put on the market, made to meet the weights and measures regulations. The reweighing of commodities in the various stores, and of loads of coal, as well as checking up the peddler, who has been the cause of more trouble to weights and measures men than any other type of merchant. This class of trade is made up of individuals of miscellaneous morals and dispositions. Many of them honest and willing to do what is right, but we are sorry to say, a great number with tendencies to increase their profits by trickery if given a chance. So it is that they must be constantly watched at all times. Many of them persist in using incorrect equipment, others take chances and give short weight.

This shows a few of the illegal weights and measures which have been found in use in the state. They were all condemned and confiscated by the department.

We have many complaints against coal dealers delivering short weight and upon a recent investigation of a complaint from one of our large cities in the state, we found some extreme shortages. The guilty parties were prosecuted in the courts, were convicted and fined. Some of the shortages are as follows:

340 pounds short on 2,000 pounds.

425 pounds short on 4,000 pounds.

660 pounds short on 4,000 pounds.

One coal man whose scale was condemned, defied the state and continued to weigh on them and tore the tag off. He was arrested and given a fine of \$50.00 and costs.

The routine office work has been materially increased, particularly in the matter of correspondence. Questions are continually being submitted by individuals as well as by manufacturers. The Thirty-Ninth General Assembly enacted a law providing a \$3.00 license fee on all gasoline pumps and meters; which materially increases the office work. There is also a great deal of correspondence resulting from daily reports of inspectors; reports of shortages from various sources; requests for scale inspection; prosecutions; complaints and reports of similar nature, which demand a large amount of attention from the Chief Inspector of Weights and Measures. Hundreds of scales and measures of various types have been confiscated and condemned. The increase in the use of the Auto Truck has been the cause of many new scales being installed. The department's records show that there have been 4,480 platform scales, 4,900 counter, 4,600 creamery scales inspected. These do not include the number of weights and measures submitted by cities, firms and individuals for verification as to their accuracy. Ten per cent were found to be incorrect. There were also 1,710 gasoline pumps inspected, of which 26½% were found incorrect; 663 measures of which 130 were incorrect.

During the year ending November 1, 1921, the department inspected 4,025 "heavy" scales, that is, scales used by grain elevators, coal mines, retail coal dealers, railroad stock scales, sugar refineries, canning factories, etc. The revenue received by the state for the inspection of these scales amounted to \$12,710.98.

The charge for inspection of scales of a capacity over 500 pounds up to and including 4,000 pounds capacity is \$1.00; over

4,000 pounds up to and including 21,000 pounds capacity, \$3.00 each; scales over 21,000 pounds capacity not including railroad track scales \$5.00 each; railroad track scales \$10.00 each; all hopper or Automatic scales \$2.00 each.

The revenue received by the state for scale licenses is \$6,048.00. Of the number of scales inspected 356 have been condemned for repairs; more than 280 were adjusted or their operators were instructed to make changes that would render them accurate.

The revenue received by the state for gasoline pump licenses from July 1, 1921, at which time the law became effective, up to November 1, 1921, is \$13,500.00.

All fees collected under this act, as listed above, are immediately turned over to the State Treasurer and credited to the general fund of the state. This department is operated by a direct appropriation of the Legislature and cannot use any of the fees collected.

Honest weight and measure can only be secured through the vigilance of the purchaser.

The housewife should buy only by weight and she should have a pair of scales and make a check of the various purchases from time to time to determine whether she is getting correct weight. Just recently we received a call from a lady who had purchased five one pound packages of nuts and she stated she was one ounce short on each package, as she said she had a scale and weighed them. Upon investigation we found the merchant's scale was off one ounce on one pound. She received her five ounces of nuts for which she had paid fifty cents (50c) per pound. It is also necessary that the purchaser have a knowledge of the number of pounds he should receive for a bushel or fractional part thereof.

Following is a list of the articles or commodities which must be sold by avoirdupois weight.

WEIGHTS OF ONE BUSHEL, ONE PECK, AND ONE QUART OF CERTAIN PRODUCTS AS PROVIDED BY THE LAWS OF IOWA.

	1 Bush. Pounds	1 Peck Pounds	Oz. 1 Qt.
Apples	48	12	24
Apples, Dried	24	6	12

IT IS TIME TO MILK

(By Hugh G. Van Pelt.)

It is of record that once upon a time an Irishman stole a watch and a Dutchman stole a cow. Both were caught and lodged in jail in adjoining cells. Time passed slowly and became tiresome under the conditions.

To break the monotony and to twit the Irishman, the Dutchman said, "Pat, vat time it is?" and, characteristic of his nationality, Pat replied, "It is toime to milk."

Ever since I heard Judge Quarton of Guernsey fame tell that story the first time—and I say the first time advisedly—I have wanted to repeat it because it carries a peculiar significance that is not to be ignored by individuals, communities, states or nations.

It is legend that there came a time in the history of Denmark when as a nation, poverty and seemingly insurmountable indebtedness stared her in the face—when the one great problem was that of restoring national solvency.

Then it was that Denmark decided it was time to milk, and from that day to this Denmark has advanced in prosperity until she ranks among the richest countries per capita and as the most noted producer of dairy products.

Such is the significance of Pat's reply, "It is toime to milk" as it applies to nations.

It is no secret that in the early days of Wisconsin wheat was grown continuously year after year until wheat would no longer grow profitably nor would any other farm crop.

Then it was that the question of what to do arose and the reply was "It is time to milk."

Recently, in an address to bankers, the head of the Federal Reserve Bank of the Northwest made the statement that in Wisconsin there was not one of the 990 banks delinquent and that they had sent more than \$50,000,000 into the Chicago district during the past year; this during a year when states that are practicing other forms of agriculture almost to the exclusion of dairying are clamoring for credit.

Such is the significance of Pat's reply, "It is toime to milk" as it applies to states.

In the September 15th issue of the Dairy Farmer appeared an editorial telling of a community in North Dakota that is this year experiencing its sixth consecutive crop failure.

One crop failure, especially if it came this year, would suffice to discourage most sections, but not the stout-hearted North Dakota community because:

In the early days of crop failures when the inevitable question of what to do was propounded someone said "It is time to milk," and last year the average gross income from 17 farms in the crop failure district was \$2,325.83.

Strange as it may seem, these men, under the worst of farming conditions, are enjoying greater prosperity than their fellow farmers in sections of the state that have bumper farm crops.

Such is the significance of Pat's reply, "It is toime to milk," as it applies to communities.

John W. Newman, former Commissioner of Agriculture of Kentucky, has eight farms operated by tenants. During the war the price of tobacco was high and these tenants specialized to the extreme in growing the weed. Mr. Newman says they profited to the extent that each of them became worth from \$4,000 to \$5,000 and then a year ago, when the price of tobacco dropped, they lost all and began borrowing money of him to operate the farms.

After loaning them a total of \$3,000 Mr. Newman called them together and in his own words said, "not another cent will I loan you. I will place on each of your farms 10 cows, eight sows and 100 chickens and if you can't make money off the farms, you cangotoel".

In other words he told them, "It is time to milk."

Continuing, Mr. Newman said, "Since that time each of these tenants is coming to me with money instead of for money."

Such is the significance of Pat's reply, "It is toime to milk"; as it applies to individuals.

From every section of the United States comes the cry that farm crops are selling below cost of production and yet the individual, the community, the state or the nation that is milking good cows, breeding up productive herds and caring for them well is prospering.

Compared with prices of all other farm commodities and on the basis of cost of production, the prices of dairy products are higher today than they were at any time during the war when everybody admitted they were rich.

Further arguments are unnecessary to carry the conviction that of all times within the memory of the present generation the hour has arrived when to every man who farms there is much significance in Pat's reply, "It is toime to milk."

DEVELOPING YOUR HOME MARKET

We have always been of the opinion that there is nothing too good for Iowa and we believe that the majority of the people of this state want the best food products, which money can buy.

We are quite sure that the citizens of Iowa are getting very little of our best **Iowa Butter**, which is a condition we are sorry exists and we are inclined to place the responsibility in this matter entirely with the management of our Iowa creameries, as we are satisfied that there is a ready market within the state for all of our best butter, especially "State Brand" butter, at a premium over what the same product would sell for on the eastern markets.

The following article, by A. M. Hein, manager of the Farmers Co-operative Creamery, at Hull, Iowa, proves that our assertions are correct. Mr. Hein has given this subject a great deal of study and has demonstrated that it is possible to develop a home market for quality products, such as is found in our State Brand butter.

In developing local markets for your butter two important factors are necessary. First, quality and second, publicity.

You may get along very well when you have the quality, but I have found that to make double time, just spend a little money advertising, telling the public what you have, and if it is different or better than any other brand tell them so, and be sure the goods you advertise will back you up. Then the rest will shape its way.

I want to first take up in a brief way five points that I consider the most important as to why local marketing is more profitable.

First—the Price. You all know money is what makes the things go, and so we are all after the price. Many of us cannot tell definitely what our butter is going to net us when we ship to the big markets, so you have this advantage in home marketing that you make the price. If you make it too low that is your lookout, but we will leave that to you.

Second—the Freight Transportation is and has been high, amounting approximately to 3c per pound of butter from our station; this is a nice little sum that would pay for advertising and distributing the butter in local markets.

Third—Deterioration in Transit. The results from this deterioration when butter is at its best benefits no one. The refrigerator car people or the railroad company will not say that your butter is too good to be piled in a moldy, musty car—no, it is to pile it in and take your medicine with the rest of the guys. If you have a poor quality butter the result will also be a heavy cut in price.

Fourth—Shrinkage. There is usually some loss on every tub of butter shipped. Some buttermakers may think because they allow one-half pound to every tub that there is no shrinkage—the half pound was given in as good weight I suppose.

Fifth—Market Conditions. You no doubt are all aware of the fact that market conditions have much to do with the sale of your butter in the big markets. If the goods arrive on a sluggish market and prices are going down, the chances are the goods will not be sold until the bottom is reached. This again results in a heavy loss. In local marketing you will have the goods sold at a high price when you were paying the high price for fat, and when the drop comes you will be paying considerably less for fat, so the danger for losing is only slight.

Now then, why is it not more profitable to develop local markets for your butter in this state? With a little advertising and getting right after it you can get good results.

We have found it considerably harder to get started in a big city with our butter than in smaller towns. Most large cities have one or more creameries where the small towns we furnish have no creamery.

In giving you our experience how we managed to get our butter started in a city something like 60,000 population where three big central plants are located. It has been whispered to me several times that it is a hard thing to get started in the big cities for several reasons. One of them was the service the city merchant would receive from their home creameries—they would not need to stock up for more than a day's supply, etc. The other main reason was that the majority were boosters for their home product.

These were the two factors we had to deal with before undertaking this proposition of placing our State Brand in Sioux City.

There was only one thing to do and that was to create a demand for our butter and this had to be done by advertising.

We decided to start a parcel post business and in this way get in touch with the consumers who were looking for a good quality of butter. We ran a large display ad twice a week with the State Butter mark in the daily papers. After a short time we cut the ad to a small one with a small cut of the butter-mark, and made the price for three days on each ad. We worked up quite a business in this way, not only in Sioux City, but from other towns in this state, and other states as well.

After a month or so we began to think about getting some one to take over this sale and work it through the best groceries. We managed to get in touch with a good man in the city that had been in the grocery business for some time, but had sold out his business, and he took over exclusive sale on this butter.

When this man went to call on the stores it was almost impossible to get the merchant to listen to his butter story, as they already handled three brands and some of them more. So nothing could be accomplished in this way. We made up our mind to put on another advertising campaign—one that would take effect at once. This we did by hiring some women demonstrators who would make a house to house canvass taking small samples of butter about an inch square and one-fourth inch thick, or a little less, put up in a small waxed paper sack. These were given to the lady of the house with some literature pertaining to "State Brand Butter." We had four girls for a number of days to do this work. At the same time orders were taken for one or more pounds for a trial order to be delivered by the grocery with whom they did their trading. This worked out very well, and in the evening these orders were sorted out and when 10 or more pounds were sold through any of the stores our man would deliver this amount the next day to the grocery store for delivery. In this way we had the merchant where he could not very well refuse, because his customers demanded this butter from him. Some stores ran up to 30 pounds during the day's campaign. In this way we reached better than one hundred stores and meat markets. However, we have sift-

ed them down to something like 50, as 25 per cent would not keep our State Brand in stock, because the price was too high and because we would not promise them that we would meet competition in price, etc., and the other 25 percent were slow pay.

Right after the week or so of our demonstrations from house to house we ran a 30 foot reel in five of the picture shows. Alternately we did this for thirteen weeks, and we believe that this is one of the cheapest ways of bringing some thing before the public that they will talk about. Our butter was very well advertised all over the city and I wish to say that we enjoyed a very large business during the past season from our adventures—we sold as high as 1,000 pounds some days in prints in Sioux City alone then we had considerable other local trade which amounted in all during the best month last summer to over 31,000 prints.

During our advertising campaign we emphasized strongly that there was no neutralizer used in the manufacture of this brand. The word neutralizer was used more or less in the daily papers at the time we started our advertising. People read about the neutralizer decision being postponed from time to time and the consuming public began to inquire about this new process that they never heard of before.

I remember the first time I went to see our ad in the movies. As it happened a couple was sitting ahead of me—I presume they were a married couple. When our State Brand appeared on the screen in that large circle, leaving ample space at the top for these words—THERE IS NO SUBSTITUTE FOR GOOD BUTTER—. Then on the right of the trade-mark came flashing the words—THE STATE PROHIBITS THE USE OF A NEUTRALIZER IN THIS BRAND. Down a little farther it reads—TAKE ADVANTAGE OF THIS PROTECTION OFFERED. DEMAND IT OF YOUR GROCER. At the bottom the distributor's name appeared with his phone number.

Now about this couple which I mentioned amused me somewhat when the word "neutralizer" flashed on the screen the lady turned to her man inquiring: "What was meant by neutralizer?" He replied: "Some kind of dope to make it look natural". Not a bad guess, was it? I believe the word "neutralizer" was new to both of them. It is just a year ago next

month that we started out with the parcel post business, and in these eleven months we are well satisfied with what we have accomplished, and had many more ideas worked out to use in connection with our campaign had we gotten warmed up with our competitors but as it was we have got along fine thus far.

Opportunities for working up a home market for quality butter are good most any where. You may have to figure out your own salvation how it's best to place it on the market so the public can get it.

But remember that quality and publicity with plenty of tact behind will do the business.

Try it and see for yourself.

DAIRY FARMING, THE MOST PERMANENT INDUSTRY

As a safe and permanent occupation, none of the common forms of farming compare with dairying. Still, many dairy-men have regarded the future of the industry with doubt. Falling prices during the early months of the present year, lead them to wonder and worry regarding their heavy investments in live stock, land, buildings and machinery. Let them consider the following seven reasons why dairying is the most permanent form of farming. We could give more and will gladly do so, if called upon, however, we rest assured that seven good reasons will more than remove the last vestige of doubt from the minds of most people.

First—Milk and milk products are absolutely essential to life, health, and normal growth. This point is becoming better known year by year to our reading and reasoning public; as a consequence the consumption of milk and milk products is steadily increasing. So is the use of substitutes, you may say, and you would be right. War prices and highly commendable patriotism popularized the use of substitutes. But none of the so-called substitutes, no matter how extensively advertised, dare meet pure milk products in open battle. Why? Because milk products contain vitamins, and vitamins are absolutely essential to normal health and growth. They are not found in appreciable quantity in other animal oils and in vegetable oils, and it is these oils that form the base of all substitutes on the market.

Second—During the past five years our population has in-

creased seven per cent; milk consumption has increased ten per cent in the same period. What do these indisputable facts promise for the future? The population of the United States is increasing rapidly and history will show that it has been on the steady increase for the past century. Immigration and the natural increase through births assure further growth. Education in child welfare and general health insists on milk for the growing child. Therefore we may expect to see milk consumption increase far more rapidly and markedly in the next generation than in the decade just ended. What could be a more promising guarantee for the future than an ever increasing and expanding market.

Third—Dairy products are a source of regular and reliable profit. The market for dairy products has never been controlled by a few; it never will be. Through co-operative creameries and cheese factories farmers can supply a staple, finished product, ready to be disposed of direct to the ultimate consumer if necessary. This in a sense makes possible the the elimination of the middleman, and has been used by farmers where it was found that the "split" in profits was going against them. Once a month, twice a month, or even every week or day in some cases, the dairyman receives payment for the work his cows have done for him—and cows don't work on an eight-hour day basis either. Thus the dairy farmer is enabled to pay cash for things he buys and is free to "stand from under" when hard times threaten.

Fourth—Dairying and diversified farming are one and the same. Diversified farming produces a variety of crops for market; a failure of any one or two does not mean bankruptcy for the farmer. The dairyman does not have "all his eggs in one basket." Contrast this condition with the Corn Belt where wealth is measured in terms of corn, hogs, and steers. This year has seen the "bottom drop out" of the market for the three things he produces—commodities he has always considered as legal tender. As a consequence there is no money in circulation, farmers are not able to meet their obligations, farm sales made a year ago at high prices are falling through, and banks are unable to assist farmers in making loans. In Wisconsin, primarily a dairy state, conditions are much better in spite of decreased prices. Banks are still able to take care of the needs of farmers, and farmers seem to be able to "scare up the cash"

with which to meet their debts. Why? Because diversified farming with the timely aid of dairy dollars can meet and is successfully meeting the emergency.

Fifth—The dairy herd conserves and even increases soil fertility, assuring good yields of farm crops in future years. At the same time the herd provides a sure, prompt, and profitable outlet for grains and roughage grown on the farm. Land that supports good dairy herds becomes richer year by year whereas land devoted to raising grains and hay for market soon becomes sadly depleted unless carefully managed and unless commercial fertilizer is purchased. Every ton of corn sold off the farm, worth in normal times about \$20.00 takes with it \$6.50 worth of plant food; every ton of wheat worth \$35.00 takes \$17.00; every ton of butterfat worth about \$1,000.-00 takes only 49 cents worth of plant food! Meanwhile the herd is returning many times this amount in fertility. It pays to market crops in the milk can. Keep these facts in mind when you haul away your next load of oats or hay.

Sixth—Our biggest and most successful dairymen, with years of practical experience to back up their statements, say, "The dairy crop is the only one which has never known a complete failure." They base this statement on a few simple facts. In the first place dairying is more quickly adjustable to new conditions and prices than any other kind of farming. We can easily see why. Field crops are marketed once a year, and the price is forced down—temporarily—because of the overload of any single crop on the market. The marketing period is not distributed. To purposely hold for higher prices means to wait for the money tied up in the crop. Not so with the dairyman. He markets his "crop" every day, or every few days at most, and is paid once or twice a month or oftener. His returns no doubt do vary in times such as the present when all lines of industry are being readjusted, but a few months of low prices do not condemn the industry. The reasoning farmer notes a drop of 15 to 25 percent in milk prices, then compares this to the drop of corn from \$1.50 per bushel to around 60 cents, and pork from 23 cents to 9 cents. He figures his average earnings for the last two years and is satisfied. He knows that no business is entirely free from ups and downs; he also knows that none are more highly favored than dairying in this respect.

Seventh—The dairy cow is a home builder. Farming, no matter how profitable, never reaches the position of dignity which is its heritage until the farm home becomes so attractive that it is the greatest pride of the entire family, something to be handed down from generation to generation. The growing boy or girl does not look forward with pleasure to the time when they will inherit a mortgage-ridden, impoverished ruin. They do thrill at the thought of a farm both fertile and fair, stocked with the blood left as the breeders' handiwork of father and grandfather. The dairy herd always has stood and always will stand as a symbol of permanence for the good farm, the real farm home, the farm from which the boys are not easily attracted to the job in the city nor the girls lured away to the office.

WORK OF THE NATIONAL DAIRY COUNCIL

The National Dairy Council has been functioning under its present plan for a period of two years with considerable success and in consideration of financial support from the Dairy Industry is adequately prepared through contact with and co-operation from educational and welfare agencies, as well as commercial, to enter into the following agreement:

I. To promote a clearer understanding of the service of Dairy Products in the diet of the nation with consequent increases in consumption of those products and favorable market conditions by means of

A. Education work in the schools, colleges, and universities, access to which has been granted by authorities because this is an "Educational Organization." Its help has been sought by over 30,000 school teachers.

B. Educational, health, and welfare clubs and associations, such as Red Cross, Parent-Teachers, etc., have sought and secured publicity material, pamphlets, speakers, etc., from the National Dairy Council, because it is educational, which service will continue without question.

C. Conducting milk and Dairy Products campaigns where whole cities and communities join to emphasize the need of Dairy Products in the diet.

D. The Public Press, Billboards, Window Space, District, State and National Fairs and Conventions, and Commercial agencies, have been used where such service was warranted.

During the past year the National Dairy council has supplied over four million (4,000,000) pieces of literature to the consuming public, it has circulated three motion picture films, thirty seven picture show slides, four billboard posters, several mechanical devices which graphically demonstrate food values of Dairy Products at fairs and in window displays. The Council has supervised more than one hundred campaigns in cities and towns fostering increased use of Dairy Products, notable among these being Philadelphia, Cleveland, Minneapolis, St. Paul, Trenton, and Youngstown. It has also maintained booths at the National Educational Association Convention with 8,000 teachers attending and at the American Medical Association Convention with 10,000 doctors present. These functions are increasing almost more rapidly than they can be cared for with the present force of workers—thirty-two in number.

The results of this type of work and stimulation of interest cannot be presented concretely. However, these facts are pertinent. During the seven months, March to September, Philadelphia milk sales were 6.65% greater than for the same period of 1920 in spite of a decrease in population. Detroit reported an increase of 20% over a preceding similar period as a result of a campaign. One milk distributor in a western city said, "My milk sales are 18% greater than in 1920, which I attribute entirely to the education work which has been done." Butter production has been 100,000,000 pounds larger during the first ten months of 1921 than for the same period of 1920 and smaller storage stocks prevailed at the close of the period in 1921. Most leading butter manufacturers state that the educational work of the Dairy Council has stimulated much of the consumption which has made the butter market favorable. The manufacture of margarines during the first nine months of 1921 decreased almost 50% as compared with 1920. And, all of this increase in consumption of Dairy Products has been maintained in the face of a most serious national business depression with decreased sales of practically all other foods.

II. The National Dairy Council agrees to scrutinize and combat such false advertising and publicity of butter substitutes as may come to its attention. It has already secured the withdrawal of large numbers of false billboards, newspaper and circular advertising, by complaint to the vigilance committee

of the associated advertisers, Federal Trade Commission, Attorney General of the United States, and State Educational Institutions.

III. The National Dairy Council agrees to place its educational material and publicity in such channels as appear most serviceable but believe that to serve the butter industry best it should distribute most throughout the area of New England and North Atlantic States where more than 50% of the creamery butter is consumed and one-third of the entire population of the United States are located.

IV. The National Dairy Council agrees to maintain receipts from the butter industry in a separate fund, expenditure of which shall be supervised by a committee of butter manufacturers, selected by the butter interests supporting the Council, in co-operation with the officers of the National Dairy Council. It is suggested for the approval of such committee that the fund be budgeted as follows:

- 40% Billboards and window posters;
- 30% Pamphlets, etc., for educational work;
- 20% Dairy Products Campaigns;
- 10% in general publicity and investigational work.

V. In consideration of your financial support the National Dairy Council will make report of receipts and disbursements with explanation at least semi-annually.

To do the most successful and far-reaching work a fund of \$150,000 seems advisable for butter publicity work as outlined under Division No. IV. To raise this amount it will be necessary to receive payments in the amount of 25 cents per thousand pounds of butter manufactured, or 30 cents per thousand pounds of fat handled, in creameries making a total of 600,000,000 pounds of butter. Do not look upon this as a contribution, or as joining one more organization. The money you pay to sales agencies, advertising agencies, commission firms, transportation mediums, etc., is based upon volume. Here you are doing fundamental market development work which cannot be done individually. You are buying a service just as truly as any other one of your marketing agencies.

We are submitting this report of the work accomplished by the National Dairy Council for the reason that thousands of dairymen in this state are supporting this work, through their creameries and other marketing organizations and we believe

that it will be of interest to everyone to know just how this work has been handled.

WORK OF IOWA STATE DAIRY ASSOCIATION

(By J. P. Eves, State Dairy Expert.)

The demand made on the Iowa State Dairy Association, during the past year has been greatly increased in spite of the financial depression. This condition, however, is only to be expected since farmers always appreciate the possibilities of dairying during the period of hard times.

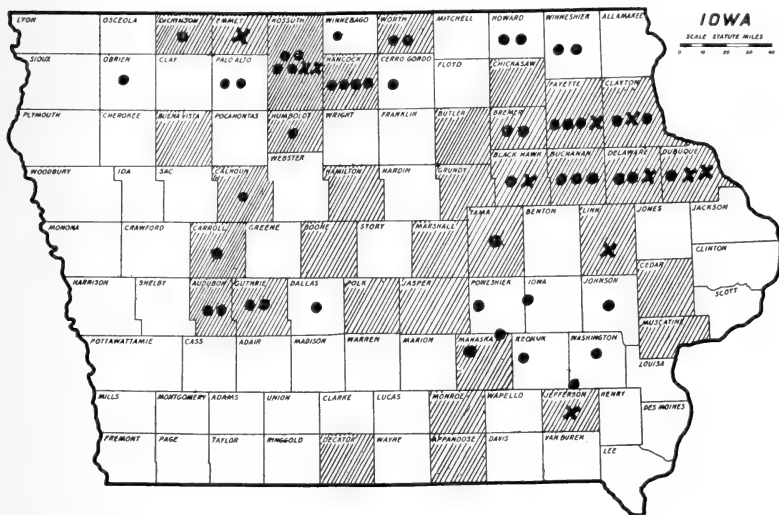

The past year has shown a very decided trend toward dairying. This holds true in practically every county in Iowa. A comparison of the financial conditions in various counties of Iowa, as well as the comparison between states, has proven conclusively that the dairy sections are weathering the times in a very satisfactory manner as compared with practically every other agricultural section. This fact has been the cause of an almost unsuppliable demand for dairy cows. Bankers who would not ordinarily loan money for any purpose have been very free in the loaning of money to men to buy cows. It is a very noticeable fact in Iowa that this demand is coming from sections where the grade calf clubs, previously organized by the Dairy Association, have been in existence. These clubs brought, in many instances, the original dairy cattle into the communities. The farmers have finally realized the value of special purpose dairy cattle on the Iowa farm. I can cite one community where a grade club was organized in 1919. During the fall of 1921 five car loads of grade dairy cows have been purchased and distributed in this same community.

It has been the attitude of the Dairy Association, however, that many farmers are not to be encouraged to turn to dairying. With a percentage of the farmers, it is only a temporary idea with the one purpose of merely supplying a satisfactory temporary market for their grain and hay and to help carry them over the hard time period. We have contended that it is wise to encourage only those men who are interested in going into dairying as a permanent enterprise.

In comparing one year's report with another, we necessarily find that there is a constant changing of the line of work followed. The activities of the Dairy Association must of necessity respond to the demand placed on it and the change of

financial conditions has, of course, made a greater change than one would expect between one year and another.

This map will illustrate clearly the counties in which work was done by Iowa State Dairy Association Representatives during 1922.

- × Represent the calf clubs organized in 1921.
- Represent the calf clubs organized in previous years.

DAIRY CALF CLUB WORK

The boys' and girls' dairy calf club work, in spite of the fact that most calf clubs have suffered a decrease during the past year, gained in popularity. The Dairy Association is co-operating with and receiving the hearty co-operation of the Club and Dairy Extension Divisions of the Iowa State College in this work.

1921 was the banner year from the standpoint of the number of pure bred clubs organized and the number of members owning calves in these clubs. The comparison of three years' work in which the clubs have been organized shows the following:

1919	Four	Pure Bred Clubs Organized	90 Members.
1920	Six	Pure Bred Clubs Organized	81 Members.
1921	Eight	Pure Bred Clubs Organized	123 Members.

With but very few exceptions, the bankers in all localities are willing to finance the dairy clubs in spite of close money

because they realize the importance of developing the dairy industry. To my knowledge, only two clubs were held back this year because of lack of finances.

1921 CLUBS
Pure Bred Calves.

Organized by	No. of Calves	Breed
Dubuque Co. Holstein Brdrs. Ass'n	24	Holsteins
Linn Co. Holstein Brdrs. Ass'n	25	Holsteins
Fayette Co. Farm Bureau	5	Holsteins
Jefferson Co. Farm Bureau	8	Jerseys
Delaware Co. Holstein Brdrs. Ass'n	5	Holsteins

Grade Calves

Kossuth Farm Bureau	7	Holsteins
Fenton	2	Guernseys
Titonka	10	Guernseys
Emmet Co. Farm Bureau—Ringsted	11	Guernseys
	14	Holsteins

It has been considered advisable to make some change in the distribution of time spent on club work and, consequently, more time is being spent on the follow-up work of the clubs already organized and less time given to the matter of organizing new clubs. It has proven that the greatest success is not possible unless a very close personal touch is maintained with the club member. This takes time, necessitates a number of visits to the club during the year, but has been the means of establishing the clubs on a good deal firmer and more successful basis.

The number of clubs organized in which grade calves were distributed has, in accordance with this policy, been limited to those counties in which the Farm Bureau was willing to get behind the club in the same manner in which they would follow up a pure bred club. This has, of course, limited the number of clubs considerably but we believe, in the long run, it will be the more effective. The grade club has proven to be a mighty effective means of introducing good productive blood around cooperative creameries where they are often sadly in need of a better class of cows. In every instance where a grade club has been organized, it has been a forerunner to the

introduction of grade cows and pure bred sires. In a number of localities the demand for a pure bred club has resulted from the previous organization of a grade club.

All grade clubs have been organized in the past with the purchase of "baby calves", by which I mean young calves three to five weeks old which are shipped in by express. Great care has been paid in the purchase of these calves. During 1921 all calves were purchased from Waukesha County, Wisconsin, through the Breed Associations. The present demand for cattle has been the means of advocating, in many instances, the organization of clubs with older bred heifers, believing that this would bring a much quicker return. We have found that the bankers have been more willing to finance such a club because of the quicker returns possible.

An added feature of the three period for clubs is just developing because the oldest pure bred heifers have just freshened during the past year. The members are being required to keep a record of the milk and butterfat produced during the year and some very creditable records are being secured. In Fayette County, where liberal prizes were offered by a local banker, an interesting competition developed. Two prizes of \$50.00 each to be given to the members, making the highest seven day record, provided the incentive. Bob Stewart, aged ten years, won the prize of \$50.00 on the heifer making her record as a senior two year old. This club heifer, Miss Diana Butterboy Beets, produced in seven days 21 pounds of butter from 405 pounds of milk. Mike Stewart, his older brother, with his club heifer, Miss Eliza Highland Johanna 3rd, won the \$50.00 prize for the heifer freshening, as a junior two year old with a production of 17.2 pounds of butter from 326 pounds of milk. Bob Stewart's heifer has been continued on her test by his father and will complete a record of very close to 600 pounds of butter.

The success of a calf club can be pretty well decided by the public opinion of the people connected with it. It has been a source of satisfaction during the past year to see the greatest interest in clubs exist in those counties where the most work had been done previously. We now have a number of counties in which at least four clubs had been organized. Fayette County has organized three consecutive pure bred clubs. Du-buque County first organized a pure bred club in 1920 and came

back strong in 1921 by the organizing of two more with a total enrollment of 58 members. Kossuth and Buchanan Counties are continuing their clubs that have all been organized on the three year basis. The grade calf club has proven very effective in Kossuth County around the creameries and has been a decided advantage in stimulating the interest in dairying.

EXCHANGE BUREAU

At all times an effort is made to place the buyer and seller of dairy cattle in touch with each other. Assistance is always offered to those parties who are buying their initial dairy cattle and wish experienced help. The past year has shown the greatest results of these efforts. A large number of cows and heifers have been purchased as well as a number of pure bred sires secured to place at the head of herds that have not previously used registered dairy bulls. It is a conservative estimate that at least \$25,000.00 worth of dairy cattle have been purchased during the past year through the medium of the State Dairy Association. At least fifteen pure bred sires have been purchased through the efforts of the Association's representatives.

BREEDERS' ASSOCIATIONS

A greater amount of time has been given to assisting the state and county dairy breed associations during the past year. It is the belief that through such organizations this office can do more effective work in improving dairy conditions within the state and within the individual county. Fifteen different breeders' association meetings were attended during 1921. Of this number, nine definite organizations are now in existence. It is planned that such organizations should adopt some definite piece of development work to improve and develop the dairy industry.

CLUB EXHIBITS AND JUDGING CONTESTS

1921 witnessed the first exhibit of pure bred dairy club heifers at the Iowa State Fair and Dairy Cattle Congress. The start was not a large one but it bids fair to develop into one of the more interesting and educational exhibits of club work. In addition to these, two larger exhibits of all counties in which

pure bred dairy calf club work is being followed had their individual county exhibits.

Fayette County can be cited as having one of the most successful county exhibits. The County Fair at West Union and the Farm Bureau are co-operating in the maintenance of a club camp. All club members are required to show their calves at the County Fair and the camp is maintained so as to provide for the members a comfortable, as well as a safe place to sleep. A competent cook and care-taker, to provide meals and look after the members in a general way, is secured. This club is proving one of the big features in popularizing the work in that county.

Considerable stress has been placed on the judging demonstrations and judging contests conducted among the different club members. This work has developed a great deal of interest and friendly competition. Judging demonstrations and assistance in training was given to five different county teams previous to the State Fair. In addition, time and assistance was given in training the three calf club boys selected to represent Iowa in the Dairy Judging Contest at the National Dairy Show.

OTHER PROJECTS

There are always calls coming on various projects that could hardly be listed under the major lines adopted by the Association. These requests are varied and rather out of line with the usual work of the Association, but assistance is given whenever possible. We have had the co-operation of the State Dairy Council, The Extension Department of the Iowa State College and the Dairy and Food Commission at all times. Assistance has been given these organizations whenever possible.

PROJECTS FOR 1922

The plans for 1922 call for the pushing of the work much the same as during the past year.

The calf club work will be featured because I predict a great increase in the numbers and in profitable results during the coming year. Many counties are being urged by the bankers to take up this line of work. The interest of the farmers themselves and of the boys and girls is also rapidly turning toward the dairy calf club work.

The pure bred sire work will be one of the features. It is hoped that some form of pure bred sire campaign will be

mapped out that will be effective in Iowa. It is certainly an opportune time to push this line of work because of the comparatively reasonable price at which good pure bred dairy sires can be purchased.

Assistance to state and county breed associations will be given additional attention. It is the belief of the Dairy Association that these different organizations should be fostered and given all possible co-operation and assistance.

The Exchange Bureau will be continued and an effort made to make it more effective.

These many lines, in addition to the general demand, always coming during the year will give the representative of the Iowa State Dairy Association a full schedule for 1922.

The work of the Laboratory is shown in the following table:

Cream and Milk	1978	Samples
Ice Cream	141	Samples
Miscellaneous Foods	65	Samples
Paints and Oils	19	Samples
Butter	194	Samples
For Attorney General and County Attorneys	243	Samples
Insecticides	43	Samples
Board of Control	10	Samples
Seeds	35	Samples
Stock Foods	180	Samples
Pharmacy Commission	2	Samples
Bacteriological	140	Samples
TOTAL	3050	Samples

The amount of work done in the Laboratory this year is gratifying, being a material increase over last year and represents the work of two chemists with the exception of about two months of work by a third chemist, employed on half time.

LAWS ENFORCED BY DAIRY AND FOOD COMMISSIONER

DAIRY LAW

The object of the dairy law is to insure the manufacture of clean, wholesome dairy products of uniform quality and possessing high nutritive value, and to encourage and promote all branches of the dairy industry, thereby securing for Iowa farmers a steady and fair market for one of Iowa's most valuable agricultural products.

FUNCTIONS OF ASSISTANT COMMISSIONERS AND DAIRY INSPECTORS

Inspection and educational work relative to sanitary conditions of dairy farms, cream buying stations, creameries, condensed milk factories, cheese factories, ice cream factories.

EDUCATIONAL WORK AT CREAMERIES

Instructs buttermakers in new methods of handling raw materials and manufacture of butter.

Confers with and addresses creamery boards and assists in moulding policies of the creameries.

Assists in the building of new and remodeling of old creameries, and installation of new equipment.

Periodically checks moisture content of the butter being made.

Periodically checks salt content of the butter being made.

Studies methods of manufacture at the creameries for the purpose of increasing the efficiency of the plant.

Checks cost of production and costs of marketing.

Advises creamery as to the best sources of equipment and materials.

Assists in securing frequent and regular transportation facilities.

Assists in securing satisfactory markets in eastern cities for butter.

Tests creamery scales, both test scale and platform scales, to insure accuracy and fair dealing.

Schools operators in conducting Babcock test.

Holds examinations to determine competency of candidates to hold license to perform Babcock test.

Checks and controls production of navy butter.

Checks and controls production of Iowa trade-marked butter.

Assists in the organization of cow-test associations and calf clubs.

Assists in educational work tending to promote greater and more economical production of milk and cream.

INSPECTION WORK IN THE FIELD

Inspects stocks of butter and butter substitutes at warehouses, stores, bakeries and restaurants to see that illegal butter and illegal butter substitutes are not carried on stock or offered for sale.

Investigates and conducts cases relative to testing of milk and cream by unlicensed Babcock operators.

Investigates complaints relative to unlicensed milk plants and milk depots.

Investigates complaints relative to false reading of Babcock test and other unfair practices.

Investigates complaints relative to the application of the antidiscrimination law as affecting the purchase of butter fat.

FUNCTION OF THE LOCAL MILK INSPECTORS

In charge of local milk inspection work under supervision of State Milk Inspector.

Inspects dairy farms supplying market milk to his district.

Inspects conditions, scores and keeps records as to sanitary conditions of dairies, milk plants and milk depots.

Periodically tests percentage of fat and solids in milk sold in his territory.

Periodically secures and forwards samples to the department laboratory for scoring and bacteriological analysis.

Investigates complaints as to quality of milk delivered and relative to violations of the laws pertaining to production and sale of milk in his territory.

FOOD LAW

The object of the food law is to prevent the manufacture and sale of harmful, deleterious and adulterated foods, or foods which are sold under false representation as to their quality or value.

FUNCTION OF FOOD INSPECTORS UNDER FOOD LAW

Inspect Iowa establishments where foods are manufactured to see that no harmful or fraudulent adulterant enters their composition.

Inspects conditions under which foods are stored, transported and sold to see that adulteration is not practiced.

Surveys and forwards to laboratory samples of foods which he suspects or concerning which he receives complaint as to quality, adulteration or short weight.

Inspects retail establishments to see that no illegal foodstuffs are carried in stock.

Inspects quality of eggs, poultry and other farm produce sold to buyers and handled through trade channels to see that these products are not spoiled or in a condition which would lead to their being spoiled before reaching the consumer.

SANITARY LAW

The object of the sanitary law is to insure cleanliness in the manufacture, distribution and sale of foods.

FUNCTIONS OF INSPECTORS UNDER SANITARY LAW

Determine sanitary conditions in establishments where foods are manufactured, prepared, stored and sold.

Sees that raw materials are in sound condition and that decayed and other unwholesome materials are kept out of food products.

Sees that no diseased persons are employed in establishments where foods are manufactured or sold.

Sees that foods are properly protected from dust, dirt, foul odors, flies, rodents and other contaminating agencies.

Sees that restaurants, hotels and other similar establishments maintain proper toilet and washroom facilities in order that employes can keep clean.

SEED LAW

The object of this law is to prevent the sale of undesirable varieties of seeds, seeds of low germination, dirty seeds, seeds containing excessive amounts of weed seeds, and seeds which are short in weight.

FUNCTION OF INSPECTORS

Inspects seed houses to see that seeds are properly cleaned and stored.

Traces origin of seeds to see that undesirable and too slow maturing varieties are not imported.

Sees that packages of seeds are full weight.

Investigates complaints relative to fraudulent dealing in seeds.

Samples stocks of seeds and sends samples to laboratory for analysis.

WEIGHTS AND MEASURE LAW

The object of the Weights and Measure Law is to secure for all the true weight or measure of the commodity sold or purchased.

FUNCTION OF WEIGHT AND MEASURE INSPECTORS

Inspects and tests accuracy of all weights, measures and scales used in the purchase and sale of articles of commerce.

Checks weights and measures of articles bought and sold by weight or measure to see that proper weights and measures have been given.

Inspects heavy wagon, elevator and mine scales to see that they are properly installed and kept adjusted.

Investigates complaints relative to false weights and measures and other violations of the weights and measure law.

CONCENTRATED COMMERCIAL FEEDING STUFFS LAW

The object of this law is to secure fair dealing in the sale of commercial feeds.

FUNCTION OF INSPECTORS

Examine stocks of foods to see that they are properly labeled as to quality, etc., and to forward samples to laboratory for analysis and comparison of feeding value.

Inspects stocks of feeds to see that packages bear tax tags.

Other laws enforced by this department are:

Paint and Linseed Oil Law.

Egg Law.

Turpentine Law.

Cold Storage Law.

Commercial Fertilizer Law.

Calcium Carbide Law.

Insecticide and Fungicide Law.

The duties of inspectors under these laws are similar to their duties under the laws in which duties are set forth in detail.

CREAMERY STATISTICS OF IOWA

PART VII

Corn Belt Meat Producers' Association Eighteenth Annual Meeting

TUESDAY, DECEMBER 13, 1921

MORNING SESSION.

The President: Gentlemen, you will please come to order. The invocation will be offered by Rev. W. P. McCormick, of the Elmwood United Presbyterian Church, of Des Moines, Iowa. Let us all rise while Brother McCormick offers the invocation.

Rev. W. P. McCormick: Our Heavenly Father, we desire to bow before Thee this morning, acknowledging Thy sovereignty over us, knowing that in Thee we live and move and have our being, and that we are responsible to Thee and accountable to Thee, and that all we have is from Thee, and, truly, dear Lord, we can return thanks to Thee because Thou hast been good to us. We think of our misfortunes and difficulties and trials, and they seem dark to us, dear Lord, but it is only because we forget, perhaps, the misfortunes and trials and difficulties of others who are so infinitely worse off than we, and again we say, dear Lord, Thou hast been good to us, Thou hast opened up Thy hand and supplied our needs, and perhaps our difficulties come from the failure of men to co-operate, to think clearly, to act rightly, and it is with those things in mind that we ask Thy blessing upon us today, that these men gathered here today may act in accordance with Thy will, and some solution may be found for the great problems that confront them, and that they may be more largely blessed of Thee and more largely used for Thy glory. Bless the institutions of this land of which we are a part, and which we love—guarantees of our liberty. We pray we may continue to have that leadership of this land of ours that will emphasize these things and bring us larger inheritances of these things in the future. Bless us nationally, internationally, individually, that we may talk with Thee and find larger and larger expression of Thy purposes in our lives—we ask in Thy name. Amen.

The President: As you are all aware, this is a joint meeting with

the Co-operative Live Stock Shippers. We are certainly glad to welcome them with us, and at this time I am going to ask their president to stand up and be introduced to you. You men who do not know the president of the Federated Co-operative Shippers, I take pleasure in introducing to you, Martin E. Sar. (Applause.)

Gentlemen, I will now read my annual report.

ANNUAL ADDRESS OF A. SYKES, PRESIDENT.

Mr. President and Gentlemen of the Convention:

We wish to welcome you all to this annual gathering and hope that you will feel perfectly at home and endeavor to get the most possible out of the addresses and discussions as they are presented by the different speakers.

I feel that it is needless for me to state to this body of men that we, as farmers and stockmen, are passing through the most crucial period of our history. When we assembled here just one year ago in our annual meeting, we were suffering very severely from the financial blow that had struck us during the early fall of 1920. But all were hopeful at that time that something would be done speedily that would stop the ruinous downward trend of prices on grain and live stock, and that we would soon recover. But this was not the case, and in our sad disappointment we have witnessed the prices paid for our wares as agricultural producers cut in two in almost every instance during the past year, and as a result of this condition, five billion dollars have been taken from the purchasing power of the farmers and stockmen of this country, and today our government seems absolutely helpless to devise ways or means to increase the price of the products of the soil or to relieve the terrible burdens which are bearing down upon the producers of this country, and which, if allowed to continue, will in the near future create a rural peasantry in this country similar to that existing in most of the European nations.

In my judgment, there is but one logical way to relieve this distressed condition and revive business and start the wheels of commerce again moving, and that is to increase the purchasing power of the farmer by increasing the price of what he has to sell and reducing the price of what he must buy. It is a monstrosity and a horrible outrage upon the farmers of this nation for them to be forced to pay the outrageous prices for clothing, shoes, farm implements, harness and almost every article which they, of necessity, must have in order to continue their operations. At the prices which still prevail all over this country, something is radically wrong with our economic structure when it takes three times as many bushels of grain or twice as many pounds of live stock to purchase the same kind of article or the same kind of implement that it took prior to the war. Manufacturers, jobbers and retailers should blush with shame if they would stop to consider the distressed condition of agriculture and then remember the outrageous prices they are filching from the farmers for the very necessities which they must have in the conduct of their business.

I believe it noteworthy at this time to call attention to the fact that

upon most of the staple articles, such as coal, lumber, clothing, footwear, leather goods and many other articles which we must buy, there has been practically no reduction in price during the past year. It is rather difficult to determine just why this is, but everything that the people who handle these wares in their various capacities have such close working agreements and understandings that they are able, without much difficulty, to fix their own price and maintain it.

There has been one thing very noticeable and conspicuous for its absence during the past year, and that is any attacks by our big city dailies upon any of these profiteers, or in any way attacking the skyrocket prices still being collected for many of the necessities of life. This being true, we are led to inquire why this universal silence on the part of the great newspaper press of this country, as there is absolutely no other way to create public sentiment against these unjust and unreasonable conditions but through the daily press. We are wondering why the welfare of the masses should be so neglected by the spokesmen for the public.

The lawmaking body of the nation was in extraordinary session for about seven months. Many and varied were the schemes put forward for our financial relief and yet, in my judgment, nothing has as yet been evolved and put in tangible form that will anyway near meet the situation. From the huge appropriations made by congress it appears that our government has billions of dollars to spend for war, for armaments, for standing armies and for various other seemingly useless and needless projects, but it apparently has no funds which might be intelligently used to promote the welfare of the farmer by increasing the price of his products, and in this way help pull him out of the financial quagmire. If the half billion dollars appropriated by the last congress for a naval program had been used to buy our surplus corn and pork products, and furnished these to the starving millions of Europe, the prices of these products would have been substantially increased, the farmers greatly benefited, the starving people saved, and the whole world blessed and helped, and our taxes would not have been increased one penny.

Whereas, the money spent in the building of warships and armaments is worse than wasted, as it breeds war and bloodshed, and only tends to the destruction of both life and property, I believe the taxpayers of this nation should rise up as one man and speak out in a stentorian voice against the profligate waste of our public funds for the purpose of building naval armament, maintaining standing armies or subsidizing a merchant marine or shipping fleet. We have had enough of this during the past five years, and we should at once call a halt on this sort of work by congress.

In my criticism of the federal government for failing to do what I believe could and should have been done for the immediate relief of the distressed farmer and stockman, I do not wish to appear as being uncharitable or unmindful of the financial help the government has provided through the War Finance Corporation, and I am glad in this public way to commend our representatives in congress for passing this legislation. Sufficient funds are now available through this corporation to supply the needs of our farmers and stockmen for agricultural purposes, but I want

to emphasize this point, that borrowing more money will not lift us out of this financial quagmire, and until some plan is evolved that will provide a market for our products at a price that will give us cost of production, plus a reasonable profit, we can not hope to see any substantial improvement in conditions, and I still maintain that it is the duty of our government to see to it that such markets are provided for.

Digressing just a moment from the printed address, I just wish to say that personally I feel this way, men: It is all right for us to borrow money; it is all right for this government to provide money that may be made available to us as farmers and stockmen, to a certain extent, but we can never borrow ourselves out of debt. That money has got to be paid some time. You know that just as well as I do, and this thing of expecting that the producers of this country can pay these debts, whether we owe it to the government or whether we owe it to our bankers, under existing physical conditions is a physical impossibility. We never can do it as a people, and there is no use talking about it—we may prolong the agony and we may postpone the final day of reckoning, but we can not, unless there is something done to advance the price of the products of the soil and our live stock—I can not see how in the world we are ever going to meet these obligations in the future. I think this is a commendable act on the part of our government, furnishing this money, and I wouldn't wish to appear in any other light, so far as that is concerned, but it is not something that is going to relieve us unless along with that comes an increase in the prices of our products, so that we have some hope in the future of meeting these obligations when they shall become due.

Change in Federal Reserve Board

Many and bitter have been the criticisms of the Federal Reserve Board for bringing about this sudden and vicious deflation in prices, and at the same time advancing the rate of loans. No doubt much of this has been justified, and some has not, but there is no use crying over spilled milk or further abusing the Federal Reserve Board.

The thing that we must now see to as farmers and feeders is that the Federal Reserve act is amended by the present congress, so as to place upon that board the Secretary of Agriculture and a sufficient number of members who are practical farmers and thoroughly familiar with agricultural conditions to protect our interests and to see to it that agriculture and the tillers of the soil as well as Wall Street are consulted in the future in the working out of the plans and program of the Federal Reserve Board.

It is a lamentable fact that the board as now constituted is made up of men representing great banking and financial interests and that they are neither familiar nor in sympathy with agriculture and its needs, and it seems to us that the chief functions of the Federal Reserve Board have been to make money, and pile up millions in reserve in the east, and thus make money tighter and more difficult to obtain by the western farmer.

This then being true, let me urge you to set about at once in a determined manner to have this act properly amended, so as to protect your interests in the future.

Increased Consumption of Meat

There has been under consideration by the various interests handling live stock and meat for some time past, the working out of some sort of plan for putting on an educational campaign through the press and otherwise for the purpose of offsetting and counteracting the insidious propaganda that is being spread over this country to discourage the eating of meat.

The propaganda that was sent out by the food administration during the war to discourage our people from eating meat has cost our farmers and stockmen millions of dollars every year. Then aside from that, there is appearing daily in our daily papers and home journals, insidious advertising of the evil effects of meat on the system, and comparing the food value of a pound of meat with its cost to the food value and cost of numerous other articles of food. All such tends to discourage the consuming public from eating meat, and it appears that it is now our plain duty in order to protect the live stock industry to organize in some well defined manner and set about in a businesslike way to correct this wrong impression among consumers, and to show them in an intelligent way that meat is one of the cheapest, most wholesome and invigorating foods in the dietary, and in this way restore it to its original position as food on the tables of the consuming public.

A campaign to increase the consumption of meat will not only benefit the stockmen, but will automatically help the man who sells corn, for an increased consumption of meat means an increased demand for live stock, and this, in turn, means an increased demand for corn to fatten that live stock, so that all farmers are benefited in the end. Such a campaign as is contemplated will cost us some money, but I believe that under the plan outlined and prepared by a committee appointed at a conference held in Chicago, December 4, for the purpose of considering this matter, and which I will present to you, I believe the campaign can be promulgated and financed without becoming burdensome to any one; therefore, I want to recommend that you give this matter your very careful and serious consideration.

Plan

It is proposed:

"That a National Live Stock and Meat Board, consisting of seventeen members, each having one vote, shall be created to conduct and direct an adequate educational campaign counteracting the widespread and insidious propaganda against the food value of meat and disseminating through all possible avenues correct information about meat in the diet, with a view to increasing meat consumption, in co-operation with the United States Department of Agriculture and other appropriate agencies, and to take such other steps as may seem proper to create a wider market for and an increased consumption of live stock products.

"That the National Live Stock and Meat Board shall consist of eleven members representing live stock producers' associations; two members representing the Institute of American Meat Packers; two members representing the commission men, and two members representing the retailers of meat.

"That the producer members of the board shall be apportioned as follows:

Name of Organization	No. of Members in Board
American National Live Stock Association	2
National Swine Growers' Association.....	2
National Wool Growers' Association	1
American Farm Bureau Federation	2
Texas and Southwestern Cattle Raisers' Association	1
National Society of Record Associations.....	1
Corn Belt Meat Producers' Association.....	1
Kansas Live Stock Association.....	1

"That the producer members of the board representing a given association shall be appointed annually by that association.

"That the National Live Stock and Meat Board at its initial meeting shall create a central working executive committee, which shall be composed of four representatives of the producers, one representative of the retailers, one representative of the packers, and one representative of the commission men. And further, that each member of this executive committee shall have one vote, thus giving to the producers four votes; to the packers, one vote; to the commission men, one vote; to the retailers, one vote. Each of these four groups, by its representative on the board, shall select annually its representative on the executive committee.

"That while the National Live Stock and Meat Board shall be the policy making body, the executive committee shall be empowered to carry out the policies decided on, with authority to rent offices, to engage the services of a capable managing director with such assistants and facilities as he may need.

"That this managing director and his assistants shall be the only person connected with the whole movement who shall receive remuneration for his services, except that members of the National Live Stock and Meat Board and members of its executive committee shall receive their traveling expenses to and from meetings of the board or of the committee.

"That the executive committee shall render an account of its work and disbursements annually to the National Live Stock and Meat Board, or oftener if requested by the board, and that the members of the executive committee shall be elected annually after their first election by the board.

"That the executive committee as soon as possible after election shall engage the managing director, establish quarters and proceed actively to carry out the purposes for which the National Live Stock and Meat Board is organized.

"That the funds for financing this movement be raised by the collection of 5 cents from the shipper on each car of live stock (or at that rate on less than carload lots) and an equal amount from the buyer.

"That the officials of the National Live Stock and Meat Board be a chairman, a vice-chairman, a secretary and a treasurer, chosen by the board from its members.

"Respectfully submitted,

"E. L. BURKE, Chairman.

"W. J. CARMICHAEL.

"A. SYKES.

"A. C. WILLIAMS.

"F. EDSON WHITE.

"THOMAS E. WILSON."

Digressing again from this printed report, I wish to say that this is a matter that has been up for consideration during the past year. A number of conferences have been held on this question. There has been some difference of opinion among the representatives of the live stock interests as to the advisability of this movement. Some had objected to it on account of the fact that they felt we might in some way get tied up too closely with the packers, and that the packers would dominate this whole thing. Of course, that is one thing that we have tried to guard against in the formation of this national board, as you will recognize right to start with. The producers have eleven men on that board, and on the executive committee they have four men and the packers have one, so that we think that the producers' interests are fully protected under this plan as worked out by this committee.

Now, you may think it strange why I am presenting this matter to this convention in this way, but you understand that I didn't bind this organization by signing this report or plan as president of this organization. Not by any means! That is very clearly understood! This plan is to be presented to the various stock organizations in their annual meetings, and, fortunately, we happen to be the first organization holding its annual meeting after this plan was worked out and submitted by this committee on the 4th of December, last, and that is the reason that I am presenting it to you here today, not only as members of the Corn Belt Meat Producers' Association, but as live stock men representing the Cooperative Shippers, because it is a problem that we all are vitally interested in. If you don't want these organizations to cooperate in a movement of this kind, that is up to the convention, of course, to say so when the proper time comes, and that is the reason that I have incorporated this whole plan in my address in this way, so that you may have it before you and note what the thought is, just what it contains, what the idea is, and everything and all about it. The packers are paying the same price that we are—that is, they pay 5 cents a car. They entered into an agreement to pay 5 cents a car for all of the stuff that they buy. Five cents a car is taken out of our shipments as the producers when we ship it to the markets, and in this way it is proposed that this fund shall be secured to finance this campaign of advertising to increase the consumption of meat.

At the time of your last annual meeting, there were a number of important matters pending, among which was the appointment of a live stock marketing committee by President Howard of the American Farm Bureau, the hearings on a complaint asking for lower freight rates on live stock,

filed by your association and others, the working out of a more orderly plan for the marketing of your live stock, and various bills pending in congress. These matters were all taken up by your officers as the work progressed and their best efforts put forth to protect your interests.

Freight Rates

The first hearing on the complaint asking for a reduction in interstate rates on live stock was held at Denver the fore part of June, and lasted for some three days. At this hearing, you were represented by Judge Henderson, commerce counsel of Iowa, and myself. Here, the western range men and producers presented their case, and the hearing was then adjourned to Chicago, where the Corn Belt feeders were heard, your organization being represented by your president and secretary, and Judge Henderson.

At this hearing a mass of undisputed evidence was submitted by different feeders and by a large number of statements secured from representative feeders over the state, showing the terrible losses sustained by the stockmen and the deplorable conditions of the industry as a whole. The taking of testimony was conducted at the Chicago hearing, and the case was argued before the commission in Washington in July, and all felt that the live stock interests had made a very strong case, and confidently looked forward to a favorable decision which would give to all a material reduction in rates.

In this, however, we, in the corn belt sections, were doomed to disappointment, as reductions in rates were only granted where the rate to a certain market exceeded 50 cents per hundred. We next tried to secure reductions through a conference with the railroad officials, and in this we were also unsuccessful, and the final move that was made was to secure the reopening of the case. It was reargued on November 8, and at this writing no supplemental decision has been rendered by the commission.

I did not feel that I was justified in taking up so much space to go into this case as fully as I should have gone into it in my printed address, so that I will just give you a little more information on this case than is brought out here in this report.

This hearing was held before an examiner for the Interstate Commerce Commission. After the examiner had gotten all of his facts together and analyzed the whole situation, he came out in an open statement to the effect that the live stock industry was in a deplorable condition—there was no question about that; that while the earnings of the railroads might not justify a reduction at this time in these rates, he said the condition of the live stock industry absolutely demanded it and justified a reduction in rates, and just as much as said that a substantial reduction in rates should be made. Of course, after this statement went out to the public through the press, why, we felt confident that a substantial reduction in rates would be made by the commission, because we didn't believe that the commission would permit a representative of that body to make such a public statement through the press, as he made, if the commission had not practically O. K'd that statement before it went to the press; but when the decision came out, we found that it simply said they would recommend to the various railroads that they make a reduction in rates of

20 per cent where they exceeded 50 cents a hundred, and no reduction in rates where the rates didn't exceed 50 cents per hundred. Now, just what changed the minds of the commission after this first statement was issued by the examiner who heard this case, and who was in full sympathy with it, and still stands by his guns?

Then we went to the railroad officials, and as I referred to here, a conference was called and this whole matter was laid before them, with the hope that we would yet secure in the corn-belt territory at least some reduction—if not the full 20 per cent that we contended for, they would at least give us some reduction in rates; but they refused to do it. Then we again appealed to the Interstate Commerce Commission for a reopening of the case on the grounds of discrimination against this section of the United States, and the case was argued on that ground on the 8th day of November, I believe, and up to the present there has been no supplemental decision rendered in the case.

That is the situation that we are confronted with. We can not account for it. Nobody can account for why it was that there wasn't a reduction in our rates, because when the advances were made they were uniform advances of 35 per cent. The advance was made upon the live stock shippers here in Iowa just the same as it was made on the people west of the Missouri river, but when the reductions came, there was a reduction for the shippers west of the Missouri river—that is, after you get out about 100 miles, but no reduction east of that to the Chicago market.

Minimum on Hogs in Iowa

In the meantime, the railroads had appealed from an order of the Iowa commission restoring the sixteen thousand pound minimum on cars of hogs shipped to points within the state, and the case was heard by the Iowa Board of Railroad Commissioners in January. In this case, your organization was represented by Judge Henderson and your president, and a number of witnesses representing both the Corn Belt and the Cooperative Shippers, who gave valuable testimony in the case.

In due time the commission handed down its decision again establishing the sixteen thousand pound minimum as the standard on hogs within the state.

From this decision, the carriers appealed to the Interstate Commerce Commission on the grounds of discrimination against interstate traffic, and this case was heard by an examiner for the commission in Des Moines on October 30, and no decision in the case has yet been announced by that body.

Just a little explanation concerning the minimum weights on hogs to points within the state. In 1912, this organization conducted one of the most exhaustive hearings ever held before the Iowa commission, which lasted an entire week, and that question involved only state rates, and when the decision was rendered by the Iowa commission it established a 16,000-pound car as the standard weight on cars of hogs shipped to points within the state. That minimum prevailed up until about the close of the war, when the regional director of railroads decided that these minimums should be uniform. Iowa had a 17,000-pound minimum on interstate business, and the railroad administration, by order, advanced the mini-

mums within the state to 17,000 pounds. After the roads were turned back to the different companies, Iowa restored its old order fixing a 16,000-pound minimum within the state, and the railroads appealed from that order. That is what brought on the first hearing that I refer to, in January, and which resulted in the commission again re-establishing and confirming the old decision of the 16,000-pound minimum, and then the carriers came back after that decision was rendered and appealed from the decision to the Interstate Commerce Commission, on the grounds of discrimination against interstate business. Of course, you know under the 1920 transportation act, it seems as though the state commissions have no standing whatever, that they are merely figureheads. Now, of course, this is one of the cases that is going to try that question out, as to whether or not the Interstate Commerce Commission is going to go over the heads of our state commissions and set aside their order and make an order restoring or establishing the 17,000-pound minimum on intrastate business.

Packer and Stock Yards Legislation

I feel that your organization is to be congratulated on the splendid work it has done in assisting in securing the final enactment during the extra session of congress of the packers and stock yards bill, which places the meat packers, the stock yards, the commission men and traders under the supervision of the Secretary of Agriculture.

This, as you well know, has been a long and bitter fight, but this organization has earnestly and steadfastly contended for the enactment of such legislation for years past, and we hope now that all the various interests concerned in the production, selling or slaughtering of meat animals will in the future co-operate and work more harmoniously together for the best interests of the industry as a whole.

In this connection, I feel that I would be derelict of my duty if I failed to make special mention of Senator Kenyon, of Iowa, and Kendrick, of Wyoming. These men certainly deserve the deepest appreciation and gratitude from the stock men of the country for the splendid, courageous fight which they waged for years to secure this legislation, and I would suggest that a suitable resolution making mention of this fact be prepared by the committee on resolutions.

Marketing Committee

As you are aware, your president was appointed a member of the Farmers' Live Stock Marketing Committee of Fifteen; this committee being created to make a study of general live stock marketing conditions and to work out a general plan for the more orderly marketing of live stock. This, as you doubtless realize, was a long and tedious job, as the committee held some eight or nine different sessions and spent weeks and months making the most diligent and careful study of the entire situation.

Your representative on the committee was made chairman of the subcommittee on orderly marketing. This committee organized at once and prepared to make a complete survey and digest of the movement of live stock to all of the larger terminal markets. This we found to be a tremendous task, but it was carried through to by far the greatest degree of anything of the kind that had ever been undertaken in regard to the move-

ment of live stock. After this had been done and the movement of live stock had been charted with colored charts so that any one could see just what was happening and how the ups and down in receipts affected the price of our live stock, the sub-committee set about to work out plans that would, if possible, more evenly distribute the supply over the daily and weekly periods.

After these plans were worked out on the various kinds and classes of live stock and put in proper form and presented to the committee of the whole, it was found that it would be most difficult to harmonize and dovetail them into the plans of the sub-committee on co-operative marketing. Then, too, we also found when we presented our plans to representatives of the live stock exchange, that we could not secure their endorsement and co-operation in putting them into actual working operation. But this, I think, was largely due to the fact that the Committee of Fifteen was planning for the establishment of co-operative selling agencies at the different terminal markets.

After the various obstacles in the way of putting the plan over, as worked out, were encountered and it was found impracticable to attempt it at this time, the sub-committee found it necessary to very materially modify and change its original plans so they would harmonize and work into the general plans for the co-operative marketing of live stock.

As time and space will not permit me to go into these as finally adopted, I will refer you to the printed report of the Farmers' Live Stock Marketing Committee of Fifteen which was adopted by the live stock conference at Chicago on November 11.

In this connection, I wish to state that I believe that everything indicates that the time has come when we, as producers, must prepare on a large scale to market our live stock by the co-operative route. The idea that live stock producers can not organize co-operative selling agencies that can successfully compete with the old line commission men is all tommy-rot and should be relegated to the archives of the past ages. The stock men can not only save from forty to fifty per cent in commission charges, but under the general plan adopted at the recent live stock conference, the most logical and surest way to bring about a more orderly flow of our live stock to market is through our own co-operative marketing agencies. This, then, being true, we should urge the early establishment of a good, strong co-operative commission company at the Chicago market, and when this is done, every live stock producer and shipper should get solidly back of the movement and see to it that it is a success from the very beginning. The time is fully ripe for the live stock producers to enter this field and demonstrate the fact that they can market their live stock through their own representatives to a material advantage to themselves.

1920 Transportation Act

Everybody except the men who control the railroads is agreed that rates must come down, and yet there are no material reductions, and why? Simply because the 1920 transportation act, known as the Esch-Cummins bill, prevents the Interstate Commerce Commission from reducing rates under the present railroad earnings.

I doubt whether there has been a more vicious piece of legislation en-

acted against the agricultural and live stock interests than that portion of this bill which requires the commission to fix a valuation upon the railroads of this country, and when that is done, makes it the duty of the commission to fix rates and charges high enough so that the carriers will earn five and one-half per cent on the fixed valuation.

As is a well-known fact, the total value of eighteen billion five hundred million dollars was fixed by the commission when everything was at the very zenith of inflation, and the railroads are now trying to pay dividends on from three to four billion dollars worth of fictitious value that never existed.

And now when we try to secure a reduction in rates we find the railroads claiming that they are not earning the amount guaranteed them under the act, and we also find that the commission cannot order the rates reduced because the roads claim they are not earning the five and one-half per cent allowed them under the provisions of the bill. And so it is the dear public goes on paying these exorbitant rates with little or no hope of relief through congressional action in the way of amending this law and eliminating the pernicious features which make it so distasteful to the shippers of the country.

In this connection, I would like to say for the benefit of the convention that if the valuations of these railroads had been fixed where they properly belonged, we wouldn't have such serious objection to the guarantee feature of that law; but, to my mind, there was the first great mistake that was made. If there had been something, some provision in that bill which would have limited the valuations which might have been placed upon these railroads, then it would have been an entirely different situation, but the trouble was the commission had no time to prepare this valuation. Why, the Interstate Commerce Commission has been working for years trying to secure a valuation of the railroads of this country, and the facts are that the last information I had, they had only succeeded in placing the value on one of our big railroads. Now, this work had to be done inside of six months after the bill was passed. The commission had no time to work out and place a proper valuation on these railroads, and how was it placed? Just simply like we place valuations on real estate. We go out and look over a farm and say that farm is worth so much money. Normally, that was a reasonable valuation, and so was this when prices were at their peak. And so they held a conference and the railroads contended for a twenty billion dollar valuation, and brought every pressure to bear to force the commission to place that valuation on our American railroads. Then here were the producers standing and fighting for a seventeen billion dollar valuation, and under existing conditions it should have been fifteen billions—but at that time nobody expected such a deflation of values as immediately took place, and so the commission finally settled on \$18,500,000,000, I think, or approximately that amount, and then fixed the rates as they thought they would earn the 5½ per cent on that valuation.

Well, now, we have got just what we have got in agriculture and every place else, as a result. We have got deflation, and these properties today wouldn't sell within five billion dollars of the value that was placed on

them by the Interstate Commerce Commission at that time if they were thrown on the market, and yet we have got a condition which requires the commission to fix these rates high enough to earn a dividend of 5½ per cent on the fixed valuation.

It is also interesting to note the attitude of the railroad employes in regard to a reduction in wages. Just as soon as a reduction is announced, the organization spokesmen jump out and threaten a strike, so it is that they hold the strike club over the shipping public continually; apparently not caring whether or not the farmer receives anything for the long hours of toil in producing his crops. It has been proven conclusively that the farmer received from ten to twenty-five cents per hour for the time spent in producing and harvesting his crop, while the railroad laborer received from sixty cents to one dollar per hour and time and one-half for overtime in the performance of his task.

Railroad and all other classes of labor must be reduced in price, and the sooner the laboring people realize this and accept it the sooner will business of all kinds become readjusted and revived, and all will be benefited in the end.

Likewise, freight rates and many other commodities must be reduced materially, in line with the deflation in prices of farm products and live stock, as it is grossly unfair and unjust to expect that agriculture must stand all the deflation in this reconstruction period, and if the present management of the railroads can not make them pay under greatly reduced rates, they must be turned over to men like Henry Ford, who will increase their efficiency and cut the rates in two and still make them pay.

Now, it seems to me that the duty of the live stock producers of this country, along with the farmers as a whole, is to see that the present session of congress amends this bill so as to give us some protection. I believe that the commission actually wants it done. They realize the situation. The only reason we didn't secure a 20 per cent reduction in rates on live stock in this case that I have been talking to you about was simply because the commission hadn't the power to do it. That's all there is to it! While that law stands in that form, the commission is practically helpless to reduce rates, unless the railroads voluntarily do it. That is what they did in the 20 per cent reduction on the rates that exceeded 50 per cent. The commission never ordered a reduction of those rates—they recommended a reduction, and the railroads made a reduction in accordance with that recommendation, but they were not made pursuant to an order by the commission, as was commonly done prior to the passage of this bill.

Taxes

Equal in importance to the transportation question is the question of taxes. These have increased by leaps and bounds during the past few years. County, municipal, state and federal taxes are now so high that it means almost confiscation of our property in many instances.

Taxes on farm lands range from one to three dollars per acre, which represents one-third or more of the rental income, and farmers everywhere are finding it most difficult to scrape up money enough to pay them. Never before in the history of our state has there been any approach to

the amount of delinquent taxes and the property advertised at tax sales. This is, indeed, a most serious and alarming condition, and a sad commentary on our boasted civilization and business efficiency.

We cannot permit this condition to continue. Taxes must be reduced. This orgy of the reckless spending of the people's money by public officials must be stopped, and a sane and economic system of conducting the public business be inaugurated. Under force of the most dire necessity, farmers are compelled to economize and deny themselves of many of the comforts of life, in order to be able to meet their taxes, while there is apparently no economy or reduction in public expenses on the part of the men who dispense our public funds.

The farmers and stock men should unite their forces and stand solidly together for a material reduction in their taxes, as they can not exist and retain their homes if this condition continues; and I hope that a strong resolution setting forth the farmers' position on this question will be adopted by this convention.

I just want to say that after writing and preparing this portion of my address, I made a little investigation concerning the taxes on land within the state which I should have made before. I say in this address that the taxes range from \$1 to \$3 per acre, and I find that I was \$1.50 too low—that they range from \$1 to \$4.50 per acre right here in the state of Iowa at the present time. There are places in the state of Iowa where men are actually paying \$4.50 an acre taxes on their land. And how in the world, men, are we going to endure and continue under those conditions? I tell you, this is a serious thing; it is a thing that this convention should give the most serious consideration to, because we as farmers and producers cannot stand this sort of thing, if it is going to continue, and pay these taxes with 30-cent corn or 5-cent hogs or 4-cent hogs which we might have we don't know, of course, we hope not, but we have had 4-cent hogs in the past and might again.

Mr. Ames: May I ask a question, Mr. Sykes? Can you tell us what part of the state is paying those high taxes? That is, what section, what township or county?

Mr. Sykes: There are some portions of Cherokee county where I found this to be true, and right in my own county there was one township where the township tax was \$4.21 an acre.

Mr. Ames: Is that a school district?

Mr. Sykes: Yes, a consolidated school district.

Mr. Ames: It is a local tax?

Mr. Sykes: Yes.

Mr. Ames: It is self-imposed?

Mr. Sykes: Yes.

Member: That doesn't include any paving?

Mr. Sykes: Oh, no, that doesn't include paving tax at all. That is the tax that is levied by the county and the state.

Association Matters

Concerning the work of your association, and membership campaign during the past year, will say that on account of the very stringent money situation and the discouraged and disheartened conditions of the farmers and stock men, it was not deemed advisable to push this feature of the work during the past year and we are unable to report a large increase in our membership. Nevertheless, we are gratified for the way our membership has held up and the dues have been paid, and in another year, it will be necessary to put on an intensive membership campaign and build up our ranks.

Regarding the statistical work which was being carried on at Chicago by Mr. Harlan, will say that March 1, the Iowa Farm Bureau withdrew its support to that work and your organization continued it up to October 15, when Mr. Harlan was employed by the United States Bureau of Markets and Crop Estimates and the work which he has been doing at the Chicago market will be continued and enlarged upon, under his supervision.

This work is without doubt the most valuable to the cattle feeders of anything of the kind undertaken and your organization is to be congratulated on the fact that we have been able to interest the United States Bureau of Markets and Crop Estimates in this important work, as under that bureau the work can be extended and enlarged upon to a much greater extent than could be done by your organization. And in this connection, I wish to say that doubtless the interest that has been aroused at Washington in this work on behalf of the live stock interests is largely due to the presence there of your former long-time secretary, Hon. Henry C. Wallace, who is now Secretary of Agriculture.

Many other matters of interest and importance to the membership and to live stock producers have been taken up during the year your officers have been called upon continuously to attend meetings and conferences to discuss vital problems affecting your interests. Never in my experience as president of your association, have I given as much time and diligent study to these various problems as during the past year and yet it seems in a way, that but very little has been accomplished. This distressing period which we have been passing through as a result of the World war and the vicious price deflation drives that were made from time to time by the moneyed interests of this country, fell largely upon the agricultural producers because they were not closely enough organized to resist the attacks and hold up the price of their wares as was those who produce manufactured goods, lumber, coal and other staple articles. Could the farmer of this country have resisted price deflation on their products as effectively as have union labor and those who traffic in most of the other commodities and necessities, the farmer today would be in a vastly different condition financially and would not be on the verge of bankruptcy as a whole, and on account of this condition it is most difficult to bring about substantial relief to agriculture quickly. But we believe that conditions are more hopeful and if we can succeed in bringing about further deflation on many of the articles we must buy, which are entirely out of line with the price of your products, and at the same time could advance to some extent the prices of the products of the farm and ranch so as to

again bring these things into a proper ratio or parity with each other as in the past, the farmer will work out of this dilemma and will soon be on the way to recovery.

Two things I feel are necessary just now in order to win and that is courage and optimism. We must keep up our courage and stay by the old ship and we will finally win out.

To all who in any way have contributed to the success of this organization during the past year, we wish in this public way to thank you and to express our appreciation of your helpfulness.

And now, let us all thank God and take courage and take hold of the tasks that lie before us as stalwart men and help balance up this old world again and bring about normal and healthy conditions.

I thank you. (Applause.)

The President: I would like to call on Mr. Sar at this time for a few remarks as president of the Co-operative Shippers.

Martin E. Sar, President Iowa Federated Shippers: Mr. President and Members: I haven't prepared any address to submit to this convention. Our Secretary, of course, has been doing practically all of the work for the Co-operative Shippers and has a special written report which he will make at our Co-operative Shippers' session.

Probably a good many of the men here are large feeders and carload shippers and haven't become affiliated with co-operative shipping associations; but it is a new movement, somewhat, here in Iowa. However, in Minnesota and other sections of the country, it is a movement which has been going on for twenty years or more and is a dominant factor in the live stock marketing, and in Iowa at the present time it is growing at a tremendous rate, and we hope, as the Committee of Fifteen states in their report, that ultimately the co-operative shipping association will be made so efficient that all live stock will be marketed thru that channel. Certain concessions, of course, will have to be made to carload shippers, because they feel that the rate which it is necessary to make will have to be made low enough so that they can get returns for that.

To carry out any large program of marketing, you must have some local organization thru which it should pass, only in a nominal way, so that there may be some record when it leaves the point of origin, which can be collected at the central point, either in the state or at the central markets, or in some manner of that sort.

I don't know that I have anything further to say, only we would like to announce our resolutions committee, so that our members and others, if they have resolutions which they wish to present, may

present them to the committee for consideration before making report to the convention. As I understand it, they will probably be presented to both organizations, so that they can act on them in case they do not conflict. As chairman of the resolutions committee, we have appointed: Earl Elijah, Clarence; O. J. Kalsen, Huxley; J. E. Jensen, Buffalo Center. Your resolutions may be handed in to our secretary, Mr. Espe, or to any of these men, and they will be acted upon. Our credentials committee will be appointed later.

The President: This completes our program for the morning. If there is nothing further, we will stand adjourned until 1:30.

AFTERNOON SESSION.

The President: Gentlemen, the time is now past when we should open our convention. Without taking up further time in preliminaries, I am going to announce at this time the resolutions committee of the Corn Belt Meat Producers' Association, as follows: R. M. Gunn, chairman, Buckingham; Ralph Sherman, Grinnell; E. G. Nourse, Ames; J. A. White, South Amana; W. P. Dawson, Aurelia; Joe Thompson, Jefferson; Fred Larrabee, Fort Dodge; Warren Nichols, Minerva; Dave McLaughlin, Washington; H. S. Bumgarden, Rock Rapids.

Turning now to our program, the first speaker will be Prof. Culbertson, of Ames.

NEW FEEDING WRINKLES

By C. C. Culbertson.

Mr. President, Members of the Corn Belt Meat Producers' Association: This is the second time I have been with you in the past two years, acting as a substitute for Professor Evvard. I am glad to be here, but am sorry that I have to substitute for him. However, ill-health has kept him away this time. He had expected to be with you until two weeks ago, when he found he had to make another trip to Iowa City and Chicago to see his doctors. I am sorry to say that there is a probability that he will have to go to the southwest or west for a year for his health.

I want to talk to you a little while today on the same subject that was chosen by Professor Evvard, namely, "New Feeding Wrinkles." First, I want to tell you about the work carried on at the Iowa experiment station during the past two years with cattle, sheep and swine. During the past two years our work with cattle has been mostly with molasses—experimenting with the different amounts of molasses for fattening beef cattle. We have fed both cane and beet molasses in two different years, feeding these two products in different amounts, namely, one, three and five pounds, or two and full-fed per steer.

What is molasses? Is it a supplement or carbohydrate? Some people have the mistaken idea that it is a supplement to take the place of the linseed oil meal or cottonseed meal. However, molasses is similar to corn. Molasses runs about 25 per cent moisture, while corn runs around 15 per cent, otherwise there is a great deal of similarity between the two. Both years we have added this molasses to our standard corn belt ration—a very practical ration which has stood at the top or close to the top in our feeding trials. This so-called standard corn-belt ration consists of shelled corn (hand full-fed), three pounds of linseed oil meal per steer per day, corn silage (hand full-fed), and clover or alfalfa hay at night. Both years the addition of molasses had very little effect on the gains. The steers have gained about equally in all lots. However, both years the molasses increased in the cost of gains from 25 cents per hundred when five pounds of beet molasses were fed, to \$1.53 per hundred when five pounds of cane molasses were fed. The second year's work showed the cost of 100 pounds gain to be 50 cents more where two pounds of molasses were fed, and \$2 more when the molasses was full-fed. There is an old saying that molasses stimulates water drinking and consequently increases the gain—but does it? We kept a water record on these steers both years and found that there was very little difference in the amount of water they consumed. For every pound of molasses eaten, the excess consumption of water over and above the check lot was as follows: Where one pound of cane molasses was fed, the water consumption was increased 1.7 pounds per day; where three pounds were fed it increased only one pound per day, and where five pounds were fed, the water consumption was only increased two-tenths of a pound per day. That is for cane molasses. The larger the allowance of molasses the less extra water was drunk. In the case of beet molasses, the opposite condition prevailed—that is, the larger the allowance of molasses the more water they drank—1.39 pounds where five pounds of beet molasses were fed.

We noticed, especially last year in the heavy-fed molasses lots, that there was apparently a great deal of fermentation took place. The steers would belch. Whether this has much effect or not, we do not know, but there probably would be some loss of gases, etc.

We were very much interested to know what we could afford to pay for both cane and beet molasses when fed in different amounts. We found where five pounds of beet molasses were fed against, you could afford to pay \$28.19 per ton for the molasses and still return the same margin per steer as in the standard group. Where we fed one pound, you could afford to pay \$105 per ton. So that where you fed large quantities there was a loss, and where you fed very small amounts it paid to feed it. Cane molasses showed relatively the same values.

Last year, when corn was cheaper and molasses went down only \$5 a ton, it was worth \$35 as compared with \$40 the year before, and you could afford to pay only \$4.80 where five pounds were fed, as compared with \$36.50 where two pounds were fed. Generally speaking, then, we have found that cane and beet molasses are about equal for producing gains on cattle, but in Iowa under normal conditions it doesn't pay to feed either one, except perhaps in very small amounts, unless you can buy it pound

for pound as cheaply as you do corn. This year when your corn is cheap, you cannot afford to pay as much for molasses as you could two years ago, or even a year ago.

This year, Professor Evvard went to Kansas City about the middle of October and bought 68 Shorthorn steers that cost \$5.25 in Kansas City. We ran these steers on pasture until last Saturday, when we divided them and started them on test. After meeting with the directors of your association, we decided to run a test this year on roughages for fattening two-year-old steers. Our check lot receives the standard corn-belt ration, namely, shelled corn (hand full-fed), three pounds of cottonseed meal per steer per day, corn silage (hand full-fed), and alfalfa and clover hay, self-fed. The second lot gets corn (full-fed), two pounds of cottonseed meal per steer per day, and alfalfa hay, self-fed; the third lot gets the same as the second, except that clover hay is substituted for alfalfa, and the fourth lot gets the same as the second except that mixed hay (half timothy and half clover) is substituted for alfalfa. Another lot gets the same ration, except that timothy hay is substituted for the alfalfa. This lot also gets oat straw, self-fed. We are putting in another lot that gets all of the silage they will eat and three pounds of cottonseed meal and alfalfa hay, self-fed. Still another lot receives shelled corn (hand full-fed) and corn fodder (self-fed) and three pounds of cottonseed meal.

We expect to have a Cattle Feeders' Day at Ames some time in April and will hope to see you all there. In fact, we will expect to see you all there at that time.

We are asked a good many times, What is silage worth as a roughage for cattle? From the work done at the Iowa station in the past, it is estimated to be worth about two-fifths as much as clover hay. For feeding lambs, silage is worth a little more. Purdue has found, I believe, that it is worth around one-half as much as hay for fattening lambs. Last year we also did some work with molasses for fattening lambs. We bought some 300 fifty-pound lambs in Omaha and started to feed them along in December, and fed them for 85 days. Cane and beet molasses were fed at the rate of one-quarter pound to one-half pound, and full-fed. Where we full-fed molasses, they ate about seven-tenths of a pound. The molasses lot was checked against a ration that we have used with considerable success for the past seven or eight years, namely, shelled corn (hand full-fed twice daily), corn silage (hand full-fed twice daily), and hay at night. Last year we used clover hay during the first part of the test and had to change to alfalfa the last forty days. For lambs, the molasses did increase the gain. In Lot 1, where no molasses was fed, the average daily gain was .29 of a pound, while the best molasses lot was 1.30 pounds. This happened to be in the lot that was fed a half-pound of beet molasses. However, the molasses increased the cost of gain enough so that the check lot made more money per lamb than any of the molasses lots. The check lot made 11 cents per lamb, and the other lots all lost money. The check lot sold higher at Chicago than any of the molasses lots except one. The main reason was not that they were particularly finished better, but that there was so much molasses in the fleeces of the lambs. When based on final selling price, the molasses was worth, to return same margin per

lamb as the check lot, from \$25 in the best molasses lots to \$8 in the poorest. That was when corn was worth 52 cents per bushel and molasses \$35 per ton.

We have also done some work in fattening lambs with different grains, using corn, oats, barley, a mixture of corn and oats, and a mixture of corn and barley. The first thirty days in the mixed lots we fed two parts oats or barley and one part corn, and the next thirty days we used half and half, and the last thirty days we fed two parts corn and one part of oats or barley. Shelled corn was the most satisfactory grain fed, judging from the physiological and financial standpoint. The oats-fed lambs made the poorest showing of all groups fed. Apparently, a mixture of corn and barley is not a success, as the group receiving this mixture did not do as well as where barley was fed alone. Figuring corn worth 100 per cent in this test, oats were worth about 77 per cent as much, and barley 91 per cent as much. Where we mixed oats and corn, oats were worth 90 per cent as much. The barley when fed in the mixture was worth only 70 per cent as much as when fed alone. This again brings out the fact that in feeding lambs for market, it pays to stick to corn, properly supplemented. Some years it may pay to feed a substitute, but in general it does not.

During the past two years we have been asked to do a great deal of work with soy beans planted in the corn for hogging down purposes and as hay for sheep and ewes. We have wanted to do more work with soy beans than we have been able to do. Unfortunately, we have been short on ground, hence could not do any work with soy beans planted in the corn for hogging down purposes. We have, however, done a little work with soy bean hay for ewes. In this test we carried four lots of ten ewes from breeding time until they brought forth lambs. All ewes were fed shelled corn sufficient in the respective groups so that they would gain approximately the same. Other than this, their rations were as follows:

Lot 1—Corn silage, alfalfa hay and salt.

Lot 2—Corn silage alfalfa hay, soy bean hay and salt. One-third as much soy bean hay as alfalfa was given.

Lot 3—Corn silage, alfalfa hay, soy bean hay and salt. As much soy bean hay as alfalfa was given.

Lot 4—Corn silage, soy bean hay and salt.

Results showed that alfalfa and soy bean hay may be fed very well together.

In Lot 3, each 100 pounds of soy bean hay equaled 90 pounds of alfalfa and 15 pounds of corn grain.

In Lot 4, each 100 pounds of soy bean hay equaled 104 pounds of alfalfa plus 10 pounds of corn grain.

These results show up very well for a good soy bean hay, fairly well podded and seeded.

In the winter of 1919, we had forty ewes which we fed different amounts of salt. Our check lot received a grain mixture of 50 parts barley, 20 parts corn, 20 parts bran, and 10 parts linseed oil meal, three pounds of corn silage in the morning and one pound of alfalfa hay at night. Lot 1 received no salt; Lot 2 received one-fourth ounce of flake salt per ewe per day; Lot 3 received one-half ounce a day, and Lot 4 received one ounce per

ewe per day. The lots receiving a quarter and a half ounce made better gains than the lot that got an ounce of salt. Apparently, an ounce of salt per day was too much. The lambs in the lots receiving the quarter and half ounce of salt per day were stronger and better covered with wool and in better condition than those in the lot where no salt was fed, or where one ounce was fed. Apparently, a quarter of an ounce of salt a day is about right for ewes.

The other day I picked up a farm paper and saw this heading: "From the practical standpoint, pure-bred live stock are better than scrubs, and the scrub sire should be eliminated." That theory is very well illustrated by an experiment we have made with a wild boar which we have at the station. Perhaps a number of you have been up there and seen this wild boar. Pigs sired by this wild boar and out of a Poland China sow took from late April to the 17th day of February to gain 150 pounds. This was in dry lot. They were fed a ration of shelled corn (self-fed) plus a mixture (self-fed) made up of 60 per cent protein tankage, 50 parts; ground alfalfa, 25 parts, and corn oil cake meal, 25 parts, plus block salt, self-fed.

This year we took this same sow and bred her to a pure-bred Poland China boar, and her pigs reached an average of 150 pounds on November 11, thus making a saving of three months in getting the pigs to an average weight of 150 pounds. The pigs from the pure-bred sire made the same gains on 82 pounds less of corn per 100 pounds of gain, which means that in dollars and cents, at the present prices, you would save about 58 cents per hundred pounds between the two, plus three months' labor and time.

Speaking about soy beans, we have also done some work with soy beans for fattening swine in the dry lot. A year ago last fall we started a test where we carried three lots of fall pigs from an average of 50 pounds in weight to an average of 225 pounds. The check lot was fed shelled corn (self-fed) plus digester tankage (self-fed), plus block salt (self-fed). In the second lot, we fed natural soy bean meal (self-fed) in place of the tankage—that is, soy beans that had been hulled and ground; and in another lot we fed fat-extracted soy bean meal in place of the tankage. The natural soy bean meal ran about 33 per cent oil, while with the fat extracted it ran about 8 per cent oil. When tankage was worth \$100 a ton, as it was last year, the value of the natural soy bean meal to produce the same margin per pig as the check lot, was worth \$35 a ton; the fat-extracted meal was worth \$48 per ton.

As a swine feed, results were better when the oil was extracted. It is cheaper to produce fat with corn than by the use of the oil in soy beans. In the same test we had a lot that received vegetable hog ash, which is a product put out in Omaha, I believe. It is simply manure that is taken and burned in an incinerator and then reground and sold, and, according to the manufacturer, contains potassium, some sulphur, a little iron phosphates, magnesia and silicon. We fed this the way the company advised feeding it, namely, in a mixture of tankage 50 parts and hog ash 50 parts. They advised us that a number of farmers were feeding this product and getting very good results. This hog ash cost \$20 per ton, and when fed to make the same cost of gain as the check lot was worth minus \$282 per ton. (Laughter.) In other words, they would have to pay us \$282 per ton to feed it. (Laughter.)

The past summer we have been doing some work with mineral mixtures. On our annual Swine Feeders' Day, November 15, we gave out figures covering the first 100 days of one test and 140 days of a second. Previous to this time, results of experiments purporting to have come from the Iowa station as official were put out. Unfortunately, these figures were misleading and inaccurate.

Gilts fed on a mineral mixture of lime and salt and lime, salt and bone did farrow pigs a little stronger, and with a little heavier bone. However, the average number of pigs farrowed per sow was not increased by the feeding of a mineral mixture.

Don't expect the wonderful results from a mineral mixture that the fellow had with the first hair restorer. This man bought a bottle of hair restorer. While taking it home, he dropped the bottle on the cement walk and broke it. The next day he met a friend, who asked him how he came out with his hair restorer. He replied: "I didn't get home with it; in fact, I dropped it on the cement walk; but do you know, it is wonderful stuff, for when I came along this morning there was hair growing on the walk." (Laughter.)

Last summer we took twelve equally divided lots of five similar gilts, each weighing about 50 pounds at the start, and carried them 140 days to date. The basal ration fed in all lots is 3 per cent shelled corn, which means 3 pounds of corn to every 100 pounds of live weight, plus three-tenths of a pound of meat meal tankage (hand-fed) per gilt per day, plus whole oats, self-fed. Two lots are on bluegrass, two on alfalfa, two on red clover, two on alsike clover, two on annual sweet clover and two on rape. A mineral mixture is allowed to one lot on each of the forages, in addition to the basal ration. This mineral mixture is as follows: Salt, 30 pounds; spent bone blk., 25 pounds; wood ashes, 12 pounds; sulphur, 10 pounds; limestone, 10 pounds; Glauber's salts, 5.7 pounds; epsom salts, 5 pounds; copperas, 2 pounds; potassium iodide, three-tenths of a pound; total, 100 pounds.

This mineral mixture, which was fed at the rate of one-third of an ounce per gilt per day, hand-fed with tankage, increased the gain slightly, as well as decreased the feed required for 100 pounds of gain on blue grass, red clover, alsike clover and sweet clover. It decreased the gain and increased the feed required for 100 pounds of gain on alfalfa and rape. These figures are only preliminary, however. It shows that where you are feeding a good ration properly supplemented on alfalfa or rape, the addition of a mineral mixture is not necessary. The tankage fed also contains minerals; hence, a mineral mixture is not as necessary, perhaps, as where some other protein supplement is used.

We also ran a test last summer with fattening pigs on rape pasture where minerals were fed. In this test the basal ration was shelled corn (self-fed), plus a mixture (hand-fed at the rate of three-tenths of a pound per pig per day) made up of corn oil cake meal, 40 parts, linseed oil meal, 40 parts, and meat tankage, 20 parts, by weight. To this ration we added a number of different mineral mixtures, each particular mixture being hand-fed at the rate of one-third of an ounce per pig per day in one lot, and self-fed in another. The mixtures used were ground limestone and

salt, equal parts; equal parts of limestone, salt and spent bone-black; the fairly complete mineral mixture fed to the gilts; another made up of 34.36 pounds of salt, 28.64 pounds of spent bone-black, 13.75 pounds of wood ashes, 11.46 pounds of sulphur, 11.46 pounds of limestone, .34 of a pound of potassium iodide, total 100 pounds; and another, consisting of 38.81 pounds of salt, 32.34 pounds of spent bone-black, 15.52 pounds of wood ashes, 12.94 pounds of limestone, .39 of a pound of potassium iodide, total, 100 pounds.

In this test, twelve lots were fed, ten of which were getting minerals. All of the lots receiving minerals made a slightly greater gain than the average of the two check lots. All of them but one made this gain at less feed required per 100 pounds of gain than the check lots. The lot that made the greatest gain and the cheapest gain was the lot that received limestone and salt in equal parts, hand-fed, at the rate of one-third of an ounce per pig per day. Where we self-fed these different mineral mixtures, the pigs did not gain quite so much as where it was hand-fed. In the lots receiving mineral mixtures self-fed, the pigs ate about two-thirds as much as where they were hand-fed.

We ran still another test in dry lot. In this test we fed lots of ten pigs each on a basal ration of shelled corn (self-fed) plus a supplemental mixture (self-fed) made up of 40 parts of blood meal, 30 parts of corn oil cake meal, 20 parts of linseed oil meal and 10 parts of peanut meal. This mixture was chosen for one likely to provide all the practical essentials of a ration except mineral substances. Eight of these lots received different mineral mixtures. Lot 1 and Lot 10 were check lots and received no minerals. For Lot 2 we mixed salt with this supplemental mixture so that with every 100 pounds of supplemental mixture the pigs would have to eat three pounds of salt. To Lot 3 we added a mixture of salt and limestone (equal parts), so that they would still have to eat three pounds of salt to every 100 pounds of supplemental mixture, plus three pounds of limestone. To Lot 4 we added a mixture of equal parts of salt and bone meal (finely ground bone meal). The next lot received a mineral mixture of equal parts of salt, limestone and bone meal, so that they would be fed nine pounds of this mixture—three pounds of salt, plus three pounds of limestone and three pounds of bone meal—to every 100 pounds of supplemental mixture.

Lot 6 received ten pounds of the fairly complete mineral mixture, made of up 30 pounds of salt, 25 pounds of raw bone meal, 12 pounds of wood ashes, 10 pounds of sulphur, 10 pounds of limestone, 5.7 pounds of Glauber's salts, 5 pounds of epsom salts, 2 pounds of copperas and three-tenths of a pound of potassium iodide.

Lot 7 received the same mineral mixture as Lot 6, except that Glauber's and epsom salts and copperas were left out.

Lot 8 received the same as Lot 7, except that sulphur was left out.

Lot 9 received all of the minerals in the fairly complete mineral mixture, self-fed free choice style.

Six out of the seven groups receiving mineral mixtures made somewhat better gains and showed a little less daily total feed consumption than either of the check lots.

On the whole, the various mineral mixtures have done some good in increasing gains somewhat and in decreasing the feed requirement. The salt, limestone, raw bone meal mineral mixture group, Lot 5, is in the lead so far. This lot excelled both check groups in gains, appetite and feed requirements.

The free-choice group, Lot 9, made a creditable showing. The approximate percentages of materials as consumed by them when they had their choice is as follows: Salt, under 1 per cent; raw bone meal, 20 per cent; wood ashes, 36 per cent; sulphur, 12 per cent; limestone, under 1 per cent; Glauber's salts, 28 per cent; epsom salts, 1 per cent; copperas, under 1 per cent; potassium iodide (as mixed with salt), one-tenth of 1 per cent; approximate total, 100 per cent.

The low consumption of salt is probable due to high consumption of Glauber's salts (when pure is a sodium sulphate) and the heavy eating of wood ashes, which carry to a degree the elements of salt.

A good many people ask the question, Will hogs stop rooting when they are fed a mineral mixture? We have found that they will, if the rest of the ration is all right. If you are feeding a good supplement like tankage or skim-milk, on a good forage like alfalfa, rape, clover and blue grass while green, the hogs will not root to any great extent. The addition of a mineral mixture we also believe to be an advantage through the pasture. Hogs will make beds around, but they will not root and tear up the sod like where they are fed a poor ration.

If there are any questions that you men would like to ask, I will be glad to answer them.

The President: We will spend a few minutes in discussing this question, if there is anything anybody wishes to present in connection with this subject.

Q. They generally root more after a hard rain, don't they?

A. Yes; while the ground is soft.

Q. I would like to ask the speaker whether he has the ratio of cost of cottonseed meal as to the price of other feeds? You spoke of cottonseed meal quite frequently, and I would like to know the ratio of cost of cottonseed meal at the present time as compared to corn.

A. Cottonseed meal now is worth about \$38 per ton.

Q. Forty-two dollars and fifty cents per ton, is it not?

A. We were quoted 41 per cent protein cottonseed meal at \$38, and oil meal at \$42, a week ago.

Q. What do you have figured out as to the cost of corn and other feeds in price compared with the price of cottonseed meal?

A. When corn is cheap like it is this year, I doubt if it is best to feed three pounds of cottonseed meal, to two-year-old steers, especially; but it has been our experience that it does pay to feed some even with cheap corn and cottonseed meal worth \$42 per ton.

Q. That would also be true of linseed?

A. Yes.

Q. Has the station ever tried any feeding of different amounts of silage in the winter time to the cattle that were on pasture in the summer time, to see what effect there would be on the cattle?

A. No; we haven't had the land so that we could do that. We have a new farm now, and we hope to do some summer feeding of cattle in the future. One winter we tried different amounts of corn and silage, one of silage and no corn, and others a half feeding of silage.

Q. And then did you pasture them?

A. No, we didn't; they were finished and we sold them.

Q. Did you ever try feeding cattle with a full feed of shelled corn and salt allowed self-fed?

A. In some experiments a comparison was made between salt and no salt, several years ago.

Q. What was the result?

A. There is an advantage in feeding salt. There is an increase in gain. Steers ate less than half an ounce of salt a day, yet it increased the gain and decreased the cost of 100 pounds of gain.

Q. You spoke of feeding bone-meal. Where do you get it?

A. It can be bought from any of the packers, and it costs about \$75 a ton. We used Armour's finely ground bone-meal in our tests. In some of our tests we have used spent bone-black. That is the part of the bone-meal that has been used in the sugar refineries and is "worn out." You can buy it for around \$30 per ton. There is some question as to which is the best—bone-meal or spent bone-black. It may be as good as bone-meal. It can be bought from the Clinton Corn Syrup Refining Company, at Clinton, Iowa.

Q. There is a mineral that is claimed to increase the number of pigs farrowed, and I have been told that Ames recommended it.

A. There is a mineral mixture put out by a company, the formula of which was taken from the fairly complete mineral mixture that we have used. In two years' work we have found that lime, salt and bone is apparently practically as good as that mixture. Neither one increased the number of pigs farrowed per sow. Lime, salt and bone cost about 3 cents per pound to mix. The fairly complete mixture you can buy from one company for 5 cents in 200 or 500-pound lots, I believe. So far we have had good results from lime, salt and bone. In the case of pregnant sows, it might be a little

better to add potassium iodide at the rate of one-third of an ounce per 100 pounds of mineral **mixture**.

Q. Did you ever feed any of this condensed buttermilk?

A. Yes, we have done a little work with that. Two years ago we did some work with condensed buttermilk, as well as a number of specially prepared feeds. We fed corn and tankage in one lot on rape; in another lot corn and tankage and buttermilk on rape. It didn't pay to feed the buttermilk in that case, due to the increased cost. Condensed buttermilk costs more than tankage. For fattening hogs it is more expensive than tankage.

Q. What do you feed your sows farrowing in the winter time so as to retain their milk?

A. We have had good luck in feeding oats, corn, tankage and salt—one to two pounds of ground oats per sow per day, plus corn (self-fed), plus tankage (self-fed), plus a mineral mixture.

Q. How would wood ashes and salt and lime do? Would coal cinders be as good as wood ashes?

A. I think that is fine. I think it would be an advantage to feed that mixture. Wood ashes are all right, but coal ashes and cinders are not as good. We had one lot last summer where some holes had been filled with coal cinders. The pigs started eating these cinders and immediately went off feed. Their coats were rough, they looked unhealthy, and their dung was hard and black. After moving this group of pigs to a new lot where there were no cinders, they immediately commenced to do better.

Q. Have you ever tried sand and gravel?

A. No. Some of our lots are of sand and gravel, but we have never done any real experimental work with sand or gravel.

Q. Did you notice any difference in the droppings?

A. A little bit, yes.

Q. Have you had any experience in ringing your hogs with the Stewart hog ringer?

A. No, sir; we don't ring any of our fattening hogs.

Q. Do you feed them minerals enough to keep them from rooting up the pastures?

A. We never had much trouble with them where we have fed a good ration.

Q. Do the hogs get any benefit from rooting the pasture?

A. They may get some things out of the dirt—perhaps minerals. etc.

Q. Should hogs root that have been self-fed on corn, tankage, blue grass, clover and rape?

A. I don't think so, no; I don't think they should. I have often thought I would like to be a hog for a while to see why they do some of the things they do. (Laughter.)

Q. Isn't the rooting of a hog better for the pasture than it is for the hog?

A. Not if he tears it all up.

Q. Isn't that the reason he is doing it? I have a pasture that has not had hogs in it for some time, and they tore that up, and I have another pasture where hogs have been in it for two years, and that pasture has never been torn up in recent years.

A. White grubs in the pasture may be one reason why the pigs root.

Q. It eliminated the grubs.

A. A year ago we fed a lot of pigs on corn, salt and blue grass, and the field looked as though it had been plowed.

Q. Is slack coal and salt considered a good feed for hogs?

A. We have never run tests with it, but from the way pigs have done for us on cinders, I would rather not use slack coal. Some people tell me they get good results from feeding slack coal, but I would rather not use it if I could get wood ashes or ground limestone.

Q. What is the value of alfalfa hay for brood sows during winter weather in dry lot?

A. It is good. If you have good green alfalfa of third cutting, sows will get along fairly well on corn and alfalfa hay. They must eat at least a pound a day. It is safer to add a little tankage. Stronger pigs were farrowed for us where alfalfa hay was kept before the sows, even when fed tankage.

Q. What will silage do with sows just rising to farrow?

A. We haven't had much experience along that line. We fed it to two sows and fed them all they could eat for two weeks just before farrowing, and it didn't hurt them. That's the only experience we have had with it: Some feeders report that they have had bad results.

Q. Were the pigs rugged and active?

A. Yes.

Q. Did you ever have any bad experience in feeding tankage to brood sows? Do you self-feed it?

A. Never; we hand-feed it. We find that a half pound a day

per sow is plenty. If you limit the amount, you save money. Never self-feed tankage when the grain ration is limited. Your pocketbook would soon be empty.

The President: Now, gentlemen, we will have to close this discussion, interesting and instructive as it is. (Applause.)

The next speaker on the program this afternoon is Mr. W. A. McKerrow. Mr. McKerrow was formerly a Wisconsin man connected with the live stock industry there. His father, prior to him, was also a live stock man. At the present time Mr. McKerrow is manager of the Central Co-operative Commission Company at St. Paul. He was a member of the Farmers' Live Stock Marketing Committee of Fifteen. I have known our friend for a number of years, and have nothing but words of praise to speak of him. I am not going to enlarge on his work, because I don't want to take his speech away from him, or make it, and at this time, without further remarks, I am going to introduce to this audience W. A. McKerrow, of St. Paul. Mr. McKerrow. (Applause.)

FUNDAMENTALS OF CO-OPERATIVE SHIPPING AND SELLING

By W. A. McKerrow.

Mr. Chairman and Gentlemen: I have not prepared an address or a speech, because we have been contending with a workmen's strike at South St. Paul, and the various other duties that have required my attention during the past quite a long time.

I always like to come into the state of Iowa, and I have been coming into this state ever since I was eight years old. I think the first time I came to your state fair with my father we brought a bunch of sheep, and I have been coming into the state nearly every year since, and have always felt as though this great old state of Iowa stood out conspicuously in the development of agriculture, because her farmers are producers of the best class of live stock in America. Why? Because her farmers are alert to the progressive movements that are for the benefit and for the development of this great industry. You are interested in the breeding of pure-bred live stock, and, as I remember it, I believe you lead in very nearly every class of live stock that we have, with the possible exception of dairy cattle, about which Wisconsin likes to boast. And when I think about the progress you have made in the breeding of high-class live stock, it reminds me of my friend, or rather his observation when he was over in Great Britain. As you know, in Great Britain the kings and the dukes and the lords, and all of the noted personages take pride in their live stock and they are live stock producers, and at the English Royal every year the king or queen, whichever it may be, reviews the live stock, and this friend of mine picked up that little paper, Puck, and in it was a cartoon showing a great champion Shorthorn bull in the ring being inspected by a little dapper duke, standing by and admiring him, saying what a wonderful wealth of flesh, what a great loin, what a great quarter, and what a

wonderful head, and it showed the Shorthorn bull, looking at this little, insignificant duke and saying, "Yes, my kind sir, if there had been as much attention paid to the selection of your ancestors as there has been to mine, you would be a different looking specimen." (Laughter and applause.)

I don't want to take up a lot of time this afternoon telling you what a good lot of fellows you are, because I thoroughly appreciate that there are so many important problems pertaining to agriculture that you have not tackled in the same way in which, perhaps, you will in the future. We have all heard this splendid talk on the importance of feeding properly, the economy of proper feeding, and in my opinion there never has been a time when the farmer should pay more attention to economical feeding, in economical production, even though your feeds are not worth much just now. None of you people today think that you can afford to spend your labor in feeding dairy cows, for instance, and milking them six hundred times a year, that aren't producing more than 150 pounds of butter-fat. Your labor, if you are hiring it today, is moderately high. We find that true in our own farms in Wisconsin where we have to hire six or eight men all the time, that we cannot afford to keep the poor-producing animal.

You have heard something about railroad rates. Just recently one of our friends at Huron, S. D., figured out the freight rates on a carload of corn. He found that he could sell that carload of corn at home for \$300, and yet when that carload was shipped to New York City the actual cost was \$900, or twice as much in freight and other costs as he could get for this corn at Huron. And we could go on and name many samples of the same kind and you people are tackling those problems.

Now, then, we are going to come to and are approaching another problem, and I believe that every live stock farmer in the state of Iowa should be vitally interested in this situation, and that is the situation of co-operative marketing of live stock. Now, you will pardon me this afternoon if I talk more or less about the northwest or Minnesota. Your good secretary of this state shippers' association has told me that you have nearly 700 shipping associations. We only have in Minnesota something like 500, but you know there has been a condition that has forced the situation of local co-operative shipping associations on the people of Minnesota and the northwest. I say a situation forced on them. Now, I want to tell you it is not all forced, but we had in Minnesota an example of co-operative marketing that, in my opinion, is hardly approachable by any other co-operative marketing system, and that is the co-operative creamery. We have 641 co-operative creameries, which are marketing the majority of the butterfat or the butter in Minnesota. We have compiled figures for the past fifteen years, and we can prove without doubt that our farmers for the past fifteen years have received over 6 cents a pound for their butter-fat more than the farmers in states which are controlled by the old centralizer system. This has laid a foundation for further co-operative development. This shipping association work then started. I think you made your start as soon or sooner in Iowa, but you know, up in the territory where there was a sparse production of live stock, the local buying system was established. The farmer that ships out a half carload

of stock a year, veal calves, a few hogs, and some canner cows, and so on, is not a man that keeps in touch with the market. I can show you many a community that formerly maintained two, three, and sometimes four local stock buyers who bought from the farmer his cutter cow that might have been a canner at from ten to twenty dollars less than she would have brought on the market. That condition started the co-operative shipping association. We talk about Litchfield, Minn., as the first shipping association locality. I went into the hotel there one day, and the hotel man didn't know who I was. I said: "Well, how is the local shipping association getting on?" "Oh, I don't know," he replied; "pretty good, I guess; but I don't like it very well." "Well, why not?" I asked, and he said, "You know, I used to be able to slip out here in the country and buy a veal calf or a hog, without much trouble, but now when I go out to buy something from these darn farmers he says to me, 'I don't know what the market is, but I know I will get what it is worth by shipping through the local shipping association, so I guess I'll ship.'" That's a pretty good indication of the work being done by that co-operative association. And from that nucleus the local shipping association has grown until today 80 per cent of the live stock marketed through South St. Paul goes through the local shipping associations. It has grown from the little producer to the larger producer, and it has developed, as I say, most satisfactorily, and I am hoping to see the time when every Middle West farm will market its live stock through the co-operative shipping association—not necessarily that you shippers that are shipping carloads of hogs or cattle will get more money for those certain carloads, but because this foundation of co-operative marketing is bound to grow and is going to be a factor still further than merely the few benefits that might be gained through that local institution.

There are many detailed problems with reference to the local association that I might go into, but I am not going to do it. We have a good state organization; we have a state organization, in my opinion, that has been one of the most tremendous forces for good of any farmers' association in the state of Minnesota. Now, why? Because they took an interest in the matter of service as a state organization, with the railroads, with the local yard service. Then we went on to the state legislature, and I just want to mention a few things that we accomplished through the state legislature. Today our state Farm Bureau has become a great force in Minnesota. We have got a coalition of the Farm Bureau and the shippers' association, working hand in hand, the state shippers' association being the commodity organization for live stock. Now, just a few things. You heard this morning that the packer control bill was passed. Better than nothing—a good bill, a good start, but, in my opinion, it is not enough. During the hearing in Chicago, ten days ago, I had the opportunity of saying what I thought of it, and I will repeat that the bill is a good bill, but it doesn't have teeth enough in it to protect the live stock producers of this country. We went before our state legislature in Minnesota with our troubles. Well, this matter of hog troughs doesn't make much difference, perhaps, in the yards. For a time we had hog troughs in our yards for hogs, and then the companies

tore them out; said they didn't want them. Our shipping association went to the legislature, after having figured—not blindly, but having figures on our shipments showing that when the troughs were taken out we were paying for more corn and that the surplus corn would have amounted to \$5,000 a year, while at the same time we got less value out of the hogs to which we fed the larger amount of corn, so we passed a bill providing that hog troughs should be put back in the stock yards, and we got them, and we have them in today, and I think we are going to have them in right along.

We had passed thru the same periods that every other market, or practically so, has gone through at which you market your product. We found that whenever the commission merchants wanted to raise their rates, they didn't ask the men that pay the bill, but they simply went ahead and put in the rates. Whenever the stock yards company wanted to raise the price of corn or hay or yardage, they didn't ask the producer to sit in with them and consider that problem, but they raised their prices. Our shippers went before the legislature and said that the time had arrived when we must have a board of arbitration in Minnesota that will settle these problems, determine a fair rate on feed and on commission charges, and we passed the bill, which is under the jurisdiction of the railroad and warehouse commission. Well, then, in the natural course of events, of course, would come the court procedure that you farmers all know from experience is the resort of those who don't want to have these things go through. Two years ago the bill was passed, and we are going through a series of court proceedings. The first thing was when the commission lowered the commission charges, and the first case was brought under the claim that the yards were under the supervision of the federal government, and that case went along and was decided last April. The Lever act went out of effect on March 3, so federal control ended at that time. Then the commission established the rates—and the law provides for reasonable rates. Well, they took it to court on the word "reasonable," and it is still in court. (Laughter.) It is the same way with feed. We are paying \$1.25 a bushel for corn up in Minnesota. You aren't paying any less in Chicago or Sioux City. We have faith in winning both of these cases. We, still further, have other litigation pending, but I am not going to go any further into that situation, but this is what happened: Our farmers got tired of going through the series of court proceedings and fighting every step of the way; they believed that too many people were engaged in the commission business on account of the high rates, and as long as the commission merchants were not willing to take a fair rate of commission charges when the producers' live stock had dropped 10, 20, 30, 50, 75, 100 per cent, that they were going to see if they couldn't operate and do their own business more efficiently than supporting the enormous amount of men that were living on the live stock producers, and about that same time the Committee of Fifteen was appointed; but our association went ahead and organized and organized on practically the same plans as the report of the Committee of Fifteen.

Now I want just briefly to tell you of our organization, for the purpose of trying to convince the farmers and the Corn Belt Meat Producers'

Association that they can run their own commission business; that they can absolutely succeed beyond any question of doubt, providing—providing the farmers of the middle west will support their own institution and go into it believing that it can and it will succeed, and I want to say that you will save the farmers of Iowa—not this commission, that is not the big thing, but you will save them hundreds and thousands of dollars a year. Somebody will say, "That's a pretty strong statement." It is, but we must have your support, gentlemen. That is what we are getting at South St. Paul—support.

I don't think I wish to go into detail about our organization. I presume that every one of you has read the report of the Committee of Fifteen. Its report provides for a terminal marketing agency composed of the live stock producers marketing there that take out a membership, or if they don't take out a membership in the beginning, they patronize the institution, and the first patronage dividends, if such are declared, the memberships will be taken out. But I hope there are no farmers who will wait and say, "We will get on the band wagon when we see she is moving along smoothly." You know that that is the habit with too many of us, that we say, "Well, let's wait and see how she goes." I heard an Illinois man say in South St. Paul the other day, "Do you think it will be safe to ship a carload at a time to the new co-operative association at Chicago?" Just think of it! Your terminal marketing agency provides for a stocker and feeder department. It is able to sell direct from the producer of stockers and feeders to the man that feeds. Your membership isn't much. We borrowed \$1,000 at South St. Paul to start putting on our membership drive, and we put out twelve men. Now our organization doesn't belong only to the Wisconsin Society of Equity, although we have got a lot of men that are members; doesn't belong to the Farmers' Union; doesn't belong to the Farm Bureau, but belongs to every man that is producing live stock in the northwest, and that is one trouble—in too many sections of this country you will find men that say, "Well, if the Farm Bureau won't play with me, I won't play"; "If the Farmers' Union won't play with me, I won't play"; or "If the Society of Equity won't play with me, I won't play." I want to tell you that that is the most serious mistake that can possibly be made, for your opponent is always looking for that kind of meat—it is sweet and savory to him—it is the greatest thing to destroy co-operative institutions of anything that you can think of or realize. We don't have a market like Chicago, but we have farmers to the number of 60,000 that belong to our marketing agency through the local shipping associations in all the states that market at South St. Paul.

Just a word about the magnitude of business, and then I will go back again. We started on the 8th of August. We handled 71 cars the first week; the first month we handled 442 cars. The old line commission firms said, "Well, gosh, that's pretty good, but they have reached the height of their business." The next month we handled 701 cars, and they said, "We can not see how it happened, but they are not going any further." The month of October we handled 1,100 cars, and then they began to guess. Last month we handled 1,293 cars. The first month we

handled twice as many cars as the highest producing firm on the market; the next month we handled three times as much; the next month nearly four times as much, and in the first four months we handled 236,570 head of live stock, and the firm next to us handled 81,900 head. So much for business!

We handled in the first month in dollars, \$502,000; the next month, \$788,000; the third month, \$1,207,000, and the fourth month, \$1,399,000, or a little better than a million dollars a month.

I am just going into these details to show you that in spite of, perhaps, the greatest opposition that almost anybody or any farmers' organization ever had, the farmers put it over. We had a big organization of salesmen. We had to, to start, and we had more business the first week than anybody else there. They said we were going broke; we couldn't pay expenses. The first week we paid for our labor; the second week we recovered all expenses; the third week we laid money aside, and today we have \$26,000 out at interest that we don't need in the business, and besides this, I told you the railroad and warehouse commission established a lower rate, 25 per cent lower, than the old lines wanted to charge. We stepped in and accepted the railroad and warehouse commission's 25 per cent lower rate. If we had charged that high rate that the others are charging today, we would have laid aside for the farmers of Minnesota and the other states marketing there approximately \$40,000. So much, then, for the business and the financial conditions.

Now, then, how about the organization, and what benefits should the farmer derive? You save a little commission, a thousand or twelve hundred dollars a week. That is a little something. In my opinion, the greatest benefit that the farmer can develop out of these terminal markets, and I hope to see it within another year, is most of the large terminals organized with co-operative marketing associations of which the biggest feature is the stocker and feeder department. Sure, the old line fellows went around the country; they had their men out in the country, and they told the farmers that these farmers down there were weighing cattle to themselves; they didn't know where these cattle were going to, but they were weighing cattle to themselves. Of course, in some men's minds, not understanding how the thing works, there was confusion, and they said, "Well, by gosh, that's funny!" Wouldn't you rather have a **stocker and feeder department** established at Chicago to handle your stocker and feeder cattle than to support 200 speculating firms? I would! Wouldn't you? If you were a farmer out in the country and you could develop in Chicago a bunch of salesmen in your stocker and feeder department of reliable, honest men, that were absolutely checked up on, were working for a salary and not for every dollar that they could pull out of your pocket, wouldn't you? I don't know of a harder thing for a man who wants to buy stocker and feeder cattle than to walk down the alleys and have 200 people tackle you and not know what kind of stuff would be pawned off onto you. I don't say all speculators are like that, but all speculators have got to live, and who is supporting them? I want to say that we can handle at South St. Paul all of the stockers and feeders at one twenty-fifth the cost that the farmers are now paying

in maintaining fifty-five speculating firms. The stocker and feeder department, then, is a part of the co-operative commission association, in charge of a high class man, and if today you have a heavy run of stockers and feeders at your market, what happens? The market usually dips a little, doesn't it? What does Mr. Speculator do? He slips in and buys a pretty good lot of stuff. The next two or three days the market may improve. Of course, I don't say that it has the last couple of years up until this summer, but over a long period of time it does. He makes his profit all the way from nothing up to \$1.50 a hundred, perhaps. Your stocker and feeder department is working for you farmers, and just as an example, suppose the stocker and feeder man buys some steers, he is going to try and play about even when he is going to sell them. He may be able to pay you farmers 10 cents a hundred more than the market demands that day. Those cattle are kept or may be sold that day, but probably kept and shaped up and sold to the farmer for as near cost as you can figure. Now, our stocker and feeder department today owes us, perhaps, around \$1,000—just lost a little bit, but it is a very easy thing to try and keep it playing about even, and in that way there is a great economy through a long period of time to have that stocker and feeder department established, and I think you will find it is going to be the big factor in the co-operative marketing plan.

I want to say a word about one or two other problems. You know, up there we get not very many hogs compared to Chicago, although I know we have been running second or third. Some days we have as many as 35 or 38 per cent of the hogs in our own alleys. We have sold as many as 7,200 hogs in one day. Somebody says, "I don't see how you can handle them; too many hogs for one salesman to sell." Gentlemen, I am hoping for the day when at South St. Paul the Central Shipping Co-operative Association will have in their alleys 75 to 85 per cent of the hogs. Nobody under God's sun can tell me that this morning thirty-five hog salesmen at South St. Paul can sell 14,000 hogs to as good an advantage as one salesman. Do you suppose that those thirty-five hog salesmen, all tagging after Swift and Armour buyers, and one or two outside buyers, can hold up the market as well as if the Central salesman should stand there and say, "Come to me to buy your hogs"? I say that on all these markets, if the time comes when the farmers can have the hogs in their own hands on the nine large markets, that they will be able to negotiate a whole lot better with your national organization than they are today.

Now, just a word or two. Some people say that I am sometimes a little extreme. In my earlier years I was in the live stock business with my father and then worked for the agricultural college at St. Paul, and through those associations I assumed that a fellow would never be molested, and assumed that every man that you would come into competition with would use good, clean business tactics; and I never assumed that the same opposition, the same schoolboy tactics, could be put into effect as I met since August 8 on the South St. Paul market. (Laughter.) So I suppose it makes a fellow just express himself rather forcibly sometimes. We started in—or, in fact, we hired a sheep salesman on his own request, but

he was selling sheep, he and his brother, for sixteen other firms; I said, all right, we will handle them on the same basis. On the Saturday before we started up on Monday, I saw a notice in the local paper that he had never negotiated with me because the other firms said, "If you sell for the Central, you can not sell for us." I had to get another sheep salesman. Two of our alley boys came to me and said, "We can not work for you, because the other fellows say if we go to work for you—and you won't last long—we can never get a job with them again, and we can't go to work for you." On Monday morning, when we were ready to operate, every single scalper, trader, commission man, outside buyers, little Jew cow buyer, and everybody that ever bought a hoof of live stock, outside of the packer buyers, wouldn't look over our alley fences. And if it hadn't been for the support of the farmers, we would have had a real problem. If the farmers had sent us in only five or eight cars of live stock instead of seventy-one for the first week, we would have had a real problem. What do you suppose we would have done with that dozen dairy cows that would have come in? What would we have done with a half dozen or ten steers of one class, with a dozen other classes on our hands? We couldn't make up a carload lot to send to the feeders. We sorted this stuff and dealt with a steer buyer from Iowa; we had four or five from Illinois, two dairy cow buyers from Wisconsin, and they were on the job to buy our stuff. We could sell them a carload at a time, and we moved them off at fair values, and from that day on we have had more country buyers—I think I am safe in saying this—than any ten firms in the South St. Paul market, and most of the days, I believe, as well as all of them put together. Why? Because we can sell the live stock. I mentioned the stocker and feeder department. Now, don't think that all of our cattle go from the commission association into the stocker and feeder department, because every hoof that we can sell direct from the farmer shipper to the farmer buyer is sold that way, but only the live stock where the local shipping association wants its returns at once and won't wait until we sell that stuff, is passed through the stocker and feeder department, and this word has gone to the country and you buyers in Iowa, and the buyers in Illinois and in Indiana, are continuing to come to us for business. I have a lot more to tell you of the experiences we have gone through, but I am not going to detain you any longer about this problem.

The South St. Paul Farmers' Commission Association is here to stay; it is here to grow, and I predict that before long, not a month, probably, or two months, but within a year, 50 per cent of the business at South St. Paul will be going through the Central Commission Association, because our farmers are co-operators; because they have faith in their own organization ability, their own business ability, and I want to see every Corn Belt Meat producer, every true live stock producer in this state, put his shoulder to the wheel in the development of a co-operative marketing association at Chicago, and I want to tell you gentlemen that the thing is going to succeed bigger than most of you can conceive of. All we need is good, true co-operative effort. (Applause.)

The President: I take it that some of the men here have some questions that they might want to ask, and we will spend about five minutes, if that is the case.

Q. I would like to ask a question, Mr. McKerrow. Supposing an Iowa or Illinois feeder sends an order to you for a certain type or class of feeder cattle. In your feeder department you don't have the goods to fill the order, are you able to, or do you ever attempt to go out into the yards and fill the order from the regular commission companies?

A. I guess most of you heard the question. The gentleman asks, are we able to go out and buy cattle from other people? We bought a few head from one firm that belonged to the exchange, and I understand that he was—when we used to go to school, if we did something naughty, we had to stand up by the desk, and this firm was expelled for a week before they could again operate on the market. (Laughter.) The thing that irritates me is that this group of thirty-three firms are attempting to control or say how 60,000 farmers are going to have their business done. If they can get away with a thing of that sort, I say that it has come to a pretty pass.

The President: Mr. McKerrow, I would like to ask you—it may be that you are not in a position to answer this question: On the basis of your November receipts, what would be about your pro rata—that is, in percentages of commissions per car?

Mr. McKerrow: Our November business—we did business for approximately \$8 per car, while the average old line charge is, I think, between \$19 and \$20 per car. Of course, we did a big volume of business in November, but I do believe there is no question but what we can do business for, easily, \$8 a car for the year—I feel that way now.

Q. How many cattle salesmen have you got up there, Mr. McKerrow?

A. We have now five cattle salesmen. We started out with three. We started out with twenty people, and we now have thirty-two in the organization.

Q. How much money have you in the bank now?

A. Twenty-six thousand dollars. We have another thousand dollars to put in this week, and you can count that if you want to.

Q. That has all been earned by the company since you started in business?

A. Yes. Now you sometimes hear farmers say that these co-

operative organizations cost so much money. We have collected from our farmers about \$15,000, and we have ahead of the boards about \$27,000, so that we have just about doubled what they have paid in, and are nothing out today at all.

Q. Do you give your men who are bidding on stockers and feeders preference over the scalpers? And I might add to that it is not true in Omaha. I have been in Omaha twice within the last three weeks and I have been unable to buy thru the co-operative society without first having the scalpers cut in with a 2 per cent premium on them, and I want to say that before this body of people.

The President: Is that true of the co-operative association there?

A. Yes, sir; I tried to buy them from the co-operatives and I had to pay 15 cents a hundred premium to the scalpers.

The President: I am surprised to learn that.

Mr. McKerrow: Here is what I understand that the South St. Paul people, and I won't say it is an Exchange action, but they have, I understand, had an agreement with each other whereby the commission men said, "You can not operate with the Central," and the other fellows have said, "You can not sell to the country buyer," and the result now is that everything is passed thru to the scalpers before it goes to the country. But that is a situation, if it be true, if you farmers of Iowa and Illinois and every state operate in your central and co-operative or terminal marketing agency the way you should, you will not let that sort of thing creep in and continue, will you? I would be surprised at the integrity and intelligence of the farmers if they would let that condition arise and continue; so if it may be true in one case, gentlemen, we are not going to let that condition exist on these large markets for any length of time. We can not do it!

Q. Do you have any split shipments with the other firms?

A. Yes, many of them. We have got a lot of farmers that are doubting Thomases, you know, but I want to say this, we have no discrimination from the packers, no discrimination from the stock yards company. No firm on the market has a better lot of salesmen than we have, so why should any farmer put in split shipments and doubt the ability of his own organization? But they do it, and they will probably continue to do it. I don't expect ever to get 100 per cent at South St. Paul.

Q. Do you take care of feed cost?

A. Absolutely.

Q. You have your full share of the order buyers' business?

A. I think I am safe in saying that we probably get more hog orders—I think we get about one-third to one-half of all of the order buying on the market. That came with the class of salesmen that we have.

Q. You have some competitive men there—speculators? There is a good deal of your stuff that comes to St. Paul that is forwarded to other markets. Can you sell to those people?

A. On other markets?

Q. Yes.

A. To the fellows that ship out?

Q. Yes.

A. I want to say this, that we decided when we started that we could just as well ship our stuff to other markets as to some guy that buys and ships them himself. We ship some cattle, now and then, to Chicago, but we can just as well ship those cattle to other markets as other fellows. The little commission firm can not ship stuff itself, it can not shape up a load of any one kind to ship, but we are getting from 150 and up carloads of live stock a day, and we can fit up a carload of bulls, for instance. We can fit up a farmer feeder with 750-pound medium class steers, because we have got the volume. We can fit up a carload of feeder pigs, because we have got the volume. It is just as I said before, we have on many days got from 4,000 to 7,000 head of hogs a day.

Q. Your volume of trade is very well distributed over the six days of the week, or how?

A. That is a question of orderly marketing. I think that the farmers can regulate the market when they get well organized. We don't yet get a uniform flow. We are now negotiating with the railroads to change the special stock trains thru our association, to get a more uniform flow thruout the week.

Q. I would like to ask one more question: Thru operations with the buyers of Swift and Armour, what time of the day do they come around to buy?

A. I think if you will come up there tomorrow morning, you will find Swift's calf buyer in our alleys the very first, because we save 600, 700 or 800 calves. I think you will see that their she-stuff buyer is first in our alleys. Their steer buyer usually comes in not later than nine o'clock or earlier than eight o'clock.

Q. I have been bidding on that market for about twenty years

and I have found that among those commission men there is an advantage in getting the early buyer.

The President: This is an interesting question, but we will have to close our discussion at this time and proceed with our program. I think we all appreciate the remarks of Mr. McKerrow in regard to this co-operative marketing business, which is something that we should give careful consideration to.

The next number on the program is an address by Prof. E. G. Nourse, of Ames, on "The Economic Outlook." I am sure we are all interested in the economic outlook, and I don't know of anybody that is better qualified to give this to us than Prof. Nourse. (Applause.) So that at this time I take pleasure in introducing Prof. Nourse.

THE ECONOMIC OUTLOOK

by E. G. Nourse.

Mr. Chairman and Gentlemen: It is said that variety is the spice of life—each speech is a little different. Your president started with a manuscript; the next man spoke without manuscript, but referred occasionally to notes; the next speaker came with a sheaf of papers in his hand and referred to none of them, and I come on with a little picture. (Laughter.) I am not going to say very much about it, because I know you are getting tired now.

I don't know that there is much use of drawing a picture of this kind, because that is a picture representing what has been happening to us, and we all know what has happened to us. And yet there are some things which, perhaps, will be brought out in this manner a little more clearly than you may have seen them presented without the use of figures, which are now becoming available. We hear a good many comments on the fact that the farmer's very sad economic outlook at the present time is because of the maladjustment of his industry with other industries. We think and feel—and this chart bears it out—that prior to the war our agricultural industry was pretty well adjusted to other industries, so that while prices may go up a little bit in one year or down in another, that differences of a few per cent were not such as to spill the beans, so far as the farmer was concerned, and that is the position that obtained here in 1910-11-12-13. We have four lines—the upper one representing the price of the ten principal crops; the lower line here representing the prices of the principal classes of live stock. You see that they move in somewhat the same way, from that start going down and coming up again, and then converging, live stock prices going up and crop prices coming down in 1913, and that is taken as the base year, or 100 per cent. That is the base year, being the year before the war broke out. This yellow line here represents the general commodity price index number, omitting farm crops and food products. Now, if you take a percentage and ratio of those things to one another, the ratio between the farmers' products and those other products,

you get this black line running along here with very slight deviation from a general base line of 100. In other words, everything went down a little bit last year, and this black line follows the same trend. Now, here comes the worry and the fireworks: this green line which goes sailing up here and down again, as we all know, and that is the crop price line. This red line going up not so high, coming down sooner and coming down somewhat farther, is the live stock. Now here our yellow line does the thing which we have heard about so often, it lagged both coming and going. That is to say, your price of crops moved up here quite rapidly; your price of commodities, as we know, being high at the beginning of the war, declined for a time, and afterward picked up, but for several years, clear over to here, to the end of the war, tended to lag somewhat behind the advance of farm crop prices, but tended to be a little bit ahead of the animal prices. If you take the ratio between those two, you will see that the farmer did, as the statement is often made, get a little bit the jump on the thing at the start—his condition was actually improved to a considerable extent in the first year of the war; that is to say, he was a little ahead and the other interests were lagging behind. The next year he was better than he was in 1913, but they were gaining on him, and then the commodity price shoots up very, very rapidly. The forced orders from Europe and that sort of thing were responsible for that. The condition of the farmer declines, not only with respect to what benefit he had been getting those two years, but wipes out all of that improvement in his condition and considerably more, and in the year 1916 he is actually worse off than he was at the opening of the war and the average of the prewar years.

We entered the war in 1917, and it was jazzing up somewhat, and we started through the cycle with more steam, farm prices shooting up very rapidly and live stock shooting up at not quite the same rate, and commodity prices at about the same rate as our live stock. What happens? Again the big jump in farm crop prices, which gave the farmer a little bit of the first advantage, and he comes above the line about 108 per cent as compared with prewar years, and just about catches up what he lost previously, and then commodity prices start going up here while farm crops and live stock prices both slow down, even more than this indicates, because the man who drew this chart is no friend of mine, and he has made it look more favorable to the farmer than the facts warrant—so they are about four points higher than they should be, and the advantage gained in the preceding two years is just about half wiped out. Then we hit the toboggan in 1918, and that toboggan has let us down so rapidly that we are just about here at the present time. Now, as a matter of fact, those figures for 1921 are not complete for this year; they are figures for only eight months of this year, and whether the figures will be higher or lower we will have to see along in January at the time the figures become available.

Now, as to the farmer's situation at the present time—he is feeling the effects of conditions that are just behind him; he is feeling that advance of commodity prices because of the rapid decline of his own crop and live stock prices, and that is true notwithstanding the fact that we

know in a general way commodity prices have begun to fall. In fact, they have fallen to a considerable extent, but falling from a higher spot, and falling at not as great speed as farm product prices, his relative condition is even in this year still worse than it was last year or any other year of the whole series. Again, the young man who drew this chart slipped up a little bit, for commodity prices have not come down as far as he represents them to have fallen; they have come down to 156 per cent rather than down to 183 per cent, as he has plotted there.

Now, I think that the present moment is one when the discussion of the economic outlook is particularly in order—it is an interpretation, and our question is, "If those are the facts, what do they mean?" The statement is frequently made that while our prices have been hit—some of them were hit even as far as the second year past—that now these other prices are being hit, and it is being said as the saying frequently runs, we have turned the corner. The present chart hardly shows that we have turned the corner. Possibly somewhere in here during this year we did turn the corner and conditions will tend to pick up—farm prices will improve somewhat, whereas commodity prices will suffer or enjoy still further liquidation. Possibly there will be some turn-up, and next year some expect this line to run horizontal or perhaps on the up-slope. I think there can be no question we have touched bottom and that we have got to the corner—we are at the corner rather than that we are around the corner; or the question may be put this way, "If we are around the corner, what is on the other side?"

I must confess that I can not come to you as a prophet of any very great amount of optimism. I would certainly not want to, and wouldn't dare, come to you as a prophet of pessimism. It seems to me, however, that any one who attempts to talk on such a subject at the present time should be very much the spokesman for caution. There could be no more serious mistake than to accept easily the doctrine that we are around the corner, or, having hit the low point, we are going to bounce up with anything like the resiliency that is characterized by the war period, or go up with anything like the speed that we have gone down, and I noticed that tendency recently. Some one sold some land in Iowa for \$255 an acre the other day, and the statement said this meant the restoration of land prices, the revival of land values. I don't believe that is a proper interpretation to make from it; or we may be inclined to say that crop prospects next year, along in the spring, as we begin to get monthly crop reports indicating a lower yield, and hence we will immediately place upon those conditions an interpretation of restored prices. I think there is nothing that could impair the rehabilitation of our agriculture and the economic stability of our country as a whole more than to mistake those slight indications of improvement for something which is of greater magnitude than we may reasonably expect. In fact, I think that it could be shown that already that tendency has been too great; that in the first place the doctrine of a permanently higher price level was kept before the people, and that that prevented our facing the issues as they did exist in 1919-20, and still continue to exist in 1921. We are, perhaps, impressed just now with the improvement of conditions abroad,

with the improvement of foreign exchange for a day or two. Those things may be summed up, as the old saying goes, one swallow doesn't make the summer. The fundamental condition we have to bear in mind is that the great center of civilization upon which our whole economic life depended still is bankrupt, and that the prospect of facing that situation has not been actually met up to the present time. The statement has been made here today, and it has been made at every meeting of farmers, that conditions can not improve until the purchasing power of the farmer is so improved as to enable him to dispose of his stocks at a price greater than at the present time. Argue that thing around, and you come back to the situation of the economic life of Europe at the present time, and the outstanding thought of it is that they have not up to the present time balanced their budgets; they have been living beyond their means since the end of the war period, they have been getting worse rather than better, so far as their possibility of buying goods from America at remunerative prices is concerned. Just now, I think one of the outstanding things amongst people discussing this question is to point to the large volume of goods that is going abroad, but going abroad at what sort of prices. In other words, if you cut your price down low enough, you can sell in quantities, and that is exactly the point, that the farmer has had to mark his stuff down to a price so low, and he has accepted those prices simply because he was in a position of distress, that the figure of increased volume of exports has precious little in it that is encouraging, so far as he can see it. In other words, what may we expect this dark line to do? If we can expect it to stop its decline, not by an immediate advance of considerable magnitude in farm prices, but let us hope by slight advances, offset by considerable decline in the commodity prices, we may see the farm population holding their own next year, or at least getting a firm footing on this slippery hill that they have been sliding down. Further than that, I think it would be extremely unwise to count upon additional improvement. To make purchases or to incur obligations on the basis of any greater improvement than that is, in my judgment, extremely unwise.

I have noticed the remark passed from time to time that agriculture is the only industry which has really liquidated, and that it has entirely liquidated. I think some exception should be taken even to a remark such as that, as much as we have tried to believe it. So far as the matter of corn is concerned, the price is deflated, but the stocks are not liquidated. There is still an unprecedented volume held over on the market from previous years, and there are some other things which have not been liquidated. One of them is, and I suppose it is unfortunate and unpleasant to mention it, but one of them is land prices. We know that to a considerable extent our land prices were marked up during the war. Now, have they been liquidated? The question there is, are they going to be able to be turned, in the years following, during which a considerable share of them have got to be passed from hand to hand, are they going to be turned at approximately the values to which they were marked during that war period? What do we mean by liquidation? Certainly we do not mean that those lands have been resold on a supply-and-

demand market at prices that they would command in the market at the present time. It would be nothing short of disaster if that were done. But we have this condition still—a considerable number of persons who obligated themselves for the purchase of land at high values; and that did two things, it registered that value and committed them to that scale of investment until they are repriced in a new sale, or until those lands are beginning to pay out on that basis of valuation, and until that is done we can not say that the agricultural industry has been liquidated.

I might add to that a question of whether we are psychologically liquidated. If we still think that land prices, after a short period of inaction, are going to advance with the same rapidity that they did during the war period, and to the same extent in the period before the war, I would say that psychologically we are not liquidated. If we expect that prices, now that they seem to have hit the bottom, prices not individually but probably on the average, that they are going to show a marked improvement, and that our woes are going to be solved from that direction, then I would say that we are not liquidated. I think we have got to face a period of several years of a long, steady, hard pull around that corner; that we are perhaps rounding it as we pass from 1921 to 1922. I think we have had some good counsel with reference to that today—with reference to the manner in which the agricultural industry of this state, which is a long way from being solvent, is going to work out its own salvation, and when I say that I don't mean that it will work itself back from destruction, but work itself back to a good position of prosperity, at the same time maintaining the standards of living that we have set up for corn belt agriculture.

There are in that connection, I think, three points which might be well observed, three general lines of activity by which the agriculture of this state may reasonably expect to work out such a salvation. I don't know what order one should put them in. In the shippers' convention, I suppose that the question of marketing and particularly cooperative organization should be put first. Over here at the bankers' convention the other day the question of finance was put first. Along in January, when the Farm Bureau Federation meets, I suppose the federated forms of agricultural organization will be put first. You can put them in any order you like, but those are the three things which, it seems to me, may well be thought of as the fundamentals in this brightening economic outlook for agriculture.

We have established during this period an organized movement and an organized feeling among the farmers which, I think, is going to be a permanent asset to our agriculture in the future—the sane, substantial sort of activities which have characterized the farmers' associations of this state during the war; their unwillingness to embark in wildcat schemes for improvement; their ability to work with other interests, with commercial organizations. When I say “commercial organizations,” I mean in the main cooperative organizations for the marketing of farm products. And with financial organizations. In their legislative program they have led the van for our warehouse bill, and various others; led the van for better conditions which now may be worked out, not that have

come in a hurry, but which may be worked out in the following years. In addition to that we have gone a long ways in the direction of the movement which Mr. Sykes spoke of this morning, of having the farmer as the agricultural industry represented in places where public or quasi-public measures are being framed which have so large an effect upon the economic life of the country as a whole. We heard at Ames a few days ago a stirring address by Senator Kenyon, in which he told us of the work that had been done in our national legislature at Washington to represent sanely but very determinedly the needs of the industry which is the chief industry of all this country out here. I am very much distressed since that time to see so open a declaration of hostility to that agricultural group. It seems to me that we have in a sense come into our own and that, in coming into our own, we should make no apologies for representing this great industry, but should only see to it that the opinions which are expressed back in this country, the views, the measures we insist upon, shall be sane and so sound that after being pushed through to recognition by agencies of that sort, that the sane and thinking people of this country will endorse them. I am very much encouraged in that connection to think back to those conferences we had a year ago when some people came out from Chicago and told us what we should do and how unsound and how radical we were in saying that we thought our judgment was, perhaps, just as good as theirs, in saying that those were not the things that should be done. Now, in the twelve months since that, how many of the men, strong men, men who stand well in those sections, have come out and admitted that the judgment of this western section was sound, and that the proposals that they made were not radical, and even now many of them saying they are willing to join with us in making a systematic procedure for the strengthening of our industrial possibilities.

Now, the second point that I want to make in that connection is this matter of finance that is before us. We had a conference over here at the Hotel Fort Des Moines the other day, and I see the faces of a good many people who were there and of a number who were not there, and it seems that the purpose of that conference, if it was a purpose similar to the one last year, has not been met in anything like the measure that it was met last year. If I sense the consensus of the people last year who went home from the farmer-banker conferences, it seemed to be that they had an outlook where some definite results might be accomplished; but the people who went home from the conference the other day were just a little bit more muddled than they were before that conference was held.

In connection with the economic outlook, which is supposed to be my subject, there are two points that it seems to me should be stressed. The outgrowth of those meetings last year was an ideal that established financial institutions in this state are now sufficiently strong so that they could, by introducing some additional agencies, serve the needs of a state like this, and they wanted to do it, and that a progressive section within that banking fraternity came out to take that sort of a stand. Now what has happened since that? You know perfectly well. Through the joining

of farmers' organizations, the general movement that I was speaking of a moment ago, with the banking interests, a law was to go on our statute books, an enabling act, providing that we could add to the financial machinery that we have been able to build up in this western country slowly since the '70's, more rapidly since the end of the '90's, since about 1900, that we could coalesce that and bring it to a head in one agency which would serve this agricultural industry in the same way that other industries are being served. A case in point: What was the trouble, so far as the financing was concerned, in the agricultural industry? Commercial banks were gummed up, were flooded and congested with the short-time loans of farmers, trying to cushion the fall as much as possible, trying to carry on their operations, working like the mischief in the meantime and paying off as they could. That was the situation here. What was the situation in industry, particularly the latter period as they have been traveling that hard road downward? A similar situation. Commercial banks have been gummed up to a considerable extent, but these other industries in considerable measure are made up of strong corporations or organizations of one sort and another that are in a position to fund those short-time obligations, particularly since our investment market has somewhat improved, and they have funded into longer-time obligation notes and bonds of shorter maturities or even longer maturities. They have said, "This is an extraordinary situation and comes only once in a lifetime or once in many lifetimes, and these obligations come in unusual proportion, so they should be spread out and not try to dispose of them all at the present time." And this was the situation, that the banks which had grown up so splendidly in a short period of time, could not meet—a crisis of this sort. I think that the leaders of the farmers' organizations in this state who have received this service agency, with the assistance of our banking institutions, to fund those obligations for longer maturities and pass them out into a wider market, have performed a signal service to agriculture. I have no hesitancy in saying that from such study as I have given to this question of banking and its allied problems, that I think that measure which was passed by the legislature last winter marks a real milestone in the affiliation of decentralized finance for the states in this great western country. And now the War Finance Corporation has come along to assist and extend that sort of help, before the state corporation can get into action, and perhaps in addition to what they could be expected to do at the present time. And I say if the banking interests of this country followed by the local banking interests fail to perform their function in that system, of its two or three parts, then the financial difficulties of our farmers are not going to be met; so whether it is the Iowa Farm Credit Corporation or whether it is the War Finance Corporation, the point that that comes down to is just as we said a year ago last fall, that personal conference between Mr. Individual Farmer and Mr. Individual Banker, if the banker looks upon these arrangements which have been made as a means of saving his bacon and preventing him any further worry, then the problem of the farmer is not solved. If, on the other hand, perhaps having been somewhat over-optimistic during the war period, if Mr. Farmer thinks it is about time for another speculative advance, if he over-estimates the brightness

of our economic outlook now, he will make these very agencies a harm instead of a service to his constituents. If he finds a man who has loaded up during the war period and has hated to let it go, if he encourages him to hold on and strings him along, kids him about the return of higher prices, and that sort of thing, he is not really serving as a credit agency, because one thing which is placed upon that man who assumes the responsibility of being adviser there, or determining when credit shall be extended and when credit shall not be extended, is the duty that his judgment shall be sound and good, not only as to the moral character of that man, not only as to the local conditions in that community, but he is bound to give that service on a professional basis and advise when to let go as well as when to hang on. For instance, take an extreme case of a banker who extended credit for the benefit of the farmer in saving his \$3 wheat—he was actually doing harm rather than doing him a service; so that it seems to me that the farmer can at the present time challenge the banking system of this state to render that sort of service in the local community, and when or if it seems that the needs which reasonably should be met within that local community exceed the amount which the bank can borrow through its correspondents through the Federal Reserve System, that it should take full advantage, first, of the War Finance Corporation, which is in operation at the present time, and, second, should affiliate with this state agency which aims simply to crown the development of local banking in this state with an agency which will for the first time in any state put on a permanent basis the sort of longer-time credit service which the agricultural industry needs. We know that enough money will be made available through the War Finance Corporation, so that in the main I think we can say if we will only take advantage of it, it supplies the means of improving that second great situation in connection with our economic outlook.

Then the third one—I don't know that it is necessary to say so much about the third one, because of what Mr. McKerrow has said here has illustrated in a particular case all that might be said in a more general way. Possibly I might urge caution upon each one of those heads that I have taken up. I cannot speak quite so broadly as some people do about salvation by marketing agencies. You noticed a year ago when we had committees with all of their old numbers attached to them there was a good deal of talk when those committees had made their reports that what had happened at the end of the war would be prevented from ever happening again? I don't think this is a job for any marketing agency to perform, any more than I think that any sort of credit agency could prevent any friction or difficulty in periods of that sort. The world was ruined by a catastrophe such as we trust, after those agencies which are in operation in the Arms Conference, and what will follow, have come to a head, will never happen again, but if it does I will venture to say that no sort of marketing arrangements, that no sort of co-operative agencies, could prevent a considerable amount of the decline, the disastrous decline, which took place at that time. It was something which had reference not to the cost of marketing, but to the whole supply-and-demand situation which ran back to the conditions of production and consumption over the whole

world. But after saying those things which I think co-operative agencies or any other immediate connected agencies cannot do, I still would come out with as strong a declaration as I could of the things which can be accomplished through just that sort of activity. I think we may well stress this particular point, because this is a joint conference not merely of producers of the Corn Belt Meat Producers' Association, but of the men who ship the millions of dollars and even the hundreds of millions of dollars' worth of live stock out of this corn belt territory into these eight or nine markets by which we are surrounded, and you are going to consider in the course of this convention that very problem of how all that can be accomplished for the bettering of conditions through the improving of marketing conditions, which is in process of working itself out.

Now, we have gone during the past—it is hard to say just how many years, but most of it has been during the last four or five years—we have gone through several of the first steps of establishing such agencies. We are now—although that also dates back several years—going through the second step. The first was to establish shipping agencies in the country; the second is to establish selling agencies in the central markets. Frankly, I think it will be quite a number of years before we do a great deal in accomplishing the third, and, as we are inclined to put it, the larger purpose of dovetailing the operations of this to the burdens of the other in such a way that we actually stabilize the markets, but if we are ever going to take any step in the direction of stabilizing the markets, it is only because we have got into good working order these other selling agencies through which the producer makes contact with the consumer at the central market, and back of that we have established also on the highest level of operating efficiency the agencies by which the scattered producers of carloads and less than carloads assemble them at the country shipping points, choose the different markets to which they wish to ship and handle the detail of shipment, and are there to respond either on their own motion or that of the selling agencies to such instructions or recommendations as may be made with reference to equalizing shipments between markets or between different times, and all of the rest that constitutes that stabilizing process.

Now, the work of the co-operative associations in this state has made wonderful progress during this last year. It was a year ago the 11th of December, if I recall it, that they met up at Ames, and they hardly existed—there were only about forty men there, the association was scarcely known. I am not going to try to make any of the speeches that we hope will be made at the meeting of that association tomorrow, but they have made remarkable progress during this year, they have got on their feet, they show every indication of being by the end of another year on a self-supporting basis, and they are working out, and I think there is no impropriety in saying that we are trying at the agricultural college to assist them in working out some of the most difficult problems that they have. When we think that over 300 associations have been started up in one year—over 700 of them now picking up such managers as they can get, with a small volume at every station, they have had a tremendous problem to get that on an efficient operating basis. We make no apology for

our desire to serve in that connection. We do not think we are spending the money of all the state to benefit a certain class, when particular people are doing particular things, and you can bet your boots that we are going to give them all of the assistance we can, and nothing makes me feel better than for the co-operative shippers to say that we have been rendering them some real service in that connection.

There is one point I want to make to this gathering growing out of our experience there. I think I can state the nub of our experience in a very brief way. With relatively few exceptions it is our belief that you cannot have a really good, efficient local association unless that association is connected with some larger, more comprehensive, if you please, overhead type of organization. There are so many problems, the whole purpose of the co-operative shipping movement, the entire co-operative movement, is to start a process of improvement in the method of handling that business; the standardization or improvement of quality, and in time the equalization of shipments. That is what has made the success of all the organizations which have made conspicuous success in the marketing game. The local association, we have found pretty definitely, in most cases moves in the opposite direction, if it is left to its own unguided course, but welding those things into a strong regional organization, it is possible to work out in the handling and assembling of that shipping work a degree of standardization and economy, a limiting of unnecessary jobs, a greater economy in the handling of finance and insurance, a reduction in risks, and all of the general functions which are performed by central associations in their duties, can be worked out and are in process of working out today with this relatively young state association; but if the farmer, as we said a moment ago, is going to accomplish anything, it is by having a strong representation in Washington that speaks for the farmers as a group. It is going to give adequate financial service, and wants not merely that efficient service at the local bank, but that overhead organization which takes the surplus longer-time obligations of the different banks and funds them and lends them outside of the state based on Iowa agricultural security, and we propose to show that nothing can be better secured than that.

If you are going in to accomplish the considerable things, not the miracles which may be accomplished through the large-scale marketing under co-operative auspices, the very same thing applies and you have got to operate the live stock industry as one unit in the state of Iowa, or as one unit in the state of Minnesota, as Mr. McKerrow said. I wish I could have the reporter turn back and read again Mr. McKerrow's remarks about how the unified support of any agency is absolutely essential if it is going to render service.

And so it seems to me, gentlemen, that is the message, if I could bring you any message today, that I would sum up. I think we have scraped the bottom. The figures show that the readjustment, not as rapidly as we would like, very slowly in some of our principal products, yet is coming; that the outlook for the future is that the farmer is getting to the point where he can hold his own; that beyond that there is every reason for one who studies carefully to believe that the worst is over and

that conditions will improve, but absolutely that we must not become over-optimistic or impatient at the rate at which that moves, and if we are going to take our place in the reconstruction move and not get ahead of ourselves and precipitate new difficulties, we have got to do it through this representation of agriculture as an industry, whether through the agrarian bloc at Washington or in the state organizations here, that we have got to have bankers who will pass on the possible services of the War Finance Corporation to us, and in time pass that work on to the permanent agency which is in process of being established in this state, and that we must get back as a unit of these commodity organizations in the state of Iowa.

I thank you. (Applause.)

The President: Gentlemen of the convention, I have been requested to name a special committee here to consider a matter that is just a little outside of our general program, and I have agreed to do so, and at this time I am going to announce that committee, and then we have another number on our program that does not appear on the printed program which we are to listen to. This special committee consists of J. F. Eisele, Malcom; Fletcher McCormick, Montezuma; Otto Schugg, Ida Grove; Thomas McGivern, Marengo; Emil Federson, Des Moines; J. B. James, Blakesburg; Charles Mitchell, Chariton. This committee is to consult with W. C. O. Harker.

Now, further, we have a gentleman with us this afternoon whom we did not receive word of the possibility of his being with us until after the program had gone to the printer, on account of him being connected with the Department of Agriculture at this time, and of course there is a great deal of red tape to be gone thru with in getting those acceptances, and so he doesn't appear on the program; but at this time we are going to listen to Mr. C. L. Harlan, who was the statistician for the Corn Belt Meat Producers' Association at the Chicago yards and who is now in the employ of the Department of Agriculture in the Bureau of Markets. Mr. Harlan. (Applause.)

DEFECTS IN THE PREVAILING SYSTEM OF MARKET DISTRIBUTION

By C. L. Harlan.

Mr. Chairman and Gentlemen of the Convention: Mr. Sykes and Mr. Wallace, of this Corn Belt Meat Producers' Association, wanted me to come out and say a few words with regard to the problem of better market distribution of live stock, or as we have generally called it, more orderly marketing of live stock.

I think we can agree with what Mr. McKerrow said this morning, that the great benefit from co-operative marketing organizations, so far as live stock is concerned, is not going to be in the saving of commissions that

may result from such an organization. Of course, at this time, with the reduced prices of live stock, any little saving along the line that can be effected is very welcome, but if such organization is going to accomplish the greatest thing that it can accomplish it will be along the line of bringing about a better market distribution of live stock, and I want to consider several phases of this problem of better market distribution.

Perhaps the greatest weakness in the present situation in live stock marketing is that marketing takes place in almost complete ignorance of the supplies to be marketed. None of the factors in the industry, producers, railroads, market agencies or slaughterers have any adequate knowledge of supplies to come either in the immediate or more distant future. The only guide to probable numbers is the amount of the immediately past receipts and the receipts during similar periods in other years. Admittedly the securing of such information in an industry of such magnitude drawing its supplies from so widely extended and dissimilar sources would be most difficult. But in the lack of such information the whole industry works more or less in the dark and long view plans of handling either the animals or their products cannot be made. The risk element is thus made larger, but, unfortunately for the producer, the other interests either do not share in this risk or are able to shift it back upon him. If production is too large or is poorly distributed and prices decline the effects of this decline are borne almost entirely by the producer for his profits, alone, depend primarily upon price.

Another grave fault of present methods of distribution is that no organized attempt is made to accommodate supplies of live stock to consumptive demand for meats. Animals are sent to market, are slaughtered and the products are pushed into consumptive channels, and consumption is forced to follow slaughter, especially with perishable products that make up a large part of the whole. The controlling element in all the associated activities is the loading at country points and the resulting arrival of stock at the market. The railroads, stock yards companies, selling agencies and slaughterers must carry on their operations according to this volume. And as this is a changing one both as to days of the week, weeks of the month and months of the season, each must be equipped to handle a peak of supplies for these different periods which results in a labor and overhead cost unnecessarily high. To the extent that these variations in live stock supplies cannot be smoothed out in distributing the products the prices of these latter must fluctuate to bring about a demand that will absorb the total with a resulting unstable price range.

Another defect is that there is no method by which temporarily excessive receipts can be checked by concerted efforts of shippers but that this can only be brought about by price reductions. These occasional excessive receipts are due, in part, to developing conditions in regions contributing large supplies to seasonable movements which accelerate the normal movement, but in great part to chance in that too many shippers decided to ship on a given day or in a given week.

Daily distribution within the week is very faulty and makes efficient handling very difficult. The tendency to make use of Sunday to move stock to market and the prevalence of Saturday as a marketing day re-

sults in a much too large proportion of the supply coming at the beginning of the week. This is especially true of stock shipped and accompanied by individual producers and to considerable extent with that shipped through shipping associations that have set marketing days. The worst offenders in this respect are cattle shippers. In 1919 for ten leading markets 57.5 per cent of the total weekly receipts of cattle came on Mondays and Tuesdays.

To what extent these defects are susceptible of correction or improve is a difficult question. It is possible that they are inherent in the conditions under which live stock production necessarily takes place and hence cannot be greatly changed. It may be arguable that the present practice with all its shortcomings has developed as being the best adapted to meet all the confusing conditions involved. But probably the most ardent apologist for things as they are would not go this far. Practically all admit the desirability of securing better knowledge of supplies; also the evil effects of unequal daily distribution and of occasionally disproportionate receipts. It will be generally conceded that less fluctuating prices over short periods would be a benefit. Of the various interests associated with the industry those whose profits are least affected by these conditions are the ones most inclined to doubt whether present conditions can be improved. The situation is confused by the too prevalent tendency of different interests to lay the blame on some other. This lack of harmony, and the disinclination to give the whole question disinterested study, have heretofore prevented any whole-hearted attempts at improvements.

One thing is certain and that is that if any improvements are made the initiation of any activities leading to them must come from the producers. Equally certain it is that whatever beneficial changes shall be made will only come as a result of trial and experiment and not through any theoretically evolved plans deemed capable of immediate cure.

The central aim of any plan for the orderly marketing of live stock should be to move the seasonable and yearly supplies of the different kinds and classes of animals to market at such times and in such volume that the total net returns to producers as a class should be the highest possible and that this total should be distributed among producers of similar kinds in the most equitable manner. Admittedly this is no small undertaking. It involves a study and understanding of the live stock and meat and by-products industries in all their respects, beginning with the conditions of animal production and continuing through the marketing, utilization, distribution and ultimate consumption. The commodities to be considered are quite varied in character, are produced under many and dissimilar conditions and at greatly varying costs for each kind and class, are marketed in many diverse ways and have their values determined by a multitude of factors that control the consumptive value of their various products.

In view of this situation any attempt to formulate marketing plans to include all sections of the country and calculated to bring the entire movement to market within its scope is an impossibility. The most that can be hoped to include is the movement to the great central markets through which the supplies from the surplus production region go to the centers

of consumption and the movements within this surplus production region itself. And since with live stock as with other agricultural commodities the price at which the surplus can be sold determines the price in large part of the total production, and since price determination is the great element in any marketing undertaking, it follows that any successful solution of the price problem at the surplus markets will solve, in large part at least, the same problem in other regions far removed from these central markets.

The three kinds of live stock, cattle, hogs and sheep, while they now are marketed and no doubt will continue to be marketed through the same marketing machinery, yet the conditions under which they are produced, the products derived from them and the price determining factors are so dissimilar that each must be considered by itself and a separate study made of each. But there are certain general conditions, the greater part of which are found with all three, that can be outlined as giving the ground that must be covered in attempting to draw up plans for the more orderly marketing of all and of each. These general conditions will be considered under the four heads of production, market movement, character of the derived products and consumption.

Production. All products before they can be marketed must first be produced, and the conditions under which they are produced and the various factors controlling and influencing their production will play a large role in the manner of their marketing. It is also equally certain that nothing promising can be accomplished in the direction of the orderly marketing of a commodity that is not founded on fairly dependable information as to the amount of production. Hence production should be studied both as to its character and its amount.

The character of live stock production, meaning the industrial, economic and technical factors that influence and direct and control it, differs as among different kinds and different classes, but all of these find a place in one or more of the following classifications:

(a) As an activity in and for itself with other activities subsidiary to it and the enterprise controlled from the accounting point of view in terms of cost per head. As such it may be either a distinct enterprise, getting its income from the sale of live stock, or a separate activity in conjunction with other agricultural activities and requiring special skill, equipment and financing. Ranches or farms devoted entirely or mainly to producing one or more kinds of stock, pulp or cake feeding, are examples of the former, and farm feed lot feeding of the latter.

(b) As a side line activity in a general farming enterprise. As such it is conducted as part of a mixed farming scheme for the purpose of greater diversity and to utilize by-products of the other activities and to help maintain soil fertility. The production is carried on under a system of joint costs with the other activities and the costs of production and the profit and loss cannot be exactly determined separately.

(c) As a by-product of another industry which is controlled by conditions within that industry and little influenced by conditions in the live stock industry. As such it contributes to the profits of or to the reduction of costs in that industry.

(d) As a long or short period activity. In the first case the production of the marketable commodity is a matter of many months or years, and in the second the activity is for a limited period only.

(e) As a growing or finishing activity. In the one case it is the production of the raw material for the others, and in the latter it is the production of a commodity ready for consumption and with no other market outlet.

(f) As an activity in which profit or loss, high or low prices, react quickly to modify volume of production or are only effective over extended periods of time.

(g) As an activity the product of which fluctuates in volume considerably from month to month and season to season and which may be subject to more or less voluntary control.

If orderly marketing is the movement of the available supply to market in the manner calculated to bring the highest return, then there must be dependable information as to what the available supply is apt to be; which means that there must be such information as to the amount of production. This information should cover at least the following facts:

(a) The total numbers in the country both by states and by regions, the latter based upon conditions of production, kind of animals produced and the market disposition made of them. There is no fixed relation between total numbers and the yearly or seasonable marketings, but such information does indicate the trend of production in the country as a whole and in important production regions. Especially is such information needed with regard to the great surplus production regions the supply in which largely determines the price situation.

(b) The relationship between total numbers and marketings and inspected slaughter (which is surplus supply slaughter largely) should be determined, and it is possible that when the former is secured much more dependably than at present, a fairly close relationship may be found to exist.

(c) The relationship between total numbers in different states and regions and the populations of these and the consumptive habits of the populations should be determined as a basis of determining what states and regions should be considered as surplus producers.

(d) Wherever the conditions in the industry make it possible to determine fairly accurately the supplies to be marketed during a given period this should be done as a basis for the more orderly movement of those supplies to market.

Market movement. Over given periods of time of short duration the only way that producers can affect price is in the distribution—the movement to market—of their animals. But the amount of control that can be thus exercised is limited by conditions within and without the industry that are susceptible of only limited change. The movement to market at the present time is the result of—

(a) Regular and customary forces influencing and controlling the supply of animals and the demand for meats. Among the most important of these are the necessities of production and habits of consumption. The former may exist either in the industry itself, in the collateral industry of

which it is a part, or in the industry of which it is only a subsidiary. Live stock ordinarily goes to market when it is in the best condition to bring the highest return. But what this condition shall be is determined largely by the conditions of production such as the time of year when feed is more available, when stock is in best condition, date of birth and time for reaching a marketable condition—hence range cattle and sheep and pastured stock are in the best condition in the fall and food limitations for the winter make reductions of numbers necessary, so the great movement comes at that time. Pigs and lambs are born in the spring and reach a marketable age the following fall and winter and feed to put them in best condition is most available at those times. Such conditions as these determine in large measure when supplies must be marketed.

(b) The other factor, habits of consumption, acts to influence both movement to market and production. There are variable seasonable demands for meats and meat products and consumptive demand is not at all uniform throughout the year and preparation for market and marketing are influenced by this fact. There are also special periodical demands for certain kinds of meats as at Christmas and Easter time, and special seasonable demands from seasonable industries, such as summer hotels and resorts, that influence the market movement. In a general way necessities of production have influenced consumption and consumptive demands have reacted upon production, price being the influencing factor, until at the present time the two have, after a fashion, accommodated themselves to each other and the market movement corresponds roughly in its general outlines to seasonable consumptive requirements. But any scheme of orderly marketing must take both these into consideration.

Besides these ordinary conditions of production that influence the market movement there are also occasional forces within the production side that cause unusual movements. Among these may be enumerated climatic conditions which cause a shortage of feed and water and of winter forage that force stock to market either prematurely or in excessive numbers, the outbreak of disease and financial conditions that may cause an unexpected or unusual liquidation of flocks and herds.

Having in mind these conditions that control the market movement and hence limit the field of action in the direction of improvement, a plan for orderly marketing must consider what are the possibilities within these limitations. This consideration would concern itself with the possibilities of a better distribution of seasonable supplies, if once dependable advance information can be had as to those supplies; with the possibilities of securing a better distribution by changing methods of production in certain regions in order to prevent a piling up of supplies at certain periods; and with the possibilities of better correlating production activities to market demand in cases where such activities lend themselves to voluntary control and direction.

The foundation of any attempts at better marketing must be of dependable statistical material interpreted by competent industrial and economic knowledge and without these no trustworthy edifice can be erected. Statistical knowledge of market movement in sufficient detail to give necessary information as to different kinds and grades of live stock must be

secured. This information should show the monthly and seasonable movement from important reduction centers to market and the character and disposition made of these receipts; also detailed information of the movement from markets into other production or finishing regions to fairly indicate its effect upon near and remote future supplies. Only in this way can the comparative importance of different states and regions in the furnishing of animals for finishing and slaughter be determined. And until the market disposition of animals from different regions can be determined, it is not going to be possible to separate the movement of animals for slaughter from that of animals for return to the country or range, and without such knowledge a more orderly movement of each kind cannot be brought about. Until the character of the animals marketed is known, information of a dependable sort as to the relation between numbers in various regions and probable consumption cannot be secured. In a general way what is needed is the knowledge of the movement to the important surplus markets from different states during different months of various kinds and classes of live stock, according to the market disposition made of them, in order that the importance of each state in the furnishing of different classes of meat animals may be determined.

Character of the derived products. Live stock for slaughter is the raw material from which are manufactured products for consumption and the value of the raw material is limited if not strictly determined by the value of the resultant products. In addition the character of these derived products is a very important factor in determining the relation between supply and price. With perishable or semi-perishable products that must go into consumption rapidly and in volume corresponding to the market movement of the raw material, the current supply—daily or weekly—is apt to be more important in determining price fluctuations than is the case with non-perishable products, and the total supply or seasonable supply is less influential. With non-perishables and products requiring considerable periods of time for preparation which can be held in storage indefinitely, and which are so held from periods of heavy marketings to those of scant supplies, the total seasonable rather than the daily fluctuating supplies are of the most importance. Accordingly, then, as the derived products are made up more or less of perishable or non-perishable commodities, will short period distribution be of greater or less concern. Likewise the amount and the value of by-product raw materials, the consumptive products from which are non-perishable by nature, is an important element in determining the relationship between current supplies and price. The greater the proportion of the values of these to that of the live animal the less should be the effect of temporary variations on price, especially if the probable total supplies can be fairly estimated.

Likewise the character of the products in the matter of being reliably graded or standardized can affect the manner in which the raw material—the live stock—shall be marketed, and hence must be considered in a plan for orderly marketing. Progress in marketing must be accompanied or preceded by a better grading of the commodities to be marketed, and the more easily the derived products lend themselves to such grading the better can the raw material also be graded. As a general proposition the

most satisfactory markets are those where products are sold on consignment and after inspection, for in these the producer must carry all the market risk with no means of shifting or insuring against it; they are also the ones in which the tactical position of the sellers is the weakest, for they are forced sellers. Whenever accepted standards of grading are possible and established they make possible both different methods of marketing and methods of shifting the risk under prevailing methods.

Consumption. In the final analysis the desires of the ultimate consumer of meats and animal by-products and his willingness or ability to satisfy those desires determines the price of animals at the markets. In order, then, that a supply of live stock can be best marketed, dependable information must be had as to the desires and the willingness and ability to satisfy these of these ultimate consumers. The gathering of this information should include:

(a) A study of the statistics of consumption. This should include the monthly and seasonable consumption of different kinds of fresh and cured meats and meat products; the monthly and seasonable movement of meats and animals for immediate slaughter from the surplus markets and the killing establishments located there to the important centers of consumption; the importance of different consumptive regions and centers in taking surplus supplies and the markets from which and the routes by which this surplus goes into these.

(b) A study of the movement of non-edible by-products into utilization channels and of the finished products into consumption and of the various industrial and financial conditions that influence both demands.

(c) A study of the consumptive competition between different kinds of meats and between edible animal products and other kinds of foods. There can be no orderly marketing of one kind of meat animals without relation to the marketing of other kinds because the desire of meat consumers to satisfy their demands at the lowest price—to get the most for their money—results in a continuous competition among different kinds of meats and tends to bring about something of an equality of price as between similar qualities; in the same way other foods, and especially those of a substitutable character, compete with meats for consumptive flavor, and especially is this true with a large element of the population when economic and industrial conditions put food purchases on a subsistence basis.

(d) A study of the effects of both the exportation and importation of meats and animal products and of animals for slaughter on domestic prices.

(e) A study of the effects of weather conditions, of religious and social observances and customs on the demand for meats, and the comparative importance of such factors in various important consumptive markets; also of the relations between industrial and financial conditions and general tendencies of consumption and especially as between conditions in certain industries and consumptive centers and the demands for particular kinds and grades of meats.

That covers, in a general way, how the problems that might be determined in trying to get a better distribution of live stock and meat prod-

ucts, can be brought about. I assume that such a better distribution can be brought about. Now, what are the concrete methods by which this shall be attempted? That is, if we are going to attempt a better distribution of live stock, what are the methods by which the supplies of live stock can be better distributed?

Methods of control. There are two general methods by which the movement of live stock to market can be controlled—one is automatic control and the other is conscious or directed control.

Automatic control is the method that now prevails for the greater part of the live stock supply and it is brought about by leaving each individual shipper free to market his supply at the time when his own judgment, based upon such information or advice as may be available to him, decides to be the best, influenced, of course, by his individual financial and industrial situation. It is an almost perfect example of the "laissez faire" principle of action. The theory of such control is that with the number and diversity of producers of the various species of live stock and with the many prevailing individual farm practices there is always available a supply of all kinds of stock which insures a more or less steady flow to market; the production reservoirs from which market supplies flow, are so large and the springs of activity that keep them filled are so numerous and so certain that there is no reason to doubt but that a supply will be forthcoming. With such a source of supply about a certain number of producers will decide each day and each week to ship, depending, of course, upon the season. The speed control—the combined brake and accelerator—of this movement is price, assisted by the limitations on the possibility of transport. If the supplies come too heavy the price falls and will continue to fall until receipts are checked or the whole industry adjusts itself to a lower level; if receipts are light the price will advance and will continue to advance until the supply increases or until increased price of products checks demand for consumption. Thus price acts as a sort of float controlling the stream from the production reservoir into the market tank. The limitations on the number of stock cars and the time for their movement to and from market set the maximum limit on the size of the movement at a given time.

In the main this automatic control acts remarkably well, as a study of the receipts of individual markets and especially of the receipts of the dozen or more principal markets combined will show. In fact, during the seasons of the year when the receipts are small and when the adjustments between the movements of one season to another have been made it is improbable that any kind of conceivably possible conscious control could improve upon the present method. It is the situation that develops during the seasons of heavy runs, both in the spread of this movement over the season and also in the excessive one and two day and week runs, that shows up the weakness of this method and has brought about a general demand to seek for other methods to either replace it or supplant it. These other methods must take the form of some degree of conscious or directed control.

Conscious or directed control may be defined as any method that seeks to impose any systematic or organized limitations to the movement of

live stock from the regions of production to market or to check or divert its own movement while en route or to limit the offering of it upon arrival, all with the aim of bringing about a more even distribution of the available supplies. All such methods may be classed under three general heads of country control, reservoir method of control and market control.

Country control is any method that seeks to restrict loadings of live stock at country shipping points, either as temporary measures to relieve temporary market congestion or as a part of a worked out plan for the seasonable movement of some particular kind or class of live stock or from particular regions of production.

Such a method has many strong points to recommend it and also some admitted weaknesses. Among the former are: 1. That it keeps the surplus supply in the country where it can be carried the cheapest and where there is ordinarily less pressure to have it moved. 2. It keeps the supply in the hands of the producer who has a more vital interest in the price than any other factor in the industry. 3. It keeps the supply where it can be most easily diverted from one market or channel to another. 4. It keeps the supply where its depressing influence on the market is the last. 5. It is a method in which the semblance of outside autocratic control is smallest.

Among its weaknesses are: 1. That it keeps the supply where it is the most difficult to control its movements—to halt or start it. 2. To operate efficiently it requires much more detailed organization and hence probably less chances of success in accomplishments. 3. Unless the whole number of producers can be organized and brought under the control it must be attempted with only a part of the supply, which also reduces the chances of success.

There are a number of ways by which, either singly or in combination, such control could be brought about or attempted. All of these assume some organization of producers, or primarily of such, competent to secure and interpret available market information, and having secured the confidence of the great body of producers through demonstrated ability. The first of these, and the simplest, is by means of advice and requests to shippers to hold back or to forward supplies, but with no authority to enforce its decisions nor adequate means of bringing about concerted action. Another method, and one that has been strongly urged in some quarters, is that of our distribution control or transportation embargo. A third is by the building up of a unified or federated organization of producers that can control the flow of live stock to leading points and the movement out of them. And a fourth is by the organization of limited classes of producers along commodity or regional lines to market their supplies according to a prearranged program based on the knowledge of the number to be available and the past and probable future actions of the markets. None of these plans have ever been given a practical try out in the live stock industry. Argument for or against them must be based either upon their success or failure in the marketing of other commodities or upon their theoretical applicability to the actual situation in the live stock industry.

The reservoir method is the second possible method of control. This

includes any method by which supplies of live stock after being loaded at country points are assembled at points en route in volume either for diversion or holding. This may take place either at feeding stations adjacent to the market or at concentration and diversion points located at strategical points giving access to two or more markets. Each of these kinds of points are at present in operation, but only for the use and convenience of individual shippers and not as part of an organized method of market movement control. The theory of the reservoir method is that the stream of live stock as it comes in uncontrolled volume from the sources of production should be gathered in these intermediate reservoirs and fed out from them into the market in so near a uniform supply as knowledge of conditions makes possible, both for flow to individual markets and for distribution among markets.

The near-by feeding station or reservoir has both advantages and disadvantages. Among the former are: 1. Stock can be ordered in on short notice and thus reach any desired markets. 2. Shrinkage after reloading is at a minimum. 3. Care en route can be diverted to them readily. The surplus supply is concentrated in a few points and can be more effectively handled. 5. The necessary equipment on a considerable scale is now available. Among the disadvantages are: 1. Unloading for holding purposes only delays the market movement. 2. Present charges, at least, are high. 3. Difficulty or impossibility of diverting stock to other markets. 4. The time that any great volume of stock can be held is limited. 5. Such supplies are apt to be counted as a part of the market supply and have the same effect as if at the market. 6. Difficulty of determining what stock shall be thus diverted and what shall have priority of movement out. Concentration and diversion points also have favorable and unfavorable points. For them are: 1. Stock can be distributed to various markets and thus relieve the congestion at particular ones. 2. Hogs can be double-decked and save transportation expense and be shipped around the open market. 3. Such points can be developed as a part of a state-wide distributing plan. 4. Decentralized control operating from these points will be much more effective in controlling local loading activities. 5. Supplies at these points will not act as a weight on the market. 6. Make possible the grading of hogs for shipment to the most favorable markets. Against them are: 1. The necessarily limited capacity of such yards. 2. Their limited utility as points to which to divert stock en route after the probable run has been determined. 3. Delay in getting stock to market after it has been ordered shipped.

The weakness of the reservoir method by itself is that it could only be useful for emergency purposes to handle temporary over-supplies and could not be utilized to equalize supplies over longer periods. It is doubtful if it ever could accomplish much in relieving the cattle situation because the expense in food and shrinkage would probably always affect any increase in the price, especially with fat cattle and range cattle.

The third method of conscious control is that of bringing about a different handling of the supply after it reaches the market, either by limiting the numbers that could be offered on a given day's market or by developing some program of concerted action for holding a part of excessive re-

ceipts off the market, both for the purpose of relieving the market pressure due to disproportionate receipts. In either case the attempt would be to make the necessary re-distribution of the supply after it reaches the market rather than at loading points or en route. This would involve the minimum of transportation expense and would eliminate the necessity of added equipment in the scheme of marketing, except at the markets themselves. The first method of limiting the numbers to be offered would necessitate an agreement among all the interests at the markets by which seasonable daily maximum limits to the numbers of different kinds of stock that could be offered for sale out of first hands should be established, together with practical means of securing such limitations. Such a method would more or less automatically limit the numbers offered for sale on a given day's market; it would not require any agreement as to action to be taken in particular situations; the control would be centralized at the markets; and means would be had for relieving a situation that had developed. On the other hand, it might involve expensive and even impossible (under present conditions) changes in market equipment, and certainly considerable changes in handling at the market. Also it is perhaps debatable whether a supply that has reached the market if held off the market would not still have the same depressing effect. The conscious control method of securing temporary agreements for carrying excessive receipts over would make possible the taking off the market of temporary over-supplies and would lessen the dependence upon traders and speculators in carrying over this surplus. Such a method, to be workable at all, would require the approval and loyal support of all the different selling agencies as well as the backing of all the established exchanges; admittedly these would be difficult to secure. Unless accompanied by reduced country loadings it might have the effect of simply piling up the supply instead of equalizing it. Finally, to be equitable, it would require some sort of pooling by which the expense and risk of carrying over would be shared by all the stock benefiting by the action.

If it is accepted that the present automatic, price regulated control does not work satisfactorily and that there are promising possibilities of improving upon it and that a better method of control will result in returns to the live stock industry much exceeding the added costs of some different or supplementary method of control, then it appears plain that these changed methods must be along the lines indicated under the name of conscious control. As the name implies, this must be a thought-out, carefully planned action to bring about a desired end. Not only must the adequacy of the means to bring this end be considered, but also the ultimate value of the end itself must be critically examined.

Both ends and methods having been decided upon, organization adequate to put the former into practical and efficient operation are an absolute essential. The size and character of these organizations will depend largely upon the kind and amount of control that is decided upon. Certainly the type of organization will have to differ for different kinds of live stock. Both the kind of control and the type of organization to make possible that control will be considered in the separate discussions of the problems involved in the marketing of the different kinds of live stock.

I think that anything that will ever be undertaken in the way of better distribution of live stock from country points to the markets will have to involve one of those three methods. Personally, I think that control at the country shipping point is the most promising, although in certain emergencies, perhaps, either limited control at concentration or feeding points operates quite successfully, especially at given times of the year—especially in the lamb-feeding industry might it accomplish some benefits—and it is possible that something might be obtained by a better distribution of the stock after it reaches the market. I think that anything that is done in the way of better market distribution must be done along one of those three lines, but before anything or a great deal in that line of more orderly marketing can be done, it must involve an agreement between all of the factors from the producers through past the live stock market to bring these about.

Relations Among Different Interests In the Industry

There is little possibility of any method for the more orderly marketing of live stock attaining great success that do not have the sincere and co-ordinated support of all the interests in the industry; the probable success will be the degree to which such support is secured. This co-ordination must be from the producer at least through to the retail distributor, including the railroads, yard companies, selling agencies, government agencies, and packers and slaughterers both as such and as wholesale distributors.

Each of these factors has a direct interest that the supplies of all kinds of live stock should move to market in as orderly manner as possible for the efficiency with which each can perform its respective function is greater or less as the distribution of the supply is good or bad. There are relationships between these different factors where the points of interest are different and even antagonistic, but as regards the movement of the live stock supply there are no conditions that can justify serious disagreements; it is a matter of getting all to work harmoniously within their respective spheres to bring about improvements.

In studying conditions and devising plans for bringing about more orderly marketing and putting these plans into operation, the relation of all these interests in the plan must be considered. Where there are apparent antagonisms these should be adjusted so that the full support of all will be secured for such action as may be decided upon.

As among the different interests the producers are the most vitally concerned. If better market distribution is to be of any value to them, it must be reflected either in higher returns or a more equitable distribution of these. Without this they have no sufficient interest to justify the expenditure of energy and money necessary to change the present methods. Their profits alone depend upon the price paid for live stock; the others make their profits without regard to this price and their interest in better distribution is in the possible savings in operating expenses resulting from a more even volume of business. Consequently this situation of the producers is entitled to especial consideration in whatever joint or associated activities may be undertaken to bring about more orderly marketing, it being recognized that whatever makes live stock production more

permanently profitable tends to maintain and increase the amount of production, and the interest of all the other factors is in keeping this volume steadily increasing, for it is upon the volume and not the value of the production that their profits are based.

In order that all these situations may be intelligently met, the live stock producers must maintain a permanent organization with authority to speak and negotiate for the whole industry. Such an organization must be made up of men capable of commanding the respect and confidence of the representatives of the other interests; it must employ trained and experienced advisors who understand the live stock and its associated industries and who can furnish its representatives with full information bearing upon concrete questions that must come up from time to time for consideration and decision; and finally it must be in a position to insure that decision reached or agreements made will be carried out in the same good faith by it as it will expect from the others. For unless the live stock producers, through their accredited representatives, are willing to approach all these problems with open minds and without prejudging them, to recognize the mutual and interrelated interests involved, and concede good will and honest intentions to the men who represent these related industries, there is little to be hoped for along the line of market improvement.

The President: That concludes our afternoon program, and if there is nothing further, we will stand adjourned until the banquet, which will be at 6:30.

THE BANQUET.

The President: Ladies and gentlemen, we appreciate your presence here this evening on this auspicious occasion. As we sat here and visited and talked, it occurred to us that about eighteen years ago just about this time—I wouldn't say exactly the date—there was a bunch of two or three hundred straggling farmers and stockmen scattered over the state of Iowa, gathered in the city of Des Moines to consider vital questions that were then confronting them, similar to those that are confronting us today as farmers and live stock feeders and producers. Out of that aggregation of farmers and stockmen—and I assure you we were a green bunch at that time, inexperienced, without a leader largely, no one having any experience along the lines of work that seemed necessary to be done, but out of that aggregation of men came what is now known as the Corn Belt Meat Producers' Association.

Tonight, we are holding, about, our twelfth banquet, and we are holding at this time our annual meeting, and with us have

joined to celebrate the Federated Co-operative Shippers of Iowa, and we certainly welcome you to our midst.

After this organization had been formed and started to function, the man who had been elected secretary of the Corn Belt Meat Producers' Association became ill, and found that it was necessary for him to leave this rigid climate and go to one more mild to recover his health, and he handed in his resignation to the board of directors. The board of directors then began to look around for a secretary for the Corn Belt Meat Producers' Association to fill the vacancy that had been made by the resignation of J. J. Ryan, who was the first secretary of this organization. In their scrimmage, they ran onto a man who then wasn't as old in years as he is now, who with his father and his brother and some of his relatives, was connected up here on Eleventh and Walnut streets, I believe, publishing what was then and is now known as Wallaces' Farmer, and they decided after they looked this man over that he would make a pretty good secretary if he would accept the position, and so it was offered to him and he accepted the position, and for about sixteen years that gentleman filled that position with this organization as secretary.

After a while we had a national election, and, you know, sometimes those national elections change the political aspect of things in Washington, and it becomes necessary to make some changes. Now, of course, I happen to belong to the party that had to give way (Laughter), unfortunately, but what I was going to say was this, that the President, in looking around over this great United States, decided that he needed a secretary down there—in fact, several of them, just as the Corn Belt Meat Producers' Association needed a secretary some sixteen or seventeen years ago, and so he began to look around for secretaries and finally located one out here in Des Moines, in the very spot where the Corn Belt Meat Producers' Association located their secretary when they needed one. (Applause.) Well, of course, we were loath to give up our secretary, because as an organization we felt we needed him, and we have never changed our minds so far as that is concerned, but then, of course, we felt this way about that, that possibly he could serve us in a broader field if he went to Washington. We just had faith enough in our secretary to believe that he wouldn't go back on us if we let him go to Washington, if we gave him a leave of absence and permitted him to go to Washington and help us there; and so we have gathered here tonight, I feel, to pay a tribute to the man

who acted as secretary of the Corn Belt Meat Producers' Association for sixteen years and then was called into the cabinet of the President of the United States to become Secretary of Agriculture, and I with pride tonight take pleasure in introducing to this audience our old secretary, the Hon. Henry C. Wallace, who is now Secretary of Agriculture of the United States. (Applause, audience rising.)

ADDRESS OF HON. HENRY C. WALLACE, SECRETARY OF AGRICULTURE

Mr. Chairman, Friends: Mr. Sykes has told you of the birth of this organization and its age. I have attended every meeting and every banquet, and I always enjoy them immensely, but I don't think I ever attended a banquet before under circumstances of—well, of a certain embarrassment. You know, I have talked to you at different times at the banquets in an informal way, but when I come with the expectation on your part that I am going to make a speech, I feel just about as I would feel if I got up before my own family and undertook to make a speech. (Laughter and applause.) I simply cannot do it! (Laughter.) All I can do is just talk informally, feeling that there is in this audience a bond which will not expect anything more than that, and, in fact, I suspect you yourselves would take offense if I undertook to orate before you.

I am also under a little bit of embarrassment to know just what to say to you. Of course, you ought to know what they are doing down there to help in this period of agricultural depression, and I shall say something about that. Perhaps you may be interested, to begin with, in the sort of life we found down there; and what I am saying now I am not saying for the purpose of being quoted or reported, and if there are any newspaper men here I don't expect them to report any of the personal matters. It is different from the life of the secretary of the Corn Belt Meat Producers' Association. (Laughter.) It is like being torn up by the roots and transplanted into an entirely new field where the soil is somewhat different and the climatic conditions are not wholly the same. And yet it is a pleasant soil, and I can well understand how, under normal conditions in the country, there would be a lot of enjoyment and some considerable leisurely pleasure in it. That is, the government has built up there a pretty well organized machine in each of the departments. There are a lot of splendid men who have grown up in government service mostly under civil service now. They are well trained. The machine will run right along almost of its own momentum, except in unusual times. I think the expectation in the past has been that cabinet members would not work themselves very hard, that they would comport themselves with dignity, that they would not keep abnormally long hours. The government employes go to work at 9 o'clock and quit at 4 or 4:30, so that the hours are not severe.

But these are not usual times. When the present administration went into power, we were just coming out of our war experience, and wholly without regard to what administration might have been in power during the war, there was bound to be a great deal of disorganization. War is a wasteful enterprise, it tends to disrupt orderly ways of doing things, and

there was bound to be disorganization, a great deal of rebuilding that had to be done, and that threw a great deal of work upon the administration, and especially so in view of the fact that it was a different political power than the one that preceded it. Then, we were in a period of severe agricultural depression, and that threw an added burden upon those in the agricultural department who take the business seriously, and I want to say that most of them do. So that it has been strenuous times, both in congress and the administrative departments. And yet there have been many things of interest.

Perhaps you would not mind if I told you one or two experiences that are of more than usual interest. For example, one of my most interesting experiences was going down with the fleet to see them experiment with aerial bombs in sinking battleships. We took over from the Germans, as part of our share, certain submarines and cruisers and one battleship of the first class, the understanding being that those would all be sunk. So they were used as targets for the experimentation in aerial bombing. I was invited to go down with a group of about 300 government men, mostly army and navy men, to observe that last experiment on sinking the battleship Oesterfriesland, which was one of the German battleships in the battle of Jutland. We went down on a navy transport, reaching Newport News in the evening, and the next morning we wakened seventy miles out at sea, and when I went out on deck and looked about there was a fleet of eighteen battleships and destroyers and smaller craft. Well, to a land-lubber who had never been out at sea before, it was a very interesting sight, and I was anticipating an interesting experience, because when I wakened in the morning in my berth the old ship was going up this way and down that way and I lay abed for about ten minutes debating whether it would be entirely safe for me to get up. The sea was too rough to bring out the airplanes that morning. You understand these vessels were to be sunk by land airplanes. That is, they were to have a considerable share in the experiment, the idea being to determine whether the airplanes from land could successfully defend the coast from attack by battleships, and when you remember we were seventy miles out at sea and that those land airplanes cannot land on the water and float, you can see they were wise in not inviting the boys to come out in a rough sea.

With regard to what we are doing to meet this general depression, especially as it relates to agriculture: There is a feeling in a great many parts of the country that congress has not done much. I don't think that feeling is justified, so far as agriculture is concerned, and I am speaking now of congress as a whole, without regard to political parties, at all, because in agricultural matters there are no party lines; both the democrats and republicans are alike interested. When you look back at the legislation passed by congress since March 4 it is a most creditable record so far as agriculture is concerned. First was the emergency tariff. I know that some people doubt whether the emergency tariff has been of much benefit to agriculture. We had a very unusual situation. Ordinarily a country which has a large surplus is not helped by a tariff, because the surplus itself is capable of defending the country from importations of the same sort of stuff, but we had a situation which was almost unprec-

edented last spring. The case of wool is, perhaps, the most easily understood and illustrated. We had an immense surplus of wool in this country. Many of you know that from your own experience. We had great stores of it piled up. It was at a ruinously low price, and notwithstanding that, wool was coming into this country at the rate of thirty to forty million pounds a month. The United States was the only country that offered a market at any price for wool; it was the only country that had money to pay at any price, and much of that wool was brought in and bought and simply stored away by the woolen mills against the time when they could use it, and much of the rest of it was brought in and our credit was applied to it, and it was shipped on overseas on a basis of credit purchase. When you have conditions of that kind, a tariff of any sort helps just that much. At any rate, congress promptly passed the tariff on the theory that it would help.

Then it passed three or four laws tending to make better credit conditions. For example, it passed a law that permitted the joint stock land banks to raise the rate of interest one-half per cent to make their bonds more salable. It passed another act which made it possible for the farm land banks to increase their capital to the limit fixed by law, making \$200,000,000 capital available for farm land banks, and within the past three months those farm land banks have marketed \$60,000,000 worth of bonds at par. Captain Smith, of this state, as a member of this institution, tells me that they have every expectation of being able to market at least \$12,000,000 worth of those bonds each month. Well, that has had a most helpful effect in relieving the situation of many farmers who were not able to get loans on their farms at a fair rate of interest. Then the amendment to the War Finance Corporation act which makes it possible for the War Finance Corporation to extend its loans both for export and for agricultural production purposes at home to as much as \$1,000,000,000. Many people thought that that money should be made available to the individuals, and that there is a good deal of complaint that it is not reaching the individual farmer. Well, when you consider the number of individual farmers who would like to avail themselves of that, and the difficulties of setting up an administrative machine sufficiently efficient to administer that fund and deal with the individuals, you will see how utterly impossible it would be. Not only because of the difficulty of setting up the mechanics of such an operation, but also because of the lack of knowledge of that individual's other borrowings. If you are going to reach the individual farmer, it must be through a local institution which is thoroughly familiar with his condition, with his other borrowings, and with his proper claims for credit. Now, it was to be expected that it would be rather slow work in creating the machinery necessary to deal through the banks, even, and I have been astonished with the rapidity with which that has been created. If you could be in the office there a little while and see the great number of applications that come in, and realize the necessity of care in passing on all of those applications—because when all is said and done the purpose is not to make a present of the money, but to loan it intelligently and upon terms which give fair promise of its return. If you could come in there and see all of those operations which must be gone through

before the loan can be finally acted upon, I believe you would agree with me that it is remarkable that we got into action so quickly. And let me say that Iowa has received more War Finance money than any other state in the Union except two—one being Minnesota, where a large loan was made to a cooperative concern for the purchase of grain and the other to a southern state where there was a similar large loan made for the purchase of cotton. With the exception of those two large loans, Iowa has had more War Finance money than any other state—something over \$9,000,000 to date, and one reason for that is this, you have had here in Iowa an excellent sub-committee which has put in long hours passing upon the loans that come up from the banks of the state. Now, the operations of that War Finance Corporation are more helpful than one is disposed to appreciate at first. Making that money available tends to relieve and does relieve the immediate stress on the local banks all over the state—the banks that take advantage of it—and that in turn relieves the situation so far as the farmer borrower is concerned.

In addition to these laws dealing with credit, congress passed two laws of an unusual nature—one law bringing the packers, stock yards and commission merchants under the supervision of the government, and the other the law bringing the boards of trade or future exchanges under government supervision. These laws give more power to the supervising agency than any laws ever have except when passed in time of war. They make it possible for the supervising agency to go into the packing business, for example, to the books of the packing company, and learn all about what they are doing. They give power to the supervising agency power to practically fix charges by the stock yards and by the live stock commission merchants. The law dealing with future trading gives similar powers over the operators on the boards of trade. There has been talk here and there that those laws do not go far enough. One common expression with regard to the packer control law was that its teeth were pulled before it became a law. I want to say to you, as the party who is responsible for administering those laws, that there is as much authority there to begin with as I care to have lodged in my hands. We have got the authority to go in and study the whole business, and that is the first thing to do. We hear a lot of talk about the iniquitous practice by the packers or the commission merchants or the board of trade operators, but we are short on definite, reliable information concerning the operations of all of those agencies. We have now an opportunity to go in and inform ourselves thoroughly as to just exactly what is going on, and that is the first thing to be done, and then if we find that some things are being done which should not be done and which these laws do not reach, I think it will be very easy to get such amendments as we should have to make them fully effective. Both of those laws are being held up in part by appeals to the court. They are being attacked on the ground that they are unconstitutional. Whether those attacks will be successful, of course, is something for the future. The theory of the attacks is that the operations of the commission merchants are not of an interstate character, that they are intrastate, and therefore congress has no power over them. Those

cases are being advocated by the supreme court, so that we should know within a short time whether those laws will stand as constitutional.

I mention those things to justify the statement I made that congress during the past nine months has made a very unusual record as far as undertaking to serve agriculture is concerned. None of those laws passed is intended to give the farmer an unfair advantage over other classes of citizens, but all of them were passed with the recognition of the great outstanding fact that prosperity and the very life of the United States depends upon the agricultural industry, and if our agriculture doesn't prosper the nation cannot prosper. They were all largely addressed to the immediate emergency, and if congress has not passed more legislation which some have advocated, it has been because the justification for that legislation could not be made. In times like this you always have a lot of freak legislation suggested. In these periods of stress there are people coming forward with remedies which experience shows are not successful, which are likely to make conditions worse than they are at the present time.

There is another thing that congress has done which to me is full of promise so far as agriculture is concerned, and that is they have appointed a committee of ten members, five from the senate and five from the house, and that committee has been sitting for about five months just inquiring into agricultural conditions. They have given everybody who wants the opportunity to appear and talk about agricultural conditions, an opportunity to be heard. They have employed a number of competent statisticians and economists, they have drawn upon our department for a great mass of statistical material, they have reached out in every direction that any of the members could think of, or that anyone could suggest to them, for information that would throw light on our agricultural difficulties and would indicate some practical remedies. That commission has not yet made its report—I think its first report will be made by the first of January, and I am very hopeful of the suggestions which will grow out of that report—it is a thoroughly constructive piece of business, gone into without prejudice simply for the purpose of inquiring into and getting real facts as to our agricultural situation.

Now I want to say a word to you about the Department of Agriculture. We employ over 18,000 people in all. The work is divided into four general lines: First, what we call the scientific research—all of the experimental work, the gathering or search for improved plants and animals, methods of breeding and everything of that sort. Second, the extension work in which the effort is to take what we have learned from this scientific research into the country, to bring it into the farm home, to put it within the reach of every man that wants to profit by it, and that, of course, is not only direct, but in co-operation with the various agricultural colleges and experiment stations and through the county-agent movement. Then, third, we have what we call the service work, of which the crop estimates and marketing work is an example, and then we have the regulatory work. We administer some thirty or more regulatory laws—meat inspection, the food and drugs act, the migratory bird act—in all over thirty of those regulatory laws. And then in addition to that regulatory

work, it has gotten to be a habit of putting the Secretary of Agriculture on commissions of several sorts. For example, there is a federal power commission which has charge of all of the navigable streams of the United States. No man can build a dam for water power purposes without first getting the permission of the federal power commission, and they made the Secretary of Agriculture a member of that commission. The other two members are the Secretary of War and the Secretary of Interior. And then there is the national park conservation commission; there is the commission which deals with the purchase of forests. We have bought in the last ten years over 2,000,000 acres of forest land—bought and administered by the government; and there is this commission and that commission that they have gotten the habit of putting the Secretary of Agriculture on, so that you see if you do justice to your own administrative work within the department, and do even partial justice to the work that is expected of you as a member of these various commissions you haven't got a great deal of time to waste, and you haven't a great deal of time to spend in pleasure.

Of course, under conditions which existed last spring, and which still exist in large measure, it was perfectly natural that we should turn every effort of the department to relieving this financial stress, and toward trying to find and enlarge our markets for this great crop surplus, and toward improving our marketing facilities. We sent some cotton experts overseas to see if we could send more of our cotton over there, to see if we could enlarge the foreign outlet for our cotton. We sent our experts over there to enlarge the outlet for our meats, and also others for the outlet of our grains. We have done about everything that we could do for ourselves, or that anyone could suggest to us that sounded at all practical to try to relieve this situation. Some of that work has been helpful, none of it has been as helpful as we had hoped it might be. I think in looking into the future we will get a great deal of benefit from some of the work we have done during the past six months, especially in foreign fields, but it is not going to come quickly. You know, when we first got into this real agricultural depression, it was common to hear people say, the only trouble with us is that the people overseas aren't buying as much as they have been, and the thing for us to do is arrange credits for them so that they can continue to buy. We found that wasn't true. Those people were not slackening in their buying because of lack of credits. They were buying what they needed, but we were in a period of falling prices, and instead of laying up a surplus as they had in years past they were buying from hand to mouth just as we are, because of that period of falling prices, and the further extension of credits to them offer no prospect of enlarging our sales. We found some other conditions which we think can be improved and which will enlarge in time our foreign outlet.

Then looking at the conditions here at home, I found this in the department, and I am not saying this by way of criticism but simply stating the fact as it developed, and it applies not only to the Department of Agriculture but to our various agricultural colleges and other agencies that have been looking toward the improvement of agriculture: The major emphasis during the past forty years has been to improve methods of

production, to increase production, to cheapen production costs, to grow better crops and more of them. The emphasis has been put upon production. Now, I am convinced that if during the past forty years we had put even 25 per cent as much time into studying the economic processes that affect agriculture, the influences that affect production, and especially that affect prices, if we had spent even 25 per cent as much time in studies of that sort, we would have rendered a far greater service to the agriculture of the United States. I do not mean to say by that that we should lessen in any way our efforts along production lines; I don't mean to say that we shouldn't continue to improve our varieties of crops and our breeds of live stock, and to cheapen our costs of production, and to study better cultural methods, and studies of breeding, and all that, but I say, in addition to that we must give more attention to what we call agricultural economics—the business side of farming, and if we had given more attention to that we might have anticipated part of the trouble that has come upon us and might have avoided it in part. So that, without lessening in any way the work of the department in productive lines, I have been trying to strengthen its work in economic lines during the time I have been there.

There are a splendid lot of people in that department. There are men there who have devoted their lives to unselfish service for agriculture. There are men there whose services can hardly be estimated in dollars and cents—running into millions and millions and hundreds of millions of dollars. Dr. Pearson here, who is going to speak to you later, can tell you something of that, because he himself was in the department for two years, and I think he will support everything I have said in commendation of those men.

Well, I don't want to tire you by talking of the department or of its work. I have found it tremendously interesting, and I think very much worth while. Looking into the future, it seems to me that when we get through this period of stress and depression, and it is my belief that we are through the worst of it and that there will be a gradual improvement from now on, I think we shall find ourselves at the beginning of an entirely new era in agriculture in the United States; we will find that we have come to a time when under normal conditions consumption has practically overtaken production, and we will find that we have problems of foreign competition which have not bothered us so much in the past, but which are likely to bother us a good deal in the future.

Let me suggest just two or three things which the farmers of Iowa should think about with considerable care. We loaned those foreign countries some eleven or twelve billion dollars. That is, we say dollars; in fact, we loaned it in the form of commodities, in foodstuffs and ammunition and implements and machinery of all sorts. There is not enough money over there to pay even the annual interest charge on that money, and it has got to be paid back in kind; it has got to be paid back in commodities of one sort or another. It seems to me now that that means that our manufacturing interests are coming into a period of probably the most severe competition they have ever met, because conditions overseas, wages overseas, are much lower than here, the rate of exchange is

to their advantage—this is a good country to sell in and a poor country to buy in, so far as those European nations are concerned, and our manufacturers are going to meet that very fierce competition. Now, to meet that they have got to reduce their production cost to the very lowest possible point, and a very considerable part of their production cost is wages, and wages must be related to the cost of foodstuffs, so that our manufacturers, in order to meet that competition, are going to demand of us, and very properly, too, that we feed their workmen at the lowest possible cost. More than that, they are going to buy the food for their workmen wherever they can buy it cheapest. Now, to the south of us is developing a wonderful agricultural empire—Argentina. Uruguay, Brazil—raising grain and live stock, and, under present conditions, being able to lay their products down on our eastern coast at a lower cost for shipment than we in the corn belt can lay our products down.

Now, you take those three things and connect them up and I think you will see that they present problems which the farmers of the corn belt have got to consider, and when I say farmers of the corn belt I mean all citizens of the corn belt. We have got here the highest price land, everything considered, in all the world; we have got also the most intelligent farmers; we produce more per man than any other farmers, taken on an average, but we have got to cheapen our production costs or increase our yield if we are going to meet the competition that is coming in a very short time. I am convinced of one thing that Iowa and states like Iowa have got to go about it systematically to study their agriculture from the business side. I am convinced that if Iowa will do that, even if we can not cheapen our production costs so much, we can cheapen our marketing costs and compete with our neighbors to the south of us on much even terms than we thought. The day before I left Washington, Harold Powell, manager of the California Orange Growers, was in my office. Oranges are a luxury, but Powell told me that they sold one hundred million dollars worth of oranges at a profit. They have done that first by cooperative organization, by improving varieties, by careful grading their products, by cheapening their costs all along the line. They own their own lumber mills out in the national forest and make their own boxes. They have put the orange business on a sound business basis, and they have studied the thing as the conditions demand, and they study the conditions in every city day by day. They start their cars from the west and keep control of them and deflect them from city to city. In other words, they have applied modern business principles to the marketing of an orchard crop.

Now, I am convinced that if all the agencies in Iowa which are working for agricultural improvement will come together and study that marketing problem alone—and when I say that I am not speaking of some large effort to all at once overturn our system, but get right down to the business and study the thing from the bottom—the grading of our products, the marketing of them in a thoroughly businesslike way—I am satisfied that we can make an enormous saving in the marketing of Iowa's crops, and I am satisfied further that that sort of study will show us we are growing too much of some crops and too little of other crops, and we

can bring about an adjustment in production which will result in a very pronounced material advantage to the farmers of Iowa.

In the Department of Agriculture it is my ambition that we shall be able to cooperate with not only the agriculture colleges and experiment stations in each state, as we have been doing for many years, but shall be able to cooperate with the various state marketing organizations and other organizations which are studying the business side of farming so that gradually we can work out a national agricultural policy—first a state policy and then a national agricultural policy that will result in putting our agriculture on a thoroughly sound business basis. We have gotten to the time when, if we hope to maintain the standard of living which we have been demanding for the people of the farm, and maintain the fertility of the soil, we have got to have a definite agricultural policy and all work toward it, and it is my ambition that the national Department of Agriculture shall be able through cooperation with these various agencies and the various state organizations to make same real progress toward working out that enduring national policy during the next four years.

I cannot tell you how much pleasure it is to me to have the opportunity to meet with Iowa people even for a short time. There is one difficulty about these short trips, in one way they are an aggravation—the first day I usually just loaf around, thinking I will get down to some of the things I ought to do the second day, and then before I realize it evening has come and train time is almost here. I have missed the opportunity to meet with you here. I had expected to spend most of the day here with you, and this contact tonight, although I have done most of the talking so far, makes me feel as though I was among my own family again. I have to leave in a few minutes on the way back to Washington, and I hope that any of you who come to Washington will not fail to report to the Department of Agriculture. You know there is such a mass of administrative work there that one can be entirely immersed in it without realizing conditions unless you people out in the country keep me in touch with actual conditions. I cannot get out often enough to get that knowledge, which I must have, and if because of that mass of administrative work I gradually lose touch with what is going on in the country, it will be your fault and not mine, because it is your job to come to see me. I would like to have you to write me now and then, and that is the only way I can keep up to date on what is going on out in this great western country, and what is in the farm mind here. Of course, I am hoping to get out here more often in the future than I have in the past, but until that time you have got the task of keeping me informed. I thank you very much! (Applause.)

The President: At this time I think I will entertain you by reading you two letters which I have in my possession, which I know will both interest and disappoint you. The first is dated at Chicago, December 6, and reads as follows:

Dear Mr. Sykes: The Interstate Commerce Commission has assigned for hearing at Washington the case involving the general reduction in

freight rates convening December 14. I feel that I should be there at the very first day, or possibly the day previous, for conference with other shippers.

I regret this exceedingly, as it will deprive me of one of the cherished events of the year, my meeting with my old friends of the Corn Belt Meat Producers' Association.

Cordially yours,

CLIFFORD THORNE.

(Applause.)

I don't think it is necessary for me to take your time in going into an explanation of this matter. You are aware that the Interstate Commerce Commission has determined, on its own motion, to make a general investigation of freight rates as a whole and to find out whether or not these freight rates can be reduced under existing conditions, and they set the date for the opening of that hearing and investigation for December 14, and this is why Mr. Thorne is absent from this banquet tonight.

The second letter is dated at the State House, Des Moines, Iowa, December 13, 1921. This letter I received after we adjourned this evening upstairs.

Dear Mr. Sykes: I regret exceedingly that I can not attend the banquet tonight, to which you were kind enough to invite me. As you are aware, I am threatened by a serious situation created by the strike of packing house employes at Sioux City, and it may be necessary for me to order the national guard there to protect life, maintain order, and preserve property. A committee of officials and citizens of that city has just notified me that it will arrive in Des Moines at 6:30 this evening to discuss the subject fully with me. I know you will agree with me that my first duty is to confer with them.

I wish for your meeting the most complete success, and I want you to know how deeply I appreciate the courtesy implied in your invitation.

With personal regards, I remain,

N. E. KENDALL.

This explains why our governor is not with us this evening.

In emergencies of this character, men who are in charge of gatherings of this kind are put to their wits' ends sometimes to meet the situation; but, fortunately, we have in the state of Iowa several men to whom we can always appeal to fill just such an emergency and such a situation as confronts us this evening. As I came down from the convention room this evening, about 6:00 o'clock, or 6:15 I believe it was, to be exact, I met in the lobby of the hotel, among other men, one man to whom we all like to pay honor and respect, and delight to listen to, a man who has been a leader among us since

he came west; and in this regard I wish to say that you people are exceedingly fortunate tonight—it just occurred to me as the Secretary of Agriculture was talking to us that tonight we have two men as honored guests of this banquet who have been in the Department of Agriculture, one as the Secretary of Agriculture, to whom you have listened, and the other who has been Assistant Secretary of Agriculture during the period of the war. Aside from this, this man is at the head of the greatest agricultural college in the United States. (Applause.) And it is with pleasure that at this time I have the opportunity to introduce to you Dr. R. A. Pearson, president of our State Agricultural College. Dr. Pearson. (Applause.)

ADDRESS OF R. A. PEARSON,

President Iowa State College, Ames, Iowa.

Mr. Toastmaster, Friends: Everyone here knows very well that I can not fill the place of our good governor—we are very sorry that he can not be here, but I might occupy a few minutes that were allotted to him.

We have heard a most wonderful talk this evening by our old chum and still our good friend, Henry C. Wallace. I don't suppose there is a person in the room but realizes that he is in charge of a tremendous job, and I don't suppose that I could express our good wishes for him any better than to say that we are confident that he will do this tremendous job just as well as he used to tell us that barrel story. (Laughter and applause.)

Do you know, friends, that he has more power than any other man in this country, with the exception of a few that you could count on the fingers of your two hands? He has more power than the governors of states, than the rulers of some mighty kingdoms in this world today, and we are glad and proud that our old friend has been given the opportunity that is his. Now, being a college man, I am going to suggest that we give him a yell before he gets out of the building.

(Three cheers given for Secretary Wallace as he retired from the room.)

Well, I might say a good deal about the work he is doing. He didn't tell us some of the personal things about it, but I happen to be acquainted with quite a number of men in the department and I know that our friend Wallace gets down there at about 7 o'clock in the morning on a good many mornings, and the old colored messenger who has been there a number of years tells me that he sometimes stays so late in the evening that this colored messenger doesn't get home in time for his supper. I don't know how it is that it agrees with him so well, except that he had a hardy constitution that comes from living in this climate and living with us so that he can stand those diplomats, salutes, hard work, long hours, etc. I hope he will not have to stand them all the rest of his life, but I hope he continues down there for a number of years, and then returns to us to be one of us again.

I might have said more while the secretary was here concerning his problems. His problems are our problems; he is working on our problems, and I want to congratulate you upon the progress that he is making. I am hoping that he will be able to accomplish a good many of the things that he had no time to refer to this evening. For example, our exports of agricultural products are large at the present time, contrary to general opinion. We are sending out from one to three times the normal export of wheat, corn, meat and dairy products, and it would be a great thing for this country if he will find a way by which the markets which are just now being developed may be maintained for our advantage in years to come.

There are some very diverse opinions as to the cause of the depression that rests upon us. Of course, we all know it goes back to the war, but in some conferences which I have been permitted to attend I have noticed that honest men may have honest differences of opinion. For example, at the present time there are about four million men in this country out of employment. The normal number of persons out of employment in the United States is about one and a half million. In the larger communities and eastern cities the problem is to find employment by which these people can make a living. In the absence of employment they will suffer great hardships and their families will suffer great hardships, and that, in turn, will develop a spirit of unrest, which is contrary to the best development of this country. Do you know what is happening over in England on account of the unemployment situation? The government has been following a system of doles, so-called, which is the payment of cash to the unemployed, and this system has developed among some of those people a disposition to continue that method of life, and instead of stimulating an ambition to find work, it has stimulated an ambition not to find work, and some of the unemployed are organized and they are seriously advocating the forcible taking possession of libraries and churches and schools in order that they may use those buildings for shelter. In their organization they have a president and they have a secretary, and they issue letters of instructions to their leaders. One of these letters came to my attention in which it was advocated that the unemployed should go into hotels and restaurants and private houses and literally help themselves to food supplies. We are very fortunate that we do not have those conditions in this country, and we certainly do not expect to have them; but what about the remedy for the unemployment? I am going to mention two theories for the relieving of unemployment. I am a kind of filler-in on your program and I have not had time to prepare in advance what I should say to you, but I think you may be interested in these two theories.

One of the great industrial leaders in this country, a man whose operations extend through a large part of this middle western territory, who has large interests in manufacturing and in railroading, is perfectly honest in his conviction that the best remedy is to start building. And so he says if we can only find a way to start building, it will relieve the situation. We are short more than one million houses in this country; we need business houses; we need various structures, to say nothing of

the enormous number of buildings on our farms that would have been put up if conditions had been better. We have thousands upon thousands of freight cars that are standing idle and out of repair at the present time, and there are said to be 16,000 locomotives in this country that are not in use because they need repair. His remedy for the present difficulty is to finance operations of that kind so as to get the wheels of commerce started. If building is begun, it will be necessary to open lumber yards, sawmills, brick-works, furniture factories, lime kilns, hardware establishments, steel mills, and then the coal mines, to keep them all going, and all these would call upon the transportation systems to move the goods, and as the direct result of this there will be more people employed and they will consume more food and the farmers will find larger sale for their products and we will all be prosperous and happy again. That sounds fairly good, doesn't it?

There is another way to present the matter, and, in my opinion, there is a better way. In this country 40 per cent of our people are engaged in agriculture. Today their products have small buying power. Let me illustrate: Before the war the buying power of agricultural products might be indicated by a column from the table up this high (indicating), and the things that they would buy, that the farmer buys, would be represented by another column that high (indicating). During the war the price that the farmer received for his products doubled, and that column went way up there (indicating), but the things that he could buy had to remain stationary, he couldn't buy twice as much; he could buy only the same old quantity, because the price of these things he had to buy also had doubled. And what is the situation today? The price he gets for his product is now the level of the prewar period—on many products it is below that level—it was 91 per cent on cattle a short time ago. But the prices of the articles he is buying are still abnormally high, and that column has shrunk until it is so short that it stands only a little way above the table. The farmer can not buy. The result is that the factories that would supply them are closed or running on part time, and some of them have tried hard to keep going. I know of one that under normal conditions carries about \$100,000 worth of stock; they have borrowed to the limit of their capacity to keep their workmen employed and they have about a half million dollars worth of finished product on hand. The farmers are not able to buy, so the small towns are dead, and they, in turn, affect the larger towns, and all this affects our transportation systems and industries. The railroads of the country have laid off 400,000 men because they have not the goods to haul, and down through the east we have long lines of unemployed as a consequence.

The remedy would be to find some way to give new heart and courage to the farmers of the country, through finance, perhaps, but best of all through giving them an opportunity to see a ray of light and hope for agriculture, and we do begin to see just a little of it. An item appeared in the newspapers the other day about corn selling for 50 cents a bushel over in Scott county at a public sale. There is a tendency upward, and if in one way or another this can be applied to the products of the farm generally, we will see greatly improved conditions. Of course, that is a

big subject and it can be discussed at great length, but it seems there must be some way out for the farmers so that they will brighten up and feel encouraged to buckle up their belts another notch and begin to buy. When 40 per cent of our population begins to buy, it is going to start the factories, and the persons taken on employment there will turn their wages back into food products and other necessities and one end will help the other, and gradually we will get the whole circle going and prosperity restored to this country.

There are two proposed solutions of this problem—take your choice. There is a possibility that both of them will be worked out side by side. But before the farmers can see much hope for agriculture, there must be some reduction in farmers' costs, such as railroad rates. We are told that the railroads of the country are today paying for help more than their total income before the war. According to official reports before the war the railroads of this country were paying for labor one and one-half billion dollars a year, which is an average of fifteen dollars for every man, woman and child in the United States. At the close of the war wages had gone up rapidly, but were then raised still higher, until they reached a point above three and one-half billion dollars a year. The railroads, therefore, were paying more than double what they had paid before the war—they were paying two billion dollars more than they had paid, and that two billion dollars means about twenty dollars for every man, woman and child in the United States every year.

The railroads have made thousands of changes in their tariff rates, and, thanks to the efforts of the farmers' organizations, some of those changes have been very much to the advantage of the farmers; but until railroad labor is willing to stand by the farmer and with the farmer, and with the business man generally, and accept their share of this deflation, we will be up against an exceedingly hard proposition. (Applause.) My friends, they are good fellows; they are splendid men—they are just looking out for themselves, as is perfectly natural, and I do not know what influence will be brought to bear to bring them into line. But they are not the only ones. Some business men must do better, and there are others who are holding on just as tenaciously to their war income. The miners haven't come down much yet, and some of the men in the trades. They are all good fellows, but they don't see it right, and I do not know anything that can be brought to bear upon them so effectively as public opinion. Why is it that the armament conference is a success? I think it is very largely due to the splendid leadership of President Harding and Secretary Hughes, but it is chiefly because of the public opinion of this country and other countries which is centered upon it almost to a man (applause), and the air vibrates to that fact, and they respond to it. Why was it we didn't have a railroad strike a few weeks ago? Various explanations may be given, but the real explanation was that the persons concerned on both sides of the question knew absolutely that the American people would not tolerate it, and so there was no strike.

And once in a while we have to become aroused to such situations and develop a public opinion and in fairness and kindness press home the fact that we must all work together in this period of rehabilitation, in

this deflation process which is occurring and which must go much further before we can be again upon a normal basis, and before agriculture and other industries as well can enjoy their real share of a national prosperity. As President Harding has so well said, it is a travesty that in this country, with its warehouses literally bursting with food, with the mines filled with minerals, with great wealth here, that we should have this great army of unemployed and this year of depression—it is a challenge to the intelligence of the nation. I don't know how best that challenge can be met. By laws? Yes. By regulation? Yes. But best of all by sane public opinion; and I believe that bodies like this are developing such public opinion, and that their efforts along these lines are bound to help greatly in this important cause. (Applause.)

ADDRESS OF HARVEY INGHAM,

Editor Des Moines Register.

Mr. Chairman, Ladies and Gentlemen: It would be a very bold man, as Doctor Pearson suggested, who would come before a body of this kind to make an address on short notice or no notice at all, for that matter. We have been here for some time now, and I am going to keep you only a few minutes.

I think I was present, if not at the very first banquet of this association, at least at an early one, and I remember that at that time I qualified as a poultry raiser—my wife had carefully preserved a dozen eggs for setting and, after proper care and attention, the old hen hatched one chicken. (Laughter.) I asked her what she did with the eggs, and she replied that she knew they were perfectly fresh eggs, because she kept them in the refrigerator all the time. (Laughter.)

And I can come before you this evening as a cattle feeder, for a number of years ago my brother-in-law and myself had some land in northern Iowa, and we decided to buy cattle in the spring, put them on pasture during the season and sell them in the fall. That year our pasture ran short, our cattle couldn't get enough to eat, and they actually lost weight from the time we bought them, and when fall came we couldn't sell them for love or money. We had several thousand bushels of corn on hand that was worth \$1.50 a bushel, and we thought that we could carry them over the winter, put some weight on them with that corn, and sell them at a profit, but when spring came we sold them for less than we had paid for them. (Laughter.) During the three years we continued our efforts as cattle experimenters, we succeeded in losing two corn crops, as well as our pastures, and we decided that there was a Jonah about it somewhere, and we withdrew from the business; and ever since that experience I have felt a sympathy for the men who are feeding cattle, because I know what it is to feed cattle on a losing market.

Whenever I come up to a proposition that is before the farmers of Iowa and the west, affecting them as a class; whenever I find a class of workers that finds itself as a class in straits, I always feel that a proper solution of the difficulty requires that I look into the history of the occupation to find out why it is that disaster hits one class of people harder than it does another, and I think it would be well if the farmers generally

would read the history of their own calling, because if they would, I think they would discover what sort of inheritance they have.

If you should go back to medieval times, you will find that all aristocratic societies depended upon three things for their foundation and preservation—cheap manual labor, cheap farm labor, and cheap soldiers. You will find that all aristocratic societies in days gone by have depended upon food production at cost, manual labor at cost, and fighting done at cost. The farmer, the manual laborer and the soldier were supposed to work for their board and clothing—and not ask too much for board and clothing. (Laughter.) That is the heart of the situation.

Now, why was it, gentlemen, that at the end of the World war congress became so solicitous of the welfare of and interested in providing 6 per cent returns to the railroads on the then present replacement values of the railroads of the country, when you could get out in this state of Iowa all the land you wanted to rent at 3 per cent on the fair value of the land? Now, why was it? It wasn't because of any desire to discriminate. No, it wasn't that. It was because of a habit of thought. I attended a meeting up at the agricultural college at Ames the other day, when Mr. C. W. Barron, editor of the Wall Street Journal, made an address, and while he expressed a good many Wall street notions, he said something that is mighty true. He said: "The reason that food production is cheap in this country is because of the unpaid family labor of the farm." Now, why have we got unpaid family labor on the farm? Why has the farmer got in the habit of rendering that sort of service? And why has he been content to render it? And why do we submit to a sentiment in Washington, and, I judge, the country over, in favor of taking care of everybody else with 6 per cent or a higher per cent of return, and nothing for the farmer?

Now, a great deal has been done to aid the farmer by this congress, as Secretary Wallace has told you. Who did it? It has been done by the democratic representatives of the farmers, and by the republican representatives of the farmers, and they have stood for the farmers' interests against every body, and one of the most effective things for the producer that this agricultural bloc did was when they defeated the attempt to shift a large part of the tax burden off of wealth onto production. (Applause.) The attempt was made, and will again be made, to shift the entire burden of paying for this war onto the shoulders of labor and the farmer.

Doctor Pearson has said something about wages of the railroad workers and mine workers. The men outside of the four great railroad brotherhoods were almost without exception underpaid before this war. All of the non-organized laboring men of the country before the war were underpaid. I myself have very great sympathy for the worker, and I believe today that wages would be at the starvation point if it hadn't been for the great labor organizations. That country is most prosperous that has a high wage scale and low taxes and low rents. Now, what connection does that have with the farmer? It is the highly paid laborer who buys the products of the farm. And without cooperation between the two you will fail of results. In any event, there will not be any result

reached that is worth while until the farmer and the laborer work in harmony and not against each other, because to set them against each other has been continually attempted from the beginning of time. We have got to come to the time when farmer and laborer are esteemed higher. If the farmers and the laborers of this country would cooperate in the true spirit, taking advantage of new methods of protection, they would rule this country. And when rates of interest are going to be guaranteed for anybody by congress, those rates of interest should be arranged with some reference to the returns from our farms. Now, I don't believe in every radical movement that is proposed in the name of farmer and laborer; I don't believe in all of the harebrained schemes raised by men in excited times, but I want to say to you that the soldier will come back home and be neglected and left to die, the labor of this country will labor as a peasant class for wages merely enough to support life, and the farmer will produce food on the unpaid labor of his own family, so long as they are willing to accept the position they endured in the middle ages and have held ever since and are at the present time holding in every country in the world, except this. All societies are built on a peasant class at the bottom, and, gentlemen, you know the prospect today in the United States is that we are going to come to the peasant farmer class—the actual tiller of the soil. I want to say to you gentlemen that we have got to take large views of the future of American democracy, and we have got to stand together to see that those who do the actual work of the world at least receive a living wage. I am in favor of paying a bonus to the soldier boys. Two years of their time they spent working for their board and clothes, and it has taken them more than two years to become readjusted, and many of them are incapacitated. I heard yesterday that there are thousands of the boys who were gassed in the war out of employment and out of food, and it is reported that Colonel Whittlesey committed suicide because of worry on his part over the pitiful condition of many of his former soldiers. We said when the boys went away that if we failed to win, life and property would be worth nothing, and the boys won, and life and property were secure. They were told it was their duty, and they were glad to do it. That was always said. It used to be said that soldiers must fight for nothing to maintain the prince; labor must be for nothing; farm production must be for nothing. I don't want to inject a radical note into this meeting, but, gentlemen, there would have been no such deflation in market prices as took place; there would have been no such smash in prices in this country by withdrawing credit as took place if the farmers had been paying as much attention to the business end as to the political end as some other classes of this country are. George E. Roberts, the financial writer of the National City Bank of New York, one of the most conservative authorities in this country, states that we shrank farm products \$7,000,000,000 in one fell shrink. If we had extended credit to Europe to be expended in farm products, we would have not only held prices and stimulated business, but kept our people employed, and even if we had never gotten back the \$7,000,000,000 that was loaned, we would have been better off than we are today. Mr. Barron declared

that the Federal Reserve Board had sufficient reserves to have extended \$2,000,000,000 more of credit than it did before it started to deflate prices in this country. Mr. Barron is authority for the statement that with an 85 per cent reserve in this bank, which is three or four times as great as that carried by other countries, we have more than 100 cents of gold behind every dollar in circulation in this country. We have over one-half of the gold of the entire world stored in the vaults of the treasury. Gentlemen, deflation would never have taken place, there would not have been this pinch put upon the agricultural interests of the country, if the farmers had taken larger interest in public matters—if they had taken as much interest in those things as they took in the routine of the farm, and I want to urge you gentlemen, tonight, of the Corn Belt Meat Producers' Association to take a larger interest in business affairs, and I want you to take a larger interest in the political economy of this great American republic. I am very glad that Mr. Crerar is leading the movement in Canada. At the recent general election all of the western provinces of Canada selected farmer delegates to their parliament. And in this country I want to see all of the farmer bloc preserved in congress until all of these things have been secured for the farmer, and it will not be preserved if we fail to give it our whole-hearted support. This is a serious time for the world. This readjustment is not going to take place in a day or a week. Do you know that in the last three years since the war that the nations of the world have inflated or increased the debt of the world by \$200,000,000,000? All that has taken place since 1918. The inflated currency, promises to pay, and issues of bonds, have equaled \$200,000,000,000, and the debt of the world is over \$400,000,000,000, on which the interest payment is \$15,000,000,000 a year, and Mr. Barron says there is nothing for them to do but repudiate. It took us thirty-one years after the Civil war to secure any sort of financial readjustment. That is not going to be a ripple compared to what we will see if something isn't done soon with these war burdens. I have been through two money panics, but they have not affected the Mississippi valley; but the readjustment of the world is not going to take place in a hurry, and you want to be prepared for it.

I hope that the leaders of the farmer movement in this country will take a larger and larger interest in public affairs, and I hope for the future of American democracy, for the future experiment we are trying to make of freedom in this great country, that the patriotism of the American farmer is going to be put more and more in control of our affairs. No people will lose or be at a disadvantage that is ruled by its farmers. Farmers never started a war, but they have fought every one of them to a finish. The farm population of this country will preserve democracy and right. Nothing would be better for America than that the farm people of this country should have the controlling voice in our public affairs, and that is my word to you tonight. (Applause.)

The President: I am sure that we appreciate the words that have come from both Dr. Pearson and Mr. Ingham, and while we regret that the governor could not have been with us to address us tonight,

I think we are exceedingly fortunate that we have had these gentlemen with us to give us these splendid addresses to fill in in this emergency.

Mr. Ingham referred to a matter here that I want to call special attention to. You who listened to the reading of my address this morning will recall that I touched on this same question myself, and I was surprised to sit here tonight and listen to Mr. Ingham voice that warning to the farmers of this country—the danger under these conditions of creating a farmer peasantry in this country such as exists in practically all of the European countries today. It seems to me this is one of the greatest dangers that we are confronting here in this great United States of America if these conditions are not corrected, and it certainly behooves the sober, steady-going farmers of this country to see to it that this condition is not allowed to be brought about through the moneyed interests of this country.

After making several announcements, the meeting adjourned to meet on Wednesday morning at 9:00 o'clock.

WEDNESDAY, DECEMBER 14, 1921.

MORNING SESSION.

The President: Now, gentlemen, Mr. Gunn does not need any introduction, to you Corn Belt people especially. He has been vice president of this organization for a great many years and I don't think he has ever missed a meeting, unless it was one when he was in the south one winter, to mingle with us. He is one of our representative farmers and stockmen over at Buckingham, and he is going to talk to us today on the subject of "Cattle Feeding Experiences," so that without further delay I will introduce to you Mr. R. A. Gunn. (Applause.)

CATTLE FEEDING EXPERIENCES

By R. A. Gunn.

Mr. President and Members: If you folks think I am going to tell you anything about making money in feeding cattle, I think you will soon discover that in these sandbagging days it is impossible to do so. I believe that the cards have been stacked against us, and not only the cards right upon the table, but they are Bret Harte's "Heathen Chinees,"

In his sleeves, which were long,
 There were twenty-four packs,
 Which was coming it strong,
 Yet I tell you the facts.

(Laughter.)

So, to tell you anything about feeding cattle to make you money is something I couldn't do, but I will read what little I have prepared, and I have only just hit a few high spots. There are a lot of details I could have gone into, but I think that is unnecessary to a bunch of cattle feeders.

This seems to be a very inopportune time to try to say anything of profit to the cattle feeder, yet we have found out by mighty dear experience that it is not the most profitable time to prepare for war during war times. While these are not peace times exactly, it might be a good time to take stock of what we are doing.

What about the corn that is being piled up on our farms? What about continuing to pile it up another year? What about converting this corn into meat? What about the rotation of crops on our farms? Wouldn't we be considerably ahead in the long run by, instead of going on as many of us are doing today, piling up corn into a visible supply, from fifty-bushels-to-the-acre land, use part of the money we are spending for storage into clover seed, and by so doing lessen the visible supply and instead have an invisible supply of at least twenty bushels to the acre stored up in the fertility of our soil? One crop of clover may not be able to increase our corn yield 40 per cent, but a good crop of clover and plenty of manure will work wonders. But, I think you see the point I wish to make, and that is, while we are unable to make a dollar pay our debts, let alone put anything in the bank, we can with little expense, store up many dollars that we can draw on in the future.

These times may drag on for quite a while, but there is a time coming when there will be a reward for every bit of fertility we store up in our soil.

With the feeding of beef cattle we may divide the subject into three general classes: The feeding of heavy cattle, the feeding of light or medium cattle, and the feeding of baby beeves. I believe to make the most money each class will require a somewhat different treatment. The man who buys heavy cattle, 1,000 to 1,200 pounds, usually intends to make a fairly quick turn and feeds them accordingly. The price of corn enters into his calculations more than it does into those of the feeder of lighter cattle. He gets them on full feed as soon as he can and puts the corn into them, especially if they come from the short grass country. He will, of course, give them roughness, and maybe cottonseed or oil meal, but they are supposed to have their frame already established, so what they need is fat, and that is in the corn.

I do not know that this is the time to talk about the feeding of lighter cattle, 600 to 800 pounds, for I would not be at all surprised if heavy cattle would outsell light cattle during a good part of this year if the statistics on cattle shipped to the country for the last six months are reliable.

However, facts are facts, though figures can lie, and we must take notice of them, so when we find for the twenty years from 1900 to 1920 that the average weight of cattle slaughtered fell from 1,069 to 925 pounds, or a reduction of 144 pounds, and that the dressing weight decreased over 1 per cent; during the same period beef consumption per capita dropped from 107 to 57 pounds, or 50 pounds, with the fact that the consumption of all meats decreased 28 pounds, and in the fact of a decreased production of all meats during the same period from 248 pounds to 196 pounds, or 52 pounds, it must mean something. Either our people desire a less amount of meat and are manifesting it by buying smaller and cheaper cuts, choosing to get their fats some other way, or that the traffic has been gradually loaded up with so much profit between the producer and the consumer that the consumer tries to get out from under by buying the smaller and leaner cuts.

Whether these calculations are correct or not, it seems to me that the corn belt farmers might profit by feeding more light cattle. By using such cattle we can consume more of the roughness during the winter months and more of our pasture during the summer months, thereby keeping our farms in a better state of cultivation.

Of course, our aim in feeding these cattle, 600 to 800 pounds, is to keep them going from the time they come on the farm until they leave it. We try to keep the motto before us that unless we can do more for the cattle than the other fellow, we had better leave them alone. They usually buy these cattle in the fall of the year, early September if possible. They can usually be bought cheaper than heavier cattle. They are brought home given a month or so, or as long as the pastures are good, all the pasture they need. They may clean the best out of the corn fields, then they are placed on silage and clover hay, given all the clover hay they will eat and not over twenty pounds of silage for the first two months. Then the silage is gradually increased until at grass time they are getting all the silage they will eat—also about ten pounds of corn. We do not let up feeding silage as long as they will clean it up, but after they are on grass and a full feed of corn, then you can let up on silage. In doing this we can get rid of that between hay and grass period when cattle used to stand still for nearly a month.

Fly time has never found our cattle unprepared, and when we get hold of a fairly good quality of cattle, we have them in Chicago before August 1, weighing around 1,200 pounds, not a big gain, but these cattle have left the farm considerably better than they found it. Beside helping to feed a few hogs, they have put quite a lot of cheap feed into good beef and helped keep up our rotation of crops, which is very essential if we ever expect to keep up the price of our land, for which many of us have paid our good money.

In the feeding of baby beeves we have still another problem, though much like the heavy cattle in the use of concentrates. They, however, make considerably better use of them. These baby beeves can be made to use quite a lot of silage in their ration for a while. My experience with baby beeves is with those I have raised. We take the cows and calves into the lot and barn, where we have the silage, and feed them practically all

the silage they will clean up. We do this in order to get the calves eating silage. After about a week or ten days we move these cows into another yard close by so we can let them in to their calves once in a while to ease them. This continues for a couple of weeks, when the calves practically forget their mothers, especially if the calves are given a good feed of silage and oats or oil meal, which is fed twice a day. They have all the clover hay they care to eat. Shelled corn is gradually worked in, but I don't care to get them on a full feed of corn until they are out on grass. From then on it is a matter of constant and watchful attention. They may be marketed before, but can be carried on with profit until the International.

One of the values of baby beef feeding in our system of farming comes from the mothers using a lot of otherwise unmerchantable feed. Of course, these cows get some silage, but not all they will eat. In the summer they are furnished the best pasture we can afford.

The President: I take it there are some of these points you have brought out here that these men would like to develop a little bit more, or some points that you haven't brought out they would like to develop, so we will just throw this open for a few minutes' discussion.

Q. I would like to ask Mr. Gunn if he were going to finish up these cattle on a dry lot and not turn them out on grass at all, would he feed them ensilage at the start?

A. Well, I think you would finally get better results if you would limit the silage. I might go back a little bit further. My aim in feeding cattle is to feed up my clover hay and keep up our land—we must keep up our land, and we must feed cattle for that purpose, but that may not enter into the elements you have under consideration.

Q. We have gotten the opinion that silage is not so much of a concentrate—we work as much silage as possible in the fore part of the feed and then finish off on the other concentrates.

A. I never fed any cattle in the dry lot in the summer time. I cannot tell you about that. My cattle are always finished up on grass. I never fed any in a dry lot in the summer time. We have a lot of pasture and we try to make use of it.

Q. Do you raise all of your own calves that you feed, Mr. Gunn?

A. Mostly, yes; I sometimes pick up some.

Q. Just in the neighborhood?

A. Yes, just in the neighborhood; but I have never shipped any calves in from the central markets, and I don't know how to handle them, at all.

Q. What kind do you raise—white-face?

A. I might start an argument here—I have good ones—any good beef type. I found this true, the Hereford or Angus—it is probably more true of the Angus—you may have them ready for market by the first of July, and you can go on with them and keep them going and they will be ready for market at the International, and they will make gains all the time. I don't know whether that is true with other cattle or not, but I rather think it is, but the Short-horn wants to get its growth and then go on and finish it up.

Q. I would like to ask Mr. Gunn if he ever had any experience in feeding silage with grass to fat cattle?

A. Not with grass; I shut the silage off. They shut it off themselves if you get them on full feed of grass, I find they shut it off themselves.

Q. Don't you think it is more economical to have smaller pasture and feed silage in connection with it?

A. If we had a small pasture they would feed it down closer. My pastures are large, and they have all that they want to eat.

Q. I think the time is coming when silage is so much cheaper than pasture that a man can't afford to have large pastures, and it gives them a variety of feeds.

A. I don't think that silage is a very cheap feed. It costs me mighty near a dollar a ton—at least it did the last couple of years—to put it in the silo, and you figure your corn is sixty bushels to the acre, and you may get eight tons to the acre. I can't consider that a very cheap feed.

Q. Do you have blue grass pasture?

A. Yes.

Q. It is not suitable for farming?

A. No, sir.

Q. Don't you think a sixty-bushel corn crop will produce a little more than eight tons of silage?

A. No, I don't think so. This year it would not. I put in corn this year that I don't believe made over seven tons to the acre, and I know it would have made sixty bushels—not many leaves on it, but it was big ears. Of course, the corn I put in was the second crop—that is, it had been sodded the year before and this was the second crop. I don't believe it would make over that, because I put sixty acres of corn (you can figure it out for yourself) in one silo—one silo is 20x40, the other is 18x36 and the other one is about 19x40. I just figured that I didn't get much over seven tons in there by the time it has settled down. The first one settled down

until—I have opened two of the silos and I can tell you about what was in them. The first one I mentioned, 20x40, settled down nine feet; the next settled, well, it would be pretty nearly the same, about nine feet, and the third one, the small one, I haven't opened yet, but I figure it has settled about the same as the other, and I put sixty acres of very good corn in them.

Q. These heavy cattle that you are talking about, when do you plan to have them in the market? These cattle that are 1,200 pounds now, that come off the pasture good and fat, that are fed lots of corn and alfalfa and lots of straw and everything to go with it, when do you plan to have them go on the market?

A. Your idea is to make—

Q. I want your idea.

A. I will give you my experience. My experience has been to feed those cattle. My main business is feeding light cattle. I carry them from September on until—whenever I can market them. I may pick up heavy cattle in between, but I don't figure on keeping those heavy cattle very long. I give them a quick feed and send them along, maybe, about the first of the year.

Q. They are just now off pasture—second grass pasture?

A. You have asked something that I never do. I would be getting out of my sphere when you ask about that. I suppose I would feed them until they got fat or until the market suited me.

Q. Do you feed much oil meal at \$40 a ton now?

A. Do you mean linseed oil meal?

Q. Yes.

A. I wouldn't give them very much with corn as cheap as it is. I don't think they need it, if you give them a lot of clover hay.

Q. Do you give them any molasses on their corn to sweeten it?

A. No, sir; I wouldn't.

Q. Even at \$28 a ton for molasses?

A. No, I don't think it is worth that. I have got some at home there that is in barrels and has been there for a couple of years, and it didn't cost me that, and I am not using it; I don't think it is worth using. The only way it is worth using is to bore a hole in the barrel and set it over a trough and let the pigs lick it up.

Q. What do you figure that your calves cost you at weaning time? The cost of the cow and the interest and the keep of the bull and everything?

A. I try to get that down to about \$30. I don't believe I can get them below that, and that is the reason I said I didn't feed them

all of the silage they would eat. I want that old cow to come through on pretty cheap feed, if she has to, to get that calf below \$30.

Q. How old would he be at weaning time?

A. I usually have them come along in May—at any time from April to June, but I try to have them all, all of these calves, castrated before hot weather. I don't feed very many heifer calves; I cut out the steer calves. I replenish my herd with the heifer calves.

Q. What do you do with the heifer calves?

A. I keep them for breeding purposes and keep the older ones going to market.

Q. Out of 100 breeding cows, how many calves can you depend on raising a year?

A. On an average, my experience has been from 90 to 100—that is, 90 calves to 100 cows. I have even had 100 per cent, but that was unusual; two cows had twins, and they ran it up, but I know on one bunch I had 100 per cent, but 90 per cent would be a very good average.

Q. Have any troubles with contagious abortion?

A. No, I never had anything to do with that.

Q. Steers that you wanted to run on grass next summer without corn, you would suggest not feeding them too heavily on silage this winter?

A. That is my experience—they would not make the gain on the grass.

Q. If you didn't have the clover, would you feed them some other kind of roughage?

A. That is my experience; I would feed them roughage. I have bought bulls where they were kept shut up, and it would take you pretty nearly a year to get those bulls to the point where they will feed in the pasture.

Q. In raising these calves at \$30 at weaning time, what elements have you put in there and what figures of cost?

A. The price or rental of pasture land, the silage that they eat. I don't count very much for the roughness they eat, because usually my cows are around straw stacks, and if I have clover I thresh out the clover seed and that makes good feed. They are simply scavengers for the place, and I charge up pasture, and that is quite an expensive affair, so that I have to cheapen it up on the other. You cannot give them three tons of silage and figure that you get them through at \$30.

The President: I think, gentlemen, we will have to close this discussion at this time. The next speaker on our program is Mr. L. A. Andrew, who is president of the Iowa Farm Credit Corporation, and formerly president of the Iowa Bankers' Association. Mr. Andrew has been before former conventions and meetings of this kind on a number of occasions, and I think it is hardly worth while for me to introduce him in the ordinary way, as most of you know of Mr. Andrew, if you haven't met him personally. So at this time I will introduce Mr. Andrew for a talk on "Farm Finances."

FARM FINANCES

L. A. Andrew.

Mr. Chairman and Members of the Corn Belt Meat Producers' Association: I am very glad to be here today, because the bankers of Iowa have had a direct personal interest in the Corn Belt Meat Producers' Association for quite a few years. You men throughout the state of Iowa are large users of credit. It is you men who have built up Iowa farms. You are men who have a fundamental idea that Iowa land is not going to last forever if it is being mined, and the rest of the people are going to get that idea before many years. I was talking with a farmer from Scotland the other day and he said he couldn't understand Iowa; the greatest thing he found over here was not our farm equipment, our farm buildings, as wonderful as they were, nor farm implements, or anything of that kind, but our farm land. He said before they started a crop over there they had to use so much fertilizer that it took practically half of the proceeds of that crop to pay for the fertilizer, and here, he said, you don't seem to pay any attention to the land, at all, just keeping on putting in crop after crop; but there is an end to that and you men who run farms where feeding is done extensively, are the ones who are building up Iowa land.

The bankers of the state have their difficulties, too, which in the main is probably best illustrated by this story—it is a banker's story and copyrighted: It seems that a Spencer banker came to Des Moines a few weeks ago and in going by a dark alley he was attacked by a yegg. The banker was quite husky and they fought up and down the street for a time, and finally the yegg hit the banker on the head with a billy and he went down. In going through the banker's pockets the yegg found an Ingersoll watch and 37 cents. Since this happened in Des Moines, the yegg sat down and waited for the banker to come to. When he regained consciousness, he sat up and rubbed the dirt and blood out of his eyes, spat out a tooth or two, and then noticing the yegg sitting there he said, "Well, you got all of my money, didn't you?" "Yes," replied the yegg, "I got all your money and your watch, but I just wanted to know why in hell you put up such a fight for 37 cents and an Ingersoll watch?" And the banker said, "It's because I didn't want to reveal my financial condition." (Laughter.)

One other copyrighted story that I want to get off my chest is of a scene laid at Red Oak. The president of a private bank was attending a political convention and he was surprised to find, when he looked out over

the crowd, that the vice-president was also there. When he got to him he said, "Did you leave the bank, too?" and the vice-president said yes, but that the cashier was there and that was enough to run the bank these times. He walked on a little farther and ran into the cashier, and then there was something doing, and they wanted to know why the dickens he had come away and left that bank all alone, and the cashier replied, "Why, I thought the vice-president was going to be there; I didn't have any idea he would come too; I'm a delegate to this convention, but you men ought to have stayed home." The president was kind of worried for a while, but finally his face brightened up and he said, "Tom, there's nothing to worry about; you locked the safe before you came, didn't you, and we are all three here." (Laughter.)

Now, gentlemen, it is well enough to smile a few times these days, because we have many things to bother us in a financial way, particularly, which do not provoke smiles, but we do not get anywhere by being too pessimistic. It is the man who tightens up his belt and goes after things that gets things, not the man who sits around and says that things are going to the dogs, and he is done for and everything else is done for, because it is going to take a lot of close figuring and hard work for Iowa to pull out of the situation she is in. There are many things that are going to combine to help us. There are many things that combined to put us where we are. The bankers and the farmers of this state have a big job ahead of them; they have got to work; they have got to help each other more than they have ever done before, and one thing that they must have is supplemental credit for both the farmers of this state and the bankers, and that is the thing that I have come here to talk to you about this morning. We are interested in this, and people all over the state of Iowa are interested in the matter of supplemental credit for the Iowa farmers and the Iowa banks.

Now, perhaps we had better discuss this subject by starting right in the beginning of it. If you are interested in a thing, you would like to know how things happened and what you expect to do, and I am now referring directly to the Iowa Bankers' Association. As I finished my term as president of the Iowa Bankers' Association we had just finished two years of the greatest prosperity that Iowa had ever seen. We had just had poured into Iowa two billion dollars for the two crops—a sum unprecedented in the state. We had gone through a period of prosperity which some people thought would keep on forever; we were buying everything, and if we didn't have the money we gave our note, and he got what he wanted on his paper; but now it is pay time and we are cleaning it up. The period of deflation was commencing last year. In May of 1920, or June, we were trying to get cars for Iowa, and fifteen organizations had joined together—we all joined together to try to get cars for this state to help move the products from the farm and factory. It is hard for us to realize that in a year and five months we have gone through this fearful period of deflation. It soon became evident we were in for a serious time, and, as far as the bankers were concerned, they found out they would have to work in very close co-operation with the farmers of this state, and they did so, and they were met more than half way. It went along in this

period of summer and early fall, with this rapid deflation going on, and much unrest arose because farmers were being asked to liquidate their indebtedness on a declining market, which was at that time one-half what it had been in May and April, and so there was a great deal of uneasiness and much unrest, and it seemed in the early part of November to put on a series of banker-farmer conferences to see what was ailing everybody and see what both sides would say about it—the first was at Waterloo, the second at Fort Dodge, the third at Red Oak and the fourth at Ottumwa. They were a wonderful success. The agricultural papers east and west said they were the most successful meetings held in this country, because they gave each side the view of the other, and much good resulted. I want to say in interlude here that the only trouble we had we started out with the idea that we might have a little argument between the bankers and the farmers, and we took all precautions necessary to settle any argument that might arise between farmers and bankers, but the only real argument we had in all the meetings was one between a grain farmer and a stock man down at Red Oak. One of them got up and said there's no use talking about it, that the meat producers, the corn feeders, were responsible for the good price of corn, anyway, and that the fellows that just produced the corn depended on them entirely, and then the other fellow came back and said you fellows couldn't furnish the live stock if we didn't furnish the grain, and that started it off, and that was the only real argument we had at any of those meetings. After those meetings were held the officers of the Farm Bureau Federation came to the Iowa Bankers' Association and said that farm finance plans had been presented to the farmers of this state and they felt that something should be done to put forward a plan of farm finance that could be recommended and would be of help, and asked our co-operation in formulating such an institution. We received that in the spirit that it was given. We felt that it was a real need, and so a committee was appointed and we visited New York, Chicago, Washington, Boston, and all of the places where rediscount agencies for industries had made a success and we studied their plans. We found in other cities than those mentioned rediscount corporations which had made a great success of handling credits of various lines of industry. At Washington we found several men who had made a lifetime study of farm credits, and we got many valuable pointers from him. At Chicago the presidents of the five leading banks gave us considerable time in talking it over. At Ames we found two or three men who had good ideas to help. We put all of these ideas together and out of it came the Iowa Farm Credit Corporation. We gave this plan to the Farm Bureau Federation and it was accepted. They called in their legislative committee and their attorney to prepare the bills necessary to go through the legislature, which they found were necessary. These bills were prepared and our legislative committee was brought in, and they adopted these plans as theirs, and so through the legislature these two big organizations worked side by side helping to put into law the best piece of legislation that any state has had on its statute books in the line of sound farming legislation. These bills were four in number. First was the bill to create a state licensing of elevators; second, a bill permitting the formulation of co-operative farmers'

associations; third was a bill to create a change in our incorporation laws making possible the formation of this Iowa Farm Credit Corporation, and, fourth, a bill permitting state banks, savings banks and trust companies to invest a certain per cent of their funds in the stock of this Farm Credit Corporation. These bills were all referred to committees, every safeguard possible was put around them, and finally in both house and senate they were passed unanimously—there wasn't a vote against them. After the bills were signed by the governor, the Farm Bureau sent word to us to go ahead and form this great corporation. I called in the executive council of the Bankers' Association and went to work on the proposition, and we appointed a committee and the Farm Bureau appointed a committee, and those committees worked together for six weeks going over these various plans, and finally on June 8 of this year the articles of incorporation were filed with the auditor of state.

Now, how will this corporation benefit the farmers of Iowa? Under the law we can take only one class of paper, and that is farm paper. We cannot take manufacturers' paper or store paper or anybody else's paper—but only farm paper. And that paper is divided up into four different classes:

First—We can take the note of any Iowa farmer which is secured by a warehouse receipt for grain or other farm products.

Second—We can take a note secured by a chattel mortgage on live stock, and endorsed by any Iowa bank. That classification takes in a large class of paper.

Third—We can take a note secured by a first mortgage on Iowa farm land, and endorsed by an Iowa bank.

Fourth—We can take paper secured by any collateral which is acceptable under the Iowa banking law.

After we have invested as much capital as seems wise in those classes of farm paper, we have a right to trust-deed these notes and issue debenture bonds, and these debenture bonds may be sold in this state, as well as other states, thus creating a large investment fund which will amount to twenty million dollars on each million dollars of capital. The Farm Credit Corporation will be a larger rediscount corporation for the benefit of the farmers of this state and the banks of this state, and it will do several things. Perhaps you men do not know—you ought to know—that the class of farm paper in this state today is not subject to rediscount. It is a serious thing; it affects you directly; it affects the farmer of this state, and it affects the banker of this state. I will give you two examples: Suppose you own 320 acres of land free and clear of all liens and incumbrances, and you want to put a corn crop on that farm, or put tiling in that farm to increase its fertility, or send your boy to college, and you go into the bank that is a member of the Federal Reserve System and want to borrow \$1,000 and if that bank has to rediscount that note with the Federal Reserve bank in order to make the loan, he cannot make it, because that note is not subject to rediscount. Suppose you have \$20,000 first-farm mortgage in your possession. We, here in Iowa, think there is nothing better than a first farm mortgage, and we are right, and the rest of the people will find it out a little later. Supposing a man has a \$20,000

first farm mortgage well worth the money and he wants to borrow \$1,000 and puts up his note as security. If the bank has to rediscount that note in order to make the loan, it cannot take it, because it is not subject to rediscount. One of the main troubles of Iowa has been that some people have thought that we can pay our indebtedness on quick assets. There is another serious thing for Iowa farmers to think about. Iowa farm business cannot be paid on quick assets. They tried to make us do it, and it pretty nearly broke a lot of good Iowa farmers, and pretty nearly broke a lot of good Iowa banks, and if that deflation had not been stopped I don't know what might have happened. The farming business is so complex, so diversified, it requires so much capital, that a man must borrow more money to run that business on than he can pay by the sale of his quick assets, and that is a rule of rediscount at the present time.

Another thing that we have got to consider in these times. Iowa farmers carry indebtedness entirely through commercial banks. There is no other line of industry requiring a large amount of capital which does that. In the last fourteen months, particularly, you have noticed in the papers a large turning-over of manufacturers' and other lines of industrial paper from the commercial banking field to the investment banking field. That is something that we must give thought. You and I in this room are together, and the man who doesn't give thought to his business in a year or two will drop by the wayside. For instance, you cannot do any good to the Iowa farmer by loaning him money for fifteen, twenty, thirty or sixty days, and the great majority, or the general average, rather, of notes in the Chicago Federal Reserve Bank was for a period of eighteen days. That is, they make a lower rate for notes maturing in fifteen days than for thirty, etc., and the great mass of the paper was for the short term. But the farmer has got to have longer than ninety-day paper; he has got to have six-month paper and one-year paper. In the banking business, our first obligation is to depositors. We must keep our loans in such shape that we can pay as the depositor asks for it, and we cannot do that by putting in a large volume of what we call frozen assets, and that is the cause of our main trouble today—that the bankers of Iowa have in their vaults a large amount of frozen assets. How did it accumulate? We have been taking notes of Iowa farmers with large equities in their farms for six months; we knew that they couldn't pay it in six months, and the farmers knew they couldn't pay it in six months, and that has been going on all over the state and there has been a large volume amounting to hundreds of millions of dollars accumulated in Iowa banks. These frozen assets cannot be realized on, and they have tied up the banks, and deposits have been coming on. What has been the result? The majority of the banks have had to borrow large amounts of money. They couldn't realize on this class of paper. There ought to be a place to put that paper and put it into an investment field where there is no demand to be met. I think if you give this thought, you will see there is something to it. If you give a note to a commercial bank, this bank must collect that note when the demand is made for that money. This corporation will take a large class of paper which should not be in a commercial bank and put it into an investment banking field, and in this way take care of Iowa farm-

ing business as it has not been taken care of before, and stop this demand for liquidation at times when it is hardest to liquidate—liquidation is **always demanded at a time** you do not want to liquidate. Have you ever noticed that, you older men and younger men? Why? Because that is the time that the bank is having demand for their stocks, and that is the time that they make demand on you to pay your notes if you possibly can, and that is what creates the trouble. If we can take Iowa farm paper and put it in the investment field we have done a great service for this state. Remember these few points: You cannot liquidate Iowa farm indebtedness on quick assets; second, you must get out of the commercial banking field in this state with a large volume of the farm paper which belongs in the investment field; and, third, to try to create in this state a market for good, sound investment paper to take care of this everlasting flow of money going out of Iowa for investment. At the present time there are 21 men working in this state, as we are sitting here, selling securities to Iowa people from outside of the state, even as hard up as we are, and you would be surprised if you have any knowledge of it how fertile a field Iowa is considered. One corporation in this state selling securities from outside of the state has eleven branch offices in Iowa and around fifty-six or fifty-seven men working in the state. Another large corporation from New York has a large branch office in this state with eighteen men working all the time. In February of last year there was an issue of one billion dollars of government bonds brought out, and the manager of one of these officers told me that their institution had sold three million dollars' worth of Belgian government bonds in the eastern part of the state in two weeks. We bankers know that every week large quantities of money go out of the state for investment, and the sad part of it is that we haven't had the sense to try to direct that investment into proper channels. It has always been the idea of the banker to keep all of the money in the bank that he could, and if a man came to him and said, "I have two or three thousand dollars on deposit with you and I want to ask your advice about such-and-such an investment," and you give him the time-worn advice, "You may want to use it in three or four months, and if you invest it you won't have it," and many a time we chuckle to ourselves with the thought that we had changed his mind, but in two or three weeks we get a check back for some Texas old stock, a California fruit ranch, or some other equally distant place, and then the saddest thing is that the money he sent out there very seldom finds its way back. We bankers are going to get some sense in this matter as well as the farmers, because it is a mighty dull man that doesn't get some really constructive ideas out of a thing like this, and we are going to do something to help our customers invest their money wisely, and that will make a market for the paper we put out. We haven't in the past had any real good paper to present to our customers, except farm mortgages and county bonds, and they are in such form as not to be suitable as to length of time. We will make loans for ninety days, four, six, nine months or a year; we will sell debentures for the same length of time. We will have a first mortgage department which will take care of farm loans for five and ten-year periods, so that we will be able to take care of an Iowa investor from \$100 up, and for any time from three months

to ten years, and it is the first time that a good Iowa investment can be offered to the people for any time that they want it. So that we expect to build up in this state a large investment market for our bonds and at the same time do the state a great service, because that is a serious thing to have so much money going out of Iowa for outside investment.

Now, gentlemen, we have a direct service to perform, and we believe that we have the machinery necessary to do it. We can commence to operate when we have one million dollars of paid-up capital. We have now about six hundred thousand dollars, and we are very anxious to complete that one million dollars for a number of reasons: We have been promised co-operation in this state from the War Finance Corporation, which will be very valuable. Mr. Cunningham, of the Farm Bureau, was in Washington very recently and they said several things to him of which we are very proud, and I want to give you that message. Ed went through Washington on his way to Atlanta to attend the meeting of the American Farm Bureau Federation, and while there wired us to send copy of our articles of incorporation to him, which we did, and on his way back home he had a conference with the officers of the War Finance Corporation, which was held in the great treasury building in Washington. Can I visualize to you for a minute this meeting in the old treasury building in Washington, standing there at the head of Pennsylvania avenue, just a short distance from the White House? In this building is stored the greatest accumulation of gold in the world, and in this same building was done the financing of our operations during the war, as well as our allies. In this old building, and in this particular room where the War Finance Corporation held its meetings during the war, this conference met around a big table, the corporation represented by their attorney, Senator Kenyon and Ed Cunningham representing the Iowa farmers. Quite a scene. The meeting was called to order by the chairman, and Eugene Meyer, Jr., was asked by Senator Kenyon if they had looked over the articles of incorporation of the Iowa corporation, and he replied, "Yes, we have, and I want to say that the plans of the Iowa Farm Credit Corporation are the most satisfactory and best that we have yet seen." (Applause.) Then Mr. Angus McLean, an investment banker who has handled hundreds of millions of dollars' worth of bonds, got up and said, "Mr. Chairman, I have looked over the articles of this corporation, particularly with regard to their debenture bonds, and I want to say that there has been no better class of investment placed before us for investment than those offered by the Iowa Farm Credit Corporation." And then they promised Mr. Cunningham that they would take from ten to twenty million dollars' worth of bonds just as soon as we are ready to do business. Therefore we are anxious to get this subscribed so that we can get started and take advantage of this offer, and this was the first direct offer, they told Mr. Cunningham, that the corporation made, of the many hundreds who come to them every week to make loans. The War Finance Corporation is the only institution which has a large volume of money to loan in the United States, and they said that of all of the hundreds of proposals presented to them this was the only one in which they had made a direct promise. So that is the principal reason we are in a hurry to get this corporation functioning. We are a perma-

nent organization at the present time; we are incorporated under the laws of Iowa, the stock is all of one kind, it has an equal vote, it has no other liability except the payment of the first subscription, and you don't have any personal liability under the stock, and every plan and every safeguard that could be put around it was put around it for the safeguarding of the investor.

There are one or two things that we must consider in this crisis that we are passing through, because it is a real crisis, gentlemen. I don't believe any man in this room has seen any worse times, or more serious times, than we have now, or have been during the past six months, and I believe that we have seen the worst of it; but don't anybody believe that we are in for a quick reversal, that we are going to have good times immediately, because that would be foolish. We have turned the corner, but we are in for a long, hard pull up the hill, and every man if he is wise wants to recognize that fact and adjust his business to that kind of program. But he can believe, I think, with all good judgment that we are over the worst of it and it is going to be a good long, hard climb back to normalcy, but things are getting better gradually. Money is a good deal easier in the east than it is here because business is slow and industry shut down, and that affects much money. The main thing that affects Iowa is this one thing. It doesn't make any difference to us what the price of cotton or steel is, so long as we have low prices on Iowa products of the farm, as we have them today. The only thing that is going to bring back prosperity to this state, or that is going to enable farmers to do what is necessary, is to have a return of farm product prices somewhere near the cost of production, and I am one who believes that we never will have any return of normal times in this state, or much betterment, until we have an increase in price, because we depend entirely upon the prosperity of the farmer for our prosperity here in Iowa, and every man in Iowa depends entirely on the prosperity of the farm as to whether he makes money or not. We must look at things in as direct a way as possible, and there is going to be a time for the next few years that will require the best degree of thought and action that any man in this room can give his business. There is going to be a shaking out all over Iowa of some mighty good men, and it is too bad. There are some men who have given a lifetime of labor in Iowa to the accumulation of sufficient capital to buy a farm, who will drop by the wayside. It is a tragic time for them, and it is a tragic time for the state. There are hundreds of young men who have tried to get a foothold in Iowa farming who are going to lose everything they have put in. I feel a good deal worse for the man 60 years old, who has worked a lifetime to accumulate 160 acres clear, and during the boom he bought 240 at inflated prices, and now he has both propositions on his hands, and in many cases both are wiped out. That is a real tragedy. But, after all these things are said and done and the field is clear, we have got to work back, and we will work back, because Iowa people have that reputation. This country can come back mighty fast if they will give us a decent price for our products, and it won't take very long to do it.

Now, in closing, and before I extend the opportunity to ask questions, I want to bring just two or three things home to you. Look at these things

selfishly if you wish, because we are all selfish creatures, but some time ago I was in Washington in the interest of some legislation and I said to a congressman, "I wish you would support this bill, because it is a real good bill," and he said, "Andrews, would that be of benefit to me in my district?" I said, "Yes, sir, it would be of direct benefit to you, because the bankers want it and they are pretty good men to have around on election day." And then he coughed again quite deeply and wanted to know if I thought it would be a benefit to the party in Iowa, and I said yes, it was a pretty good bill for them, and then he coughed three times and in a low voice said, "The bill has merit, and it would be a real good thing for the country, would it not?" (Laughter.) That is the way a good many politicians think about affairs, and we have cataloged them in the same way. Let us look at the situation in Iowa from a selfish standpoint, and then for the state. In order to help ourselves and help Iowa, we have got to do everything possible for better farming financing in this state. That is of direct personal interest to every man in this room, and, further than that, it has a direct personal interest to your state. Why? Because Iowa has had the reputation for many years of being the very most conservative state in this Union in a farming way. It was just a few years ago that we had two members in the president's cabinet, two speakers of the house, Allison, the chairman of the leading committee in the senate, and incomparable Dolliver, chairman of the second committee in the senate. Back in that day every man and woman in Iowa was proud of the state for the great standing we had directly in the affairs of the nation. That was a personal triumph for Iowa, but since that time we have kept that position—not having so many men in prominence in the political life in Washington, perhaps, but Iowa has always been the leading state for everything of conservative strength and having the class of farmers and business men who kept it that way. We have a situation in this state which will breed a radical element. We have elements here at work which we haven't any idea will show as much strength as they will. Before grass gets green again in this country we are going to have influences brought to bear on rights of private property which will make us fearful, and it will be the same in this state before we get out of these troublesome times.

And so the real strength of Iowa is in its strong, conservative men and women working together for the good of the state, and by working together we will soon have a bright sun arising again and it will be the sun of prosperity, it will be the sun of good times in this state brought along by a co-operation between the various business interests of this state, by a real partnership of the farmers and the bankers.

I thank you! (Applause.)

The President: Are there any questions you care to ask?

Q. What interest will those debenture bonds bear?

A. The interest will be entirely governed by the market rate, of course, and they will vary from month to month.

Q. Then this is really a rediscount proposition?

A. In the main, yes.

Q. What will be the probable rate? Make us a guess.

A. At the present time, the rate, on the plan we have with the War Finance Corporation, will be 6 and $6\frac{1}{2}$ per cent on loans we take.

Q. Is there any commission on that?

A. No; no commission.

Q. You take a rediscount alone?

A. We take it with the banks.

Q. On a chattel mortgage or real estate or straight farmer's note, what will be the interest on the long-time, farm-secured note?

A. At the present time, all over Iowa, it is on a $6\frac{1}{2}$ and 2 basis, and we follow the market, of course.

Q. What do you mean by a farmer's note—just a farmer's note endorsed?

A. Yes.

Q. And when can it be paid off?

A. At any interest time. Please take into consideration the two different classes of business we will have.

Q. Does that refer to farm land loans?

A. That is only paper. That is a side issue with us. Our main business is with farm paper.

Q. Will the rate you quoted, $6\frac{1}{2}$ and 2, apply to paper?

A. That is the general going rate in Iowa on farm loans if you can get any money.

Q. What commission would that be?

A. On paper?

Q. Yes.

A. That depends on the different localities. Do you mean investment paper?

Q. Yes.

A. Probably one-half or one-fourth of one per cent.

Q. Do you think that these tax-free securities had something to do with the advance in the rate for farm mortgage loans?

A. Yes, I do.

Q. About how much?

A. It is hard to tell, gentlemen. There has been a lot of things at work on this proposition, and the main influence today is the large amount of policy loans which the insurance companies are being asked to make for their policyholders. I understand that three of the large insurance companies are borrowing money to lend on their policies.

Q. What is your attitude toward these tax-free securities?

A. That is a personal matter that doesn't interest the crowd here.

Q. I mean your company?

A. We won't take any stand on the proposition. As a personal matter, I think there are too many of them. If you shut off the tax-free feature, you will have to pay more interest for your towns and counties to get money.

Q. Maybe we wouldn't spend so much then.

A. That would be a good thing, then, if you didn't spend so much.

Q. I would like to ask how a man could finance himself in securing young stock. Would he have to give a mortgage on his stock? If he should, suppose in the meantime that stock should probably be changed two or three times. Do you have to pay off one mortgage when you sell your stock and then get a new loan or can you extend that over a given period of time?

A. Now, you know that as well as I do, I think. You know that is a feature of the banking business in this state; that is very intricate and has been the cause of great loss, not only to the men who borrow but the banks that lend. For that reason, we have decided, so far as the present management of this company is concerned, that loans on live stock of that kind must be made through the bank, because loans of that kind, to be safe and conservative—and that is the kind of company we will be—must have men close to it to keep track of it. I have loaned several hundred thousand dollars on live stock, and, believe me, I could tell you stories until midnight of what we have to go through on that proposition, and some of you men have had actual experience on the other end. In the past two years the banks of this state have taken large loss, and the men who bought the cattle have taken large losses. I regard the cattle-feeding business as a profession. One man you could safely lend to for feeding purposes, while his neighbor, as good a moral risk as the other, would not be such a good proposition. I have loaned money to two men on adjoining farms, and each of them has put in two or three loads of steers on his farm, and one of them has made money while the other one has lost, and they are good grain farmers. The cattle-feeding business is a profession; you can not pick it up over night, and you can not go into it and make money the first year; it is going to be an expensive lesson for somebody to get a man started. That is one of the great troubles

in that line of business, a man has got to be brought up and bred in the business, I believe.

The President: If there are no further questions, we will continue with our program.

Mr. McPherrin: I happen to have a clipping in my hand which I believe everybody is interested in, and if the president will glance at it he will get its contents and can then have the secretary read it. It appealed to me very strongly as something that we might take action on.

The President: Yes, this is very interesting. This seems to be a resolution, as I take it, passed by the Guthrie County Farm Bureau. It seems to me that this is perfectly in line with our ideas so far as that is concerned, I am sure. Nobody would object to it, but, of course, according to our rules it should go through the committee on resolutions, Mr. McPherrin, and I think that should be proper. I will just turn it over to the chairman of that committee, and I am sure that they will be glad to endorse it, and after the committee makes its report this may be brought up if it is not contained in their report.

Mr. McPherrin: It appealed to me so strongly I thought I would like to have some thought given to it.

The President: I am in perfect harmony and sympathy with the sentiment expressed in the resolutions; but, of course, would not want to go back on the ruling and the precedent that has been followed by this organization all these years in regard to bringing resolutions out in this way, and I think it would be a very bad precedent to set at this time.

(Short recess taken while Federated Co-operative Shippers retired from the hall.)

Th President: If you will come to order now, we will proceed with the business part of our meeting. I think at this time we will just as well listen to the report of the treasurer, Mr. Goode-now.

TREASURER'S REPORT—1921.

Receipts for the year.....		\$5,716.00
Disbursements—		
Bank collection fees.....	\$ 30.90	
Refund to county associations.....	9.64	
Directors' expenses.....	155.87	
Expenses of delegates to Washington, Chicago and Des Moines.....	269.54	
Stamps, printing, stationery, etc.....	1,163.28	
Bond for treasurer.....	15.00	
Annual meeting.....	314.04	
Over-payment of dues.....	15.00	
C. L. Harlan, salary and expenses.....	2 239.80	
President's salary and expenses.....	2,990.38	
Marilla Goodenow, assistant secretary.....	600.00	
Secretary's office.....	250.00	
American National Live Stock Association.....	100.00	
T. W. Tomlinson.....	100.00	
<hr/>		
Total		\$8,203.45
Balance on hand.....		4,489.43

I will now call for the report of the auditing committee which audited the books and accounts of the treasurer.

Charles Cessna: In the absence of our chairman, Mr. Dawson, I have been asked to read this report:

To the Corn Belt Meat Producers' Association: We, the Auditing Committee of the Corn Belt Meat Producers' Association, have examined the accounts of the secretary and treasurer and found them correct.

W. P. DAWSON, Chairman.

F. C. CESSNA.

D. W. MOTT.

Motion made, seconded and unanimously adopted that the report be accepted and placed on file.

The President: We will now listen to the report of the committee on resolutions.

RESOLUTIONS OF THE CORN BELT MEAT PRODUCERS' ASSOCIATION

December 14, 1921.

1. We favor a continued organized campaign to increase meat consumption and to that end pledge our support to the principles of the proposed National Live Stock and Meat Board.

2. Since there is prospect of a great increase in hogs in 1922 we call on the National Live Stock and Meat Board, the packers, the daily press, and the United States Department of Agriculture to increase the consumption of pork products at home and abroad.

3. We express our approval and pledge our support to the efforts of the producers to handle the shipment and selling of live stock through co-operative agencies and urge that all such organizations secure the greatest strength and benefit by uniting their efforts to the greatest degree possible.

4. To Senators Kenyon and Kendrick and to all others who have helped in the passage of packer and stock yards control legislation, we express our deep appreciation for their valuable efforts.

5. We reaffirm our resolution of last year "demanding of congress the enactment of such legislation as may be necessary to assure to the farmers of the nation the full, free and unrestricted right to bargain collectively for the marketing and sale of their crops."

6. Whereas the just claims and needs of our great agricultural industry call for intelligent, sympathetic and systematic study and support in congress;

Resolved, That the Corn Belt Meat Producers' Association express its endorsement of the so-called "agrarian bloc," commend their past efforts on the farmers' behalf and urge them to continue this helpful effort in the future.

7. We commend the selection of Mr. Henry C. Wallace as Secretary of Agriculture and express our high appreciation of the outstanding service he is rendering the agricultural industry in this high office.

8. We protest most emphatically against any and all proposals to limit the sphere of the United States Department of Agriculture by the removal of the Bureau of Markets and Crop Estimates, the Forest Service, or other divisions of its work to any other department.

9. We endorse the efforts being made to provide the farmer with more adequate credit facilities and urge all local bankers to use the War Finance Corporation as fully as possible during this emergency. As a permanent agency to render similar service in the future, we endorse the Iowa Farm Credit Corporation.

10. We favor amendment to the Federal Reserve act providing for representation on the Federal Reserve Board of agriculture, industry, finance and labor according to their relative importance.

11. We advocate the repeal of the Adamson law and the amendment of the Cummins-Esch law so as to permit the consolidation of the Railway Labor Board with the Interstate Commerce Commission, and protest against the present valuation of the railroads as a basis for rate making.

12. We are in full accord with the movement under way to prevent the

shifting of the tax burden from the railroads of the state onto the owner of farm land, and commend the work of our governor and the Iowa Farm Bureau Federation toward adjusting this matter.

13. We call upon all taxing and public spending bodies in the state to exert the utmost economy with public funds and to hold down tax levies to the lowest figure possible.

14. We give our active support to the campaign being started by the Iowa Farm Bureau Federation, the Illinois Agricultural Association and other organizations looking to a reduction of 20 per cent in the corn acreage in 1922 and the substitution of non-competitive crops such as clover, soybeans and other legumes.

15. We endorse President Harding's proposal for the purchase of ten million bushels of corn for the relief of starving countries abroad.

16. We urge upon congress such measures as will enable the United States to join with Canada in providing us with economical water transportation through the St. Lawrence-Great Lakes waterway project.

17. We express to Professor John M. Evvard our profound regret at his absence from our meeting, our sympathy in his illness, and our best wishes for his prompt recovery.

The President: What will you do with the resolutions, gentlemen?

Motion made, seconded and unanimously carried that the resolutions be adopted.

Motion made, seconded and unanimously carried that copies of these resolutions be sent to all Iowa members of congress.

The President: This brings us up, I believe, to the election of officers, gentlemen. What is your pleasure?

Motion made, seconded and unanimously adopted that the convention proceed to the election of officers.

Officers were elected as follows:

President—A. Sykes of Ida Grove.

Vice president—R. M. Gunn of Buckingham.

Secretary—H. A. Wallace of Des Moines.

Treasurer—Charles Goodenow of Wall Lake.

Directors from even numbered districts—Second district, E. D. Baird of North English; fourth district, Wm. Larrabee of Clermont; sixth district, Charles Cessna of Grinnell; eighth district, George W. Swan of Creston; tenth district, Fred J. Bauer of Paton.

ADDRESS OF A. SYKES,

President of Corn Belt Meat Producers' Association, Before the Agricultural Conference at Washington, Called by Secretary Wallace, Jan. 23, 1922.

Speaking for the farmers and cattle feeders of the corn belt, I wish to say that today they are in worse condition financially than they have ever

been in before. For forty years I have been connected with farming, and I have passed through many panics and depressions, but never have I seen the farmer's purchasing power reduced to its present level. To this conference I can truthfully state that I have never seen such a helpless condition prevailing among such a large percentage of our farmers in the great corn belt as during the past year.

Our present hard condition is not due to any failure to work. Year after year since the war broke out we have produced to the maximum. Our wives, mothers and daughters have worked in the fields as never before.

When the war came to an end, and our sons left the army and the navy to again take up farming, thousands of them started out farming for themselves, buying land, live stock and machinery at the peak prices of 1919 and 1920. Thousands of hard-working tenants whose specialty had been the raising of crops and the feeding of live stock, had saved up a few thousand dollars and had come to a time of life when it was customary to make a payment down on a home of their own. These frugal, industrious men, accustomed to neither war nor speculation, had no reason to believe that they were embarking on a peculiarly hazardous enterprise when they bought a farm of their own with a small payment down. And now, scattered all over the corn belt, are thousands on thousands of these hard-working young farmers who are facing financial ruin. Some are embittered by their unhappy experiences.

Even middle-aged and old farmers who had accumulated a competence before the war broke out, have watched their assets melt away like ice on a summer day. In almost every community one may find stories of such men. They are broken financially and spiritually. They are looking anxiously for renewed hope.

Why is it, they ask, that they now have to pay 400 bushels of corn for a wagon which they used to buy for 150 bushels; or 700 bushels for a binder that used to cost 300 bushels? Why must they pay 350 bushels of corn for a gang plow which formerly cost 125 bushels; or 150 bushels for a suit of clothes which formerly cost 50 bushels; or 33 bushels for the shoes that formerly cost 9 bushels?

The rank and file of the corn belt farmers are fighting against heavy odds. They may have sold their grain and live stock for less than half the cost of production. They may have sold their own labor and the labor of their wives and children at less than 5 cents an hour. But they are still fighting on, and they are thinking more seriously than ever before.

Men who are working ten to fifteen hours a day and facing a situation of this sort day after day want results. From a greatly reduced income they are compelled to pay greatly increased prices for supplies and transportation. They become impatient under the necessity of paying railroad rates 50 per cent above pre-war rates, coal prices 100 per cent above pre-war coal prices, and other prices 50 to 150 per cent above pre-war prices. They read in government reports that persons engaged in other great industries continue to enjoy abnormally high compensation for their services. They want to know if this is necessary, in view of the fact that the cost of food is a chief part of the cost of living, and they do know

that food products as delivered to the markets by the farmers have fallen in prices to near the pre-war level and some important items are far lower.

Farmers in the corn belt want to know why ham is sold at retail throughout the country at about six times the price per pound of live hogs in Chicago, when the normal ratio is about one to three and a half. They believe that a reduction of retail prices of ham and some other food products, to properly correspond with the reductions of prices received by farmers, would do much to stimulate consumption and reduce the surplus stocks and restore normal conditions.

Agriculture is not alone in being depressed. Almost every kind of industry in the corn belt is affected. When farmers can not buy, all others suffer, and this is well illustrated in Iowa at the present time. The feeling of the farmers and many others is shown by their attitude toward county taxes. In many counties the farmers and others are asking the supervisors to make radical cuts in salaries, to spend less on schools and roads. They say these are fine, but if the people have less money, they must cut down expenses.

Steps should be taken immediately to assist farmers who are under obligations to make payments during the next few months. Unless relief is afforded, many will be ruined. It should not be possible to take the farms and homes from honest, industrious, thrifty farmers who are practically sure to pay their way out if given a little more time. Nor is this desirable from any point of view. We must find a way to help these men. Some banks are doing all they can. Communities having such banks are to be congratulated, and these banks deserve commendation. Federal funds now are finding their way to the rural districts, but for some reason their benefits are not reaching large numbers who need such help.

We cannot study the present situation without realizing the need of farmers for longer time loans than have prevailed in the past. The farmer's turnover is slow as compared with manufacturing and business, and a financial system adapted to the latter does not fit the farmer's situation. Just now farmers would be benefited by the storage of a large quantity of corn. It should be stored on the farms where most of it will be used. In each of the last two years the corn crop has been about 300,000,000 bushels in excess of normal. Due to the stress of war the corn acreage was greatly increased. Several millions of acres of corn land should be planted to clover and alfalfa, and this would be done if some of the present corn surplus is stored for use next year. The land needs the leguminous crops and in the long run will produce more and better food crops if allowed to recuperate in this manner. Thus, in the long run, the public would profit if the farmers could finance reasonable storage operations.

Corn belt farmers know that agricultural products make a large part of our exports annually, and that during the past year food products exported have shown a great increase. Our Secretary of Agriculture wisely has undertaken to get information in the foreign markets that will enable us to hold these markets as far as desirable. Such a study means much for American farmers, and Secretary Wallace should be commended for getting it under way so promptly, and he should be given every encouragement by appropriations or otherwise to extend the work as far as he

deems necessary. We need to know the requirements of foreign markets and how well these requirements are being met by other exporting countries, and then we need to perfect our process of growing and manufacturing and marketing, so that we may successfully compete in so far as certain products are concerned—those which we have in surplus for export. This is a challenge to our ability, and our country must not fail to meet it.

It is the duty and the privilege of our government to investigate the causes of the suffering among the farmers of the corn belt and throughout the whole country, and to take measures which will cut short the suffering as far as possible. The situation is most complex. It emphasizes the importance of more knowledge on the economics of agriculture. It involves abnormal relations between prices of farm products and other prices, the handling of an enormous surplus, the better adjustment of supply and demand, the relation between agricultural and other exports, the development of the most efficient production and marketing methods possible, the care of loans maturing at an early date, provision for longer-term agricultural loans, and above all, a better understanding of agriculture, its fundamental character in reference to our national welfare, and its emergency needs at this time.
